Note: The operational current represents the classification by making and breaking currents (IEC 60947-5-1). Minimum applicable load: 3V AC/DC, 5 mA (applicable range may vary with operating conditions and load types) For mono-levers and cam switches, see pages 43 and 46.

BS (BST) Contact Block

Contact Block Types

		Single-pole Contact Block Type				
Contac	t					
		1NO	1NC	1NO (early make)	1NC (late break)	
Time	BS	BS010E	BS001E	BS010SE	BS001SE	
Type	BST	BST010	BST001	BST010S	BST001S	
Push Rod		Green	Red	Black	White	

BST contact blocks are used for the following control units and are not interchangeable with BS contact blocks.

(The BS housing is dark gray and the BST housing is light gray.)

- Pushlock turn reset and push turn lock switches
- LED illuminated pushbuttons
- LED/incandescent illuminated selector switches
- All models of diecast zinc housing control units
- Durable nylon 66 housing has a high resistance against alkalis.
- · Silver contacts.
- Up to four blocks in two layers can be mounted onto each operator.

 Square twin:
 Selector switch with lever:
 So mm minimum
 So mm minimum
 So mm minimum
 So mm minimum

☆ The 4.8 mm recess is for preventing rotation and is not necessary when the nameplate or anti-rotation ring is not used.

Note: For mounting hole layout of pushbuttons, mono-lever switches, and cam switches, see each section.

Ordering Information

Standard Units

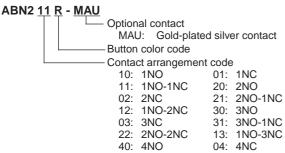

- Specify an operator or lens color code in the Type No.
- · Black, green, and red buttons are included with flush push-
- Full voltage type illuminated units are not supplied with a lamp. Order LED or incandescent lamps separately. Transformer and DC-DC converter type illuminated units contain an LED or incandescent lamp.
- Terminal covers, nameplates, and accessories are ordered separately.

Terminal Cover

• When a terminal cover is required, order an applicable terminal cover referring to page 55.

The Type No. development charts shown below can be used to specify control units other than those listed on the following pages. Gold-plated silver contacts are also available.

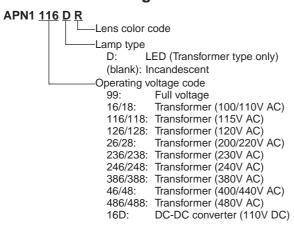

ø30 Series Pushbuttons

Note:

- Mushroom pull type ATN23 can have a maximum of two contact
- Mushroom push-pull return type ATN22 cannot have only NO or only NC contacts.
- No other contact configurations are available for square twin type UWQN1 than those specified in this catalog.

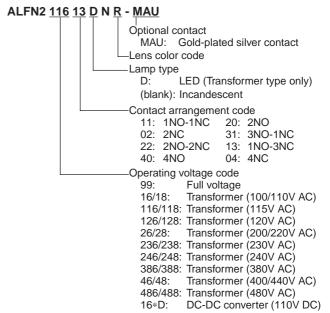

ø30 Series Pilot Lights

Note:

- Full voltage type is not supplied with a lamp.
- Transformer and DC-DC converter types contain an LED lamp (LSTD-62) or LETD-62) or incandescent lamp (LS-6, 1W or LE-8,
- LED lamps cannot be used on 480V AC transformers.
- DC-DC converter is available with LED lamps only.
- Operating voltage codes 18, 118, 128, 28, 238, 248, 388, 48, and 488 are available for incandescent types only.

ø30 Series Illuminated Pushbuttons

Note:

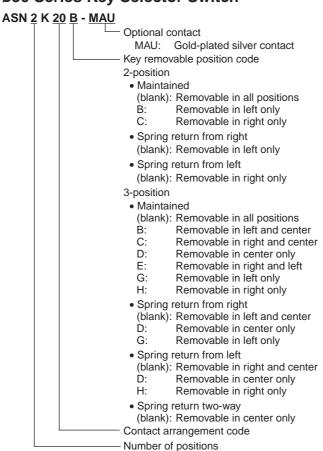

- Illuminated pushbuttons cannot have an odd number of contact blocks, such as 1NO, 1NC, 3NO, 2NO-1NC, 1NO-2NC, and 3NC.
- Transformer and DC-DC converter types contain an LED lamp (LSTD-62) or LETD-62) or incandescent lamp (LS-6, 1W or LE-8,
- LED lamps cannot be used on 480V AC transformers.
- DC-DC converter is available with LED lamps only.
- Operating voltage codes 18, 118, 128, 28, 238, 248, 388, 48, and 488 are available for incandescent types only.

