

+3.3V Low Power Full-Duplex RS-485 Transceivers with 10Mbps Data Rate

The HT3490 and HT3491 devices are +3.3V low power full-duplex transceivers that meet the specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the SP490 and SP491 devices as well as popular industry standards. The HT3490 and HT3491 feature BiCMOS process, allowing low power operation without sacrificing performance. The HT3490 and HT3491 meet the electrical specifications of the RS-485 and RS-422 serial protocols up to 10Mbps under load. The HT3491 is identical to the HT3490 with the addition of driver and receiver tri-state enable lines.

- Full-Duplex RS-485 and RS-422 Transceivers
- Operates from a single +3.3V Supply
- Interoperable with +5.0V logic
- Driver/Receiver Tri-state Enable Lines (HT3491)
- -7V to +12V Common-Mode Input Voltage Range
- +/-200mV Receiver Input Sensitivity
- Allows up to 32 transceivers on the serial bus
- Compatibility with LTC490 and SN75179 (HT3490)
- Compatibility with LTC491 and SN75180 (HT3491)

HT3490

Pin Function HT3490

Pin 1 - Vcc - Positive supply $+3.00V < V_{cc} < +3.60V$

Pin 2 - R - Receiver output

Pin 3 - D - Driver input

Pin 4 - GND - Ground connection

Pin 5 - Y - Non-inverting driver output

Pin 6 - Z - Inverting driver output

Pin 7 - B - Inverting receiver Input

Pin 8 - A - Non-inverting receiver input

HT3491

Pin Function HT3491

Pin 1 - NC - No connect

Pin 2 - R - Receiver output

Pin 3 - REB - Receiver output enable active LOW

Pin 4 - DE - Driver output enable active HIGH

Pin 5 - D - Driver input

Pin 6 - GND - Ground connection

Pin 7 - GND - Ground connection

Pin 8 - NC - No connect

Pin 9 - Y - Non-inverting driver output

Pin 10 - Z - Inverting driver output

Pin 11 - B - Inverting receiver Input

Pin 12 - A - Non-Inverting receiver input

Pin 13 - NC - No connect

Pin 14 - Vcc - Positive supply $+3.00V < V_{cc} < +3.60V$

NOTE 1: The input pulse is supplied by a generator with the following characteristics:

PRR = 250kHz, 50% duty cycle, $t_r < 6.0\text{ns}$, $Z_o = 50\Omega$.

NOTE 2: C_i includes probe and stray capacitance.

The HT3490 and HT3491 are two members in the family of +3.3V low power full-duplex transceivers that meet the electrical specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the SP490 and SP491 devices as well as popular industry standards. The HT3490 and HT3491 feature BiCMOS process allowing low power operation without sacrificing performance.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

Drivers

The drivers for both the HT3490 and HT3491 have differential outputs. The typical voltage output swing with no load will be 0 volts to V_{CC} . With worst case loading of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels. The driver of the HT3491 has a driver enable control line which is active HIGH. A logic HIGH on DE (pin 4) of the HT3491 will enable the differential driver outputs. A logic LOW on the DE (pin 4) will tri-state the driver outputs. The HT3490 does not have a driver enable.

Receivers

The receivers of the HT3490 and HT3491 have differential inputs with an input sensitivity of $\pm 200\text{mV}$. Input impedance of the receivers is typically $15\text{k}\Omega$ ($12\text{k}\Omega$ minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receivers for both the HT3490 and HT3491 are equipped with a fail-safe feature that guarantees the receiver output will be in a HIGH state when the input is left unconnected.

The receiver of the HT3491 has a enable control line which is active LOW. A logic LOW on REB (pin 3) of the HT3491 will enable the differential receiver. A logic HIGH on REB (pin 3) of the HT3491 will tri-state the receiver.
