## Analog Multiplexer Demultiplexer

## High－Performance Silicon－Gate CMOS

The HT4051A analog multiplexer／demultiplexer is digitally controlled analog switches having low ON impedance and very low OFF leakage current．Control of analog signals up to 20 V peak－to－peak can be achieved by digital signal amplitudes of 4.5 to 20 V （if $\mathrm{V}_{\mathrm{CC}}-\mathrm{GND}=3 \mathrm{~V}$ ，a $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}$ of up to 13 V can be controlled；for $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}$ level differences above 13 V a $\mathrm{V}_{\mathrm{CC}}-\mathrm{GND}$ of at least 4.5 V is required）．

These multiplexer circuits dissipate extremely low quiescent power over the full $\mathrm{V}_{\mathrm{CC}}-\mathrm{GND}$ and $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}$ supply－voltage ranges，independent of the logic state of the control signals． When a logic＂ 1 ＂is present at the ENABLE input terminal all channels are off．

The HT4051A is a single 8－channel multiplexer having three binary control inputs， $\mathrm{A}, \mathrm{B}$ and C ，and an ENABLE input．The three binary signals select 1 of 8 channels to be turned on，and connect one of the 8 inputs to the output．
$\square$ Operating Voltage Range： 3.0 to 18 V
$\square$ Maximum input current of $1 \propto \mathrm{~A}$ at 18 V over full package－ temperature range； 100 nA at 18 V and $25^{\circ} \mathrm{C}$
$\square$ Noise margin（over full package temperature range）：
1.0 V min＠ 5.0 V supply

2．0 V min＠ 10.0 V supply
2.5 V min＠ 15.0 V supply

ORDERING INFORMATION
HT4051AN Plastic
HT4051AR SOIC
$\mathrm{T}_{\mathrm{A}}=-55^{\circ}$ to $125^{\circ} \mathrm{C}$ for all packages

MAXIMUM RATINGS＊

| Symbol | Parameter | Value | Unit |
| :---: | :--- | :---: | :---: |
| $\mathrm{V}_{\mathrm{cc}}$ | DC Supply Voltage（Referenced to GND） | -0.5 to +20 | V |
| $\mathrm{VIN}^{2}$ | DC Input Voltage（Referenced to GND） | -0.5 to $\mathrm{V}_{\mathrm{CC}}+0.5$ | V |
| Vout | DC Output Voltage（Referenced to GND） | -0.5 to $\mathrm{V}_{\mathrm{CC}}+0.5$ | V |
| IIN | DC Input Current，per Pin | $\pm 10$ | mA |
| $\mathrm{P}_{\mathrm{D}}$ | Power Dissipation in Still Air，Plastic DIP＋ |  |  |
|  | SOIC Package＋ | 750 | mW |
| $\mathrm{P}_{\mathrm{D}}$ | Dissipation per Output Transistor | 500 |  |
| Tstg | Storage Temperature | 100 | mW |
| $\mathrm{~T}_{\mathrm{L}}$ | Lead Temperature， 1 mm from Case for 10 | -65 to +150 | ${ }^{\circ} \mathrm{C}$ |
|  | Seconds | 260 | ${ }^{\circ} \mathrm{C}$ |
|  | （Plastic DIP or SOIC Package） |  |  |

Maximum Ratings are those values beyond which damage to the device may occur．
Functional operation should be restricted to the Recommended Operating Conditions．
＋Derating－Plastic DIP：－ $10 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ from $65^{\circ}$ to $125^{\circ} \mathrm{C}$
SOIC Package：：－ $7 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ from $65^{\circ}$ to $125^{\circ} \mathrm{C}$

## RECOMMENDED OPERATING CONDITIONS

| Symbol | Parameter | Min | Max | Unit |
| :---: | :--- | :---: | :---: | :---: |
| Vcc | DC Supply Voltage（Referenced to GND） | 3.0 | 18 | V |
| VIIN，Vout | DC Input Voltage，Output Voltage（Referenced to <br> GND） | 0 | $\mathrm{~V}_{\mathrm{cc}}$ | V |
| $\mathrm{T}_{\mathrm{A}}$ | Operating Temperature，All Package Types | -55 | +125 | ${ }^{\circ} \mathrm{C}$ |
| I | Multiplexer Switch Input Current Capability | - | 25 | mA |
| Roн | Output Load Resistance | 100 | - | $\Omega$ |

In certain applications，the external load－resistor current may include both $\mathrm{V}_{\mathrm{CC}}$ and signal－line components．

This device contains protection circuitry to guard against damage due to high static voltages or electric fields．However，precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high－impedance circuit．For proper operation， $\mathrm{V}_{\mathrm{IN}}$ and $\mathrm{V}_{\text {OUT }}$ should be constrained to the range $\mathrm{GND} \leq\left(\mathrm{V}_{\text {IN }}\right.$ or $\left.\mathrm{V}_{\text {OUT }}\right) \leq \mathrm{V}_{\text {CC }}$ ．

Unused digital pins must be tied to an appropriate logic voltage level（e．g．，either GND or $\mathrm{V}_{\mathrm{CC}}$ ）．Unused Analog I／O pins may be left open or terminated．