ø30 | ø30 Series Control Units (Ordering Information)

ø30 Series Selector Switch

ASN 2 L 11 - MAU Optional contact MAU: Gold-plated silver contact Contact arrangement code Operator type (blank): Knob Lever Number of positions

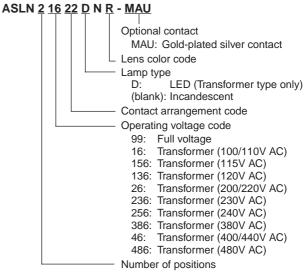

ø30 Series Key Selector Switch

Note:

• The key cannot be removed in the return position.

ø30 Series Illuminated Selector Switch

Note:

- Full voltage type is not supplied with a lamp.
- Transformer type contain an LED lamp (LSTD-62) or incandescent lamp (LS-6, 1W).
- LED lamps cannot be used on 480VAC transformers.

- Specify a button color code in place of ① in the Type No.
- Round bezel (metal): Chrome-plated
- Cylinder (metal): Chrome-plated
- Other contact arrangements and gold-plated silver contacts are also available. See page 11.
- Pushlock Turn Reset: Button is maintained when pressed and is reset when turned clockwise. Red buttons only.

Note: AVN3 pushlock turn reset switches cannot be used as emergency stop switches. When emergency stop switches are required, use the HN1E series emergency stop switches (ISO 13850 and IEC 60947-5-5 compliant).

- Pushlock Key Reset: Button is maintained when pressed and is reset with a key. Key is removable from both depressed and reset positions. Two keys are supplied.
- Push Turn Lock: Button is locked when turned clockwise in the depressed position and is reset when turned counterclockwise.
- Key ON/OFF Lock: Button can be locked in both depressed and reset positions.
- Toggle Lever: ON and OFF are indicated on the cap.

- Round bezel (metal): Chrome-plated
- Other contact arrangements and gold-plated silver contacts are also available. See page 11.
- Square Twin (Momentary): Two independent momentary switches are contained in one unit, each operated by ON or OFF button. With the ø30 adapter removed form the sleeve, the unit can mount in a ø25.5mm mounting hole for the ø25 series.
- Square Twin (Maintained): The contact operates when ON button is pressed and is maintained in the depressed position. The button is reset by pressing the OFF button.
- Twin Maintained: The contact operates when the top button is pressed and is maintained in the depressed position. The button is reset by pressing the bottom button.

 Different combinations of flush, extended buttons, and colors are available (ABN1B-*, ABN2B-*). See page 61.

Mushroom buttons for the ABBN33 are ordered separately. Specify the color code (ABN3B-*). See page 61.

• Rectangular Full Voltage Type **UPQN4**

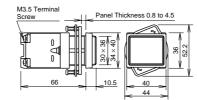

• Rectangular Full Voltage Type **UPQNE4**

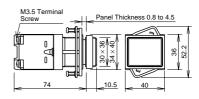

- Square Transformer Type
- Square DC-DC Converter Type UPQN3B

- Rectangular Transformer Type
- Rectangular DC-DC Converter Type UPQN4

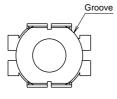

- Rectangular Transformer Type
- Rectangular DC-DC Converter Type **UPQNE4**

All dimensions in mm.

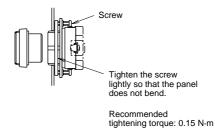

Reflector

- 1. The lamp housing of the square type LED illuminated pilot lights has a built-in reflector.
- 2. Make sure that the reflector does not fall off when removing the lens or marking plate.
- 3. When replacing the LED lamp of UPQNE4 (rectangular) type, use a lamp holder tool (OR-55).
- 4. To remove the reflector, insert a flat screwdriver inside the groove of the reflector and lightly push out.

Panel Mounting

- 1. Tighten the square ring to the operator and position the ring correctly.
- 2. Lightly tighten the screw to secure the pilot light onto the panel.

Push-to-Check Types (1W) **Incandescent**

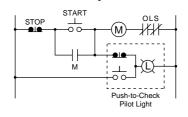

Shape	Lamp	Input Type	Lamp Receptacle	Type No.	② Lens/LED Color Code	Applicable Lamp
Push-to-Check APN1*P	Without Lown	Full \/oltogo	BAGE	A DNI400D@		1.0 (4)(4)
Incandeso	Without Lamp F	Full Voltage	BA9S	APN199P@	C: clear G: green O: orange	LS (1W)
	Incandescent	Transformer	BA9S	APN13P2	R: red S: blue W: white	LS-6 (1W)

• Operating Voltage Code
Specify an operating voltage code in place of ③ in the Type No.

