MICRO SWITCH Premium Miniature Basic Switches

DESCRIPTION

Honeywell's MICRO SWITCH V7 Series premium miniature basic switches have been designed for long-term reliability, up to 10 million cycles. These switches incorporate a snap-spring mechanism with more than 60 years of proven service and a high strength thermoplastic housing for durability. V7 Series switches are designed with a standard temperature rating of 85 °C (185 °F) or options for a temperature rating up to 175 °C (347 °F).

The switches are available with a single pole double throw (SPDT) or single pole single throw (SPST) contact design. Actuation for the switches includes a wide range of options, which include the pin plunger or an assortment of integral levers with two different lever locations. Design variations of the internal switch mechanism and contact materials permit these switches to reliably control logic level electrical loads from less than 0.1 A to power duty switching up to 25 A. Different styles of electrical terminals solve most installation parameters.

V7 Series miniature basic switches have been certified by CSA, CE and UL for global applications as well as being RoHS compliant. These switches are available through Honeywell's worldwide network.
