# **100mA Low Dropout Voltage Regulator**

# LM2950G

#### FEATURES

- High accuracy output voltage
- Guaranteed 100 mA output
- Very low quiescent current
- Low dropout voltage
- Extremely tight load and line regulation
- Very low temperature coefficient
- Needs Output low-ESR ceramic capacitor for stability
- Logic-controlled electronic shutdown

#### **APPLICATION**

- Battery-powered systems
- Cordless telephones
- Radio-control systems
- Portable / Palm-top / Notebook computers
- Portable consumer equipment
- Portable instrumentation
- Avionics
- Automotive electronics
- SMPS post-regulator
- Voltage reference

### DESCRIPTION

The LM2950G is a low power voltage regulator. This device is an excellent choice for use in battery-powered application such as cordless telephones, radio-control systems, and portable computers.

The LM2950G features a very low quiescent current (75uA typ.) and a very low drop output voltage (typ. 40mV at a light load and 380mV at 100mA).

Furthermore, a tight initial Output voltage tolerance of 0.5% Typ., an extremely good load and line regulation of 0.05% Typical, and a very low output temperature coefficient - all that makes the LM2950G very useful as a low-power voltage reference.

#### ELECTRICAL CHARACTERISTICS (at Ta=25°C, VIN=VOUT+1V, IOUT=100uA, unless otherwise noted)

Note 1 : Output temperature coefficient is defined as the worst case voltage change divided by the total temperature range.

Note 2 : The regulation is measured at a constant junction temperature using pulse testing with a low duty cycle. Changes in the output voltage due to heating effects are covered under the specification for thermal regulation.

Note 3 : The dropout voltage is defined as the input-to-output differential, at which the output voltage drops 100mV below its nominal value measured at 1V differential. At very low values of a programmed output voltage, the minimum input supply voltage 2V (2.3V over temperature) must be taken into account.