3	③ Operating Voltage Code					
16:	100/110V AC					
116:	115V AC					
126:	120V AC					
26:	200/220V AC					
236:	230V AC					
246:	240V AC					
386:	380V AC					
46:	400/440V AC					
486:	480V AC					

- Specify a lens color code in place of @ in the Type No.
- Full voltage types do not contain a lamp. Order incandescent lamps separately. For lamps, see page 63.
- Transformer types contain an incandescent lamp: LS-6 (1W, 6V AC/DC).

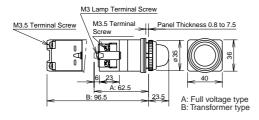

Circuit Example

Note: The lamp of push-to-check pilot light is not connected to the contact terminal. To connect, refer to the diagram on the left.

Mounting Hole Layout

ø30 ARN/ARNS series Mono-lever Switches

Single lever offers up to four directions of control

Mono-lever switches operate in four directions using a single lever. Switch contacts are actuated in the direction in which the lever is pushed, enabling quick and accurate control in any desired direction. Ideal for machine tools and industrial machines. The lever action can be maintained or spring-returned in any combination.

Also available with interlock mechanism to prevent inadvertent actuation.

Operating Temperature	-25 to +50°C (no freezing)
Operating Humidity	45 to 85% RH (no condensation)
Lever Knob	Black

BR Contact Block

The contact block is made of nylon resin. Each contact block contains two pairs of double-break silver contacts. There are three types as shown in the diagram below and up to four contact blocks can be mounted in any direction. A wide variety of circuits allows diverse combinations of control.

Control Mechanism

When the operator lever is pushed to about 30° in each direction from the neutral position, the contact in that direction activates. The lever can operate in two, three, or four directions, and combinations of maintained or spring-return from any position are possible.

ø30/ø25 CS Series Cam Switches

76 standard circuits to choose from

- Wide variety of heavy-duty oiltight cam switches
- Operators available up to 12 positions
- Switches made with a double-pole contact block
- Contact blocks rated at 600V, 10A
- Ideal for ammeter/voltmeter applications
- UL listed and CSA approved

Installing the Terminal Cover for the CS series Cam Switches

- Complete wiring before installing the terminal cover on the bottom plate of the contact block.
- The terminal cover has six holes. Of the four round holes at four corners, use two diagonal pair of holes to install the terminal cover. Either pair can be used.
- Insert the attached self-tapping screws into the pair of holes and tighten the screws to a torque of 0.8 to 1.0 N·m.
- For 1 through 3 decks of contact blocks, use terminal cover CS-VL2-13S.
- For 4 through 6 decks of contact blocks, use terminal cover CS-VL2-46S.
- The CS-VL2-46S consists of the CS-VL2-13S and a terminal cover for the fourth through sixth decks. Combine the two parts together as shown. Note that once combined, the two parts cannot be separated.

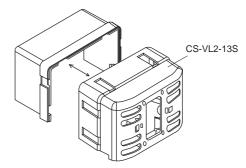

For 1 through 3 decks of contact blocks (CS-VL2-13S)

Minimum Mounting Centers for Installing the Terminal Cover

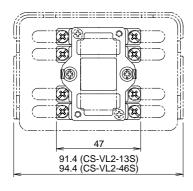

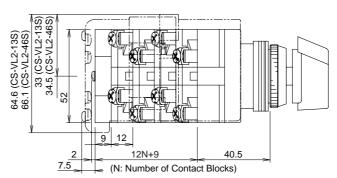

Although the minimum mounting centers are 100 mm horizontally and 70 mm vertically, determine the mounting centers in consideration of convenience of wiring. For the P2 handle, the minimum mounting centers are 125 mm horizontally and vertically.

For 4 through 6 decks of contact blocks (CS-VL2-46S)

Terminal Cover Dimensions

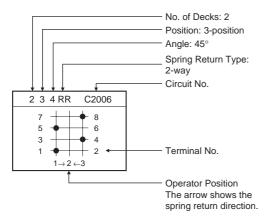

All dimensions in mm.

