36V, 3.5MHz, 15V/μs Precision Rail-to-Rail Input & OutputOperational Amplifiers

Description

The HT127X series amplifiers are newest high supply voltage amplifiers with low offset, low power and stable high frequency response. They incorporate HTCSEMI proprietary and patented design techniques to achieve very good AC performance with 3.5MHz bandwidth, 15V/μs slew rate and low distortion while drawing only typical 700μA of quiescent current per amplifier. The input common-mode voltage range extends to V–, and the outputs swing rail-to-rail. The HT127X family can be used as plug-in replacements for many commercially available op-amps to reduce power and improve input/output range and performance.The combination of features makes the HT127X ideal choices for industrial control, motor control and portable audio amplification, sound ports, and other consumer audio.
