

## 3.0 A, Step-Down Switching Regulator

### Description

HT2596, HT2596-3.3, HT2596-5.0, HT2596-12 - are monolithic ICs of a step-down DC-DC converters. The principle of operation of ICs is based on control of built-in power NPN transistor, quantity of energy transferred to load is regulated by means of pulse-width modulation. So output voltage practically do not depends from load. ICs are purposed for application inside power supply units of consumer & industrial devices.

Family consist of:

- HT2596 - PWM voltage regulator with adjustable output voltage;
- HT2596-3.3 - PWM voltage regulator with fixed output voltage 3,3V;
- HT2596-5.0 - PWM voltage regulator with fixed output voltage 5,0V;
- HT2596-12 - PWM voltage regulator with fixed output voltage 12,0V;

### Features:

- Output voltage: 3.3V, 5V, 12V and adjustable output version;
  - Adjustable version output voltage range, 1.23V to 37V+4%;
  - Oscillator with build-in capacity for 150Khz switching frequency;
    - PWM control circuit of output voltage;
  - Overheating and current-limit protection ;
  - Switch on/off control circuit;
  - Up to 40V operating voltage
  - Output load current: 3A
  - Standby mode with low power consumption
  - Built-in switching transistor on chip
- IC realized in 5-pin plastic package TO220AR/5 and TO263

**Pin Description Table**

Pin number	Symbol	Purpose description
01	$V_{IN}$	Input (operating voltage)
02	Output	Output
03	GND	Common pin
04	FB	Feedback control pin
05	SD	Switching on/off pin

**Connection Diagrams**

(XX indicates output voltage option.)

**HT2596T**

**HT2596Q**

**HT2596S**

**HT2596Q**

**HT2596M**

\*No Internal Connection

**Block diagramm**

A1 - amplifier;  
 A2 – A4 – comparators;  
 GB1 – battery 200 mV;  
 GB2 – battery 220 mV;  
 R1 - R3 –resistors; VT1,  
 VT2 - transistors

**Recommended mode and Absolute Maximum Ratings**

Parameter, unit	Symbol	Recommended mode		Absolute Maximum Ratings	
		min	max	min	max
Input (operating) voltage, V	$V_{IN}$	4,5	40	-	45
Output voltage relative to GND, V	$V_{OUT}$	-	-	-1,0	-
CD pin input voltage, V	$V_{SD}$	-	-	-0,3	25
Feedback control voltage, V	$V_{FB}$	-	-	-0,3	25
Storage temperature, °C	$T_{stg}$	-	-	-60	150
Junction temperature, °C	$T_j$	-40*	125	-40*	150
Thermal resistance junction-case, °C/W	$R_{th\ j-c}$	-	2,5***	-	2,5***
Thermal resistance junction-ambient, °C/W	$R_{th\ j-a}$	-	65**	-	65**
Thermal resistance junction-ambient (with heat sink), °C/W	$R_{th\ j-a}$	-	28**	-	28**

\* Ambient temperature is indicated

\*\*  $R_{th\ j-a}$  – Thermal resistance junction-ambient (for IC without additional heat sink is equal 65 °C/W, for IC with copper radiator 19 sm<sup>2</sup> the value of parameter is estimated as 28 °C/W).

Thermal resistance junction-ambient  $R_{th\ j-a}$ , °C/W for ICs with additional heat sink is calculated by formula:

$$R_{th\ j-a} = R_{th\ j-c} + R_{th\ c-a} \quad (1)$$

\*\*\* $R_{th\ j-c}$  - thermal resistance junction case, °C/W. (the value of parameter is estimated as 2,5 °C/W);

$R_{th\ c-a}$  - thermal resistance case ambient

Heat sink, application mode (power consumption) and ambient temperature have to provide junction temperature  $T_j \leq 125$  °C.

Maximum dissipation power,  $P_{tot}$ , W, is calculated by formula

$$P_{tot} = (125 - T_A) \cdot R_{th\ j-a} \quad (2)$$

125 – maximum permissible junction temperature, °C

$T_A$  – ambient temperature, °C;

$R_{th(j-a)}$  – thermal resistance junction-ambient, °C/W.

**Electric parameters**