Standard Contact Arrangements

- The following table lists 76 standard contact arrangements for easy designation of required cam switch operation.
- When other contact arrangements are required, specify the number of contact block decks, operator positions, angles, and contact operation using the Custom Contact Arrangement Specification Sheet on page 54.

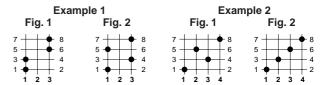

Symbol	Contact Operation
•	Contacts closed.
-	Contacts remain closed between two operator positions.
++	Overlapping Contacts Contacts of different decks are both closed at one point while the handle is turned to the next position.
0	Residual Contacts When the handle is returned to the center, the contacts remain closed. The contacts are opened when the handle is turned to the opposite direction.

• Listing Order of the Table

The 76 standard contact arrangements are listed in the order of the circuit number.

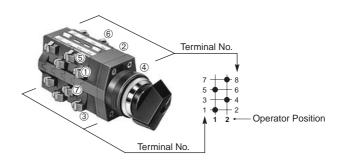

Same Circuits

Shown in the following examples, circuits of Fig. 1 and Fig. 2 have the same functions. When ordering, examine the standard contact arrangements. Your requirements may be satisfied simply by changing external wiring of the standard contact arrangments.

• Terminal Numbers

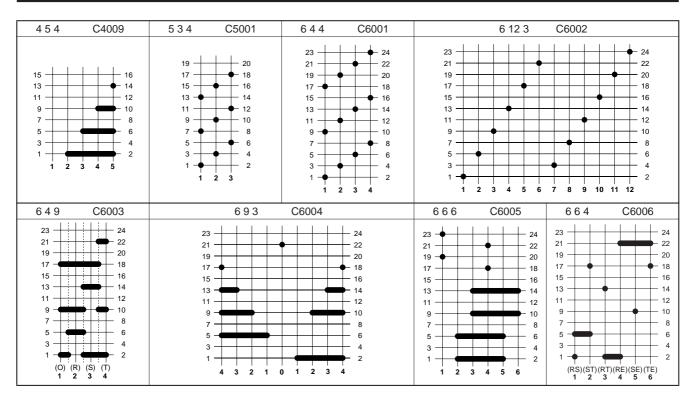

The terminal numbers on the contact blocks correspond with the numbers shown in the chart as shown below.

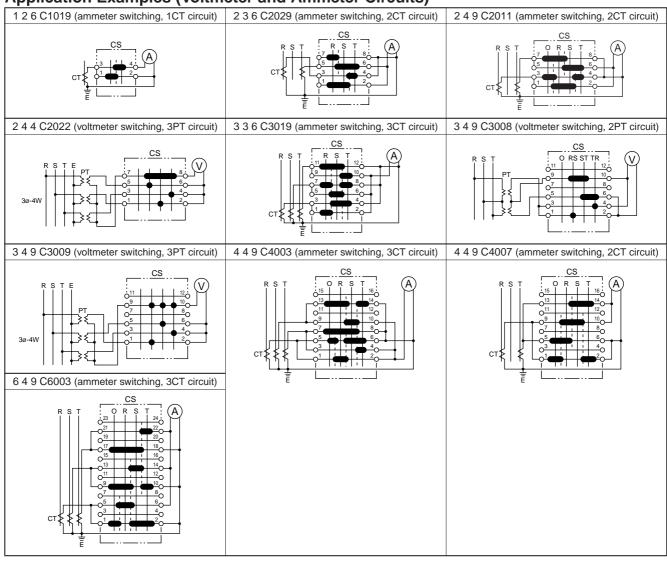

Standard Contact Arrangement Chart

Application Examples (Voltmeter and Ammeter Circuits)

Custom Contact Arrangement Specification Sheet

- The preceding pages provide 76 standard contact arrangements. When other contact arrangements are required, specify the number of contact block decks, operator positions, angles, and contact operation using the Custom Contact Arrangement Specification Sheet shown below.
- For available number of contact blocks and operator positions, see the Ordering Information on page 48.
- 1. Specify operator positions

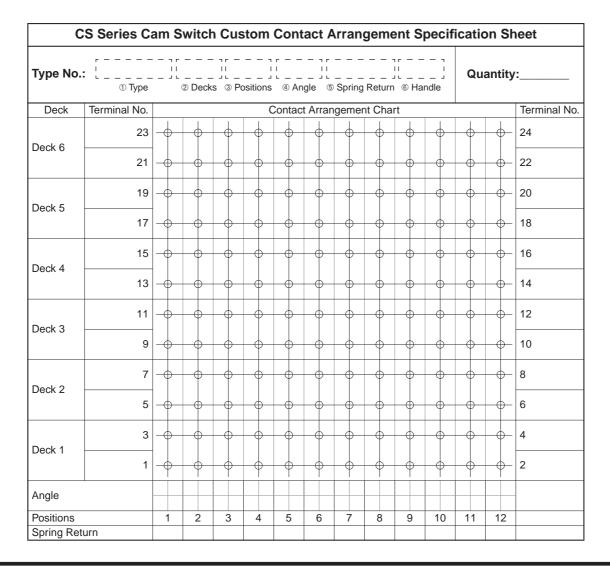

Indicate the operator positions starting at the first position. When spring return operation is required, mark an arrow between two operator positions to indicate the spring return direction.

2. Specify contact operation at each operator position Indicate the required operation of all contacts at each operator position using the following symbols.

Symbol	Contact Operation
•	Contacts closed.
-	Contacts remain closed between two operator positions.
+++	Overlapping Contacts Contacts of different decks are both closed at one point while the handle is turned to the next position. Overlapping contacts are not available for handle angles of 30° and 45°.
0	Residual Contacts When the handle is returned to the center, the contacts remain closed. The contacts are opened when the handle is turned to the opposite direction.

 One deck of contact block contains two poles of contacts and four terminals. When the handle is made to turn 180° or more, special attention is needed. Since one cam operates the two poles of contacts on opposite positions, the same contact operation repeats on the other pole of contacts when the handle is turned 180°. When different contact operation is needed for handle angles of 180° or more, use another deck of contact block.

Transformer

Separate Mounting Type	Primary Voltage	Secondary Voltage	Type No.	Applicable Load
For 1W	100/110V AC	5.5V	TWR516	One full voltage type pilot light or illuminated
	200/220V AC		TWR526	switch containing LSTD-6©, LETD-6© LED lamp (6V AC/DC) or LS-6 incandescent
	400/440V AC		TWR546	lamp (6.3 V AC/DC, 1W)
For 2W	100/110V AC		TWR518	
	200/220V AC	15V	TWR528	One full voltage type pilot light or illuminated switch containing LE-8 incandescent lamp (18V AC/DC, 2W)
	400/440V AC		TWR548	,

Safety Precautions

- Turn off the power to the ø30 series control units before starting installation, removal, wiring, maintenance, and inspection of the products. Failure to turn power off may cause electrical shocks or fire hazard.
- To avoid a burn on your hand, use the lamp holder tool when replacing lamps.
- For wiring, use wires of a proper size to meet the voltage and current requirements. Tighten the M3.5 terminal screws to a tightening torque of 1.0 to 1.3 N·m. Failure to tighten terminal screws may cause overheat and fire.

Instructions

Panel Mounting for Square Pushbuttons and Pilot Lights

- 1. Tighten the square ring to the operator and position the ring correctly.
- 2. Lightly tighten the screw to secure the pilot light onto the

Tightening Torque for Terminal Screws

Tighten the terminal screws to a torque of 1.0 to 1.3 N·m.

Replacement of Lamps

Lamps can be replaced by using the lamp holder tool (OR-55) from the front of the panel.

How to Remove

To remove, slip the lamp holder tool onto the lamp head lightly. Then push slightly, and turn the lamp holder tool counterclockwise.

How to Install

To install, insert the lamp head into the lamp holder tool. Place the pins on the lamp base to the grooves in the lamp socket. Inset the lamp and turn it clockwise.

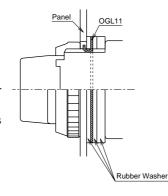

Installing the Anti-rotation Ring

Anti-rotation rings are used on selector switches or pushbuttons which rotate and used when using no nameplates.

Insert a 1.5mm thick rubber washer between the panel and the anti-rotation ring as shown on the right.

Panel Thickness and Rubber Washer

Adjust the thickness of the rubber washers according to the panel thickness. Also, make sure to include the nameplate thickness when using a nameplate.

Installation of LED Illuminated Units

1. Note the polarity for wiring when connecting to DC-DC converter unit.

Terminal No.	Polarity
X1	Positive
X2	Negative

- 2. Transformer type units are recommended for use in areas subjected to noise.
- 3. Notes for Pure White LED Lamps
- Do not use the pure white LED outdoors, otherwise it will lead to the degradation of brightness and color. Do not remove or apply shock to the cap on the pure white LED lamp, otherwise it may break or damage the cap.
- For the pure white LED, use a white lens. The illumination color will be dull if a different color is used.

Notes on LED Illuminated Units

LED lamps consist of semiconductors. If the applied voltage exceeds the rated voltage, LED elements may deteriorate due to overheat, resulting in significant decrease in luminance, hue change, or failure of lighting. Also, if an extraneous noise, transient voltage, or transient current is applied to the circuit, similar effects may occur. When using LED lamps, observe the following instructions.

Rated Voltage

The LED lamps are rated at 6V, 12V, or 24V AC/DC, and can be used within ±10% the rated voltage of either AC or DC.

DC Power

- 1. Switching power supply Regulated voltage from switching power supply is best suited. Make sure to use within the rated voltage of the LED lamp.
- 2. Rechargeable battery

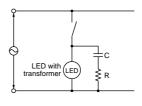

Note that the battery voltage may exceed the rated voltage of the LED lamp while the battery is being charged and immediately after the charging is complete. Be sure to use the LED lamp on a voltage of ±10% the rated voltage.

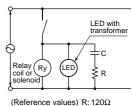

- 3. Full-wave rectification
 - Since the LED lamp is AC/DC compatible, a diode bridge for rectification is not necessary. If the LED lamp is used on a full-wave rectification current through a diode bridge, the rectifier diodes will reduce the voltage, resulting in lower luminance.
- 4. Single-phase half-wave rectification This is not suitable for the power source of LED lamps. Use constant-voltage DC power.

Noise

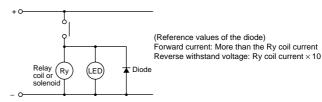

LED elements deteriorate due to extraneous noise, resulting in significant decrease in luminance, hue change, or failure of lighting. When such effects are anticipated, take a protection measure shown below, such as RC elements or a surge absorber.

[Protection Example 1] For AC circuit

[Protection Example 2] For DC circuit

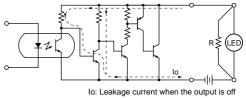

Countermeasures against Dim Lighting

- 1. Leakage currents through the transistors or a contact protection circuit may cause the LED lamp to illuminate dimly even when the output is off.
- 2. When the LED lamp is illuminated by a transistor output, take the following measure.

[Circuit Example]

Connect shunt resistor R in parallel with the LED lamp.

R: Shunt resistor

Note: BST contact blocks are not interchangeable with dark gray BS contact blocks used for ø30 control units.

Specifications, ratings, and mounting hole layouts are the same as ø30 control units. See "ø30 Series Control Units" on page 7.

Ordering Information

Standard Units

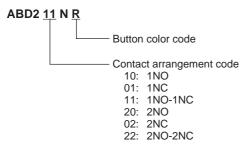

- Specify an operator or lens color code in the Type No.
- Black, green, and red colored buttons are included with flush pushbuttons.
- Full voltage type illuminated units are not supplied with a lamp. Order LED or incandescent lamps separately. Transformer type illuminated units contain an LED or incandescent lamp.
- Terminal covers, nameplates, and accessories are ordered separately.

Terminal Cover

• When a terminal cover is required, order an applicable terminal cover referring to page 55.

The Type No. development charts shown below can be used to specify control units other than those listed on the following

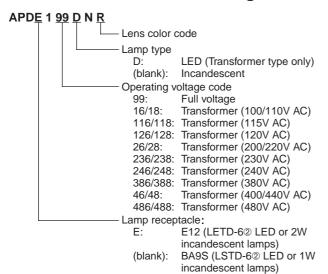

ø30 Series Diecast Zinc Pushbuttons

Note:

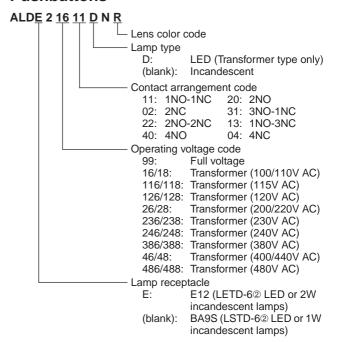

- Mushroom pull type AZD3 can have a maximum of two contact
- Mushroom push-pull type AYD31 can have a maximum of two contact blocks.

ø30 Series Diecast Zinc Pilot Lights

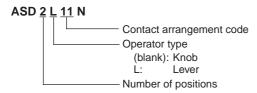

- Full voltage type is not supplied with a lamp.
- Transformer types contain an LED lamp (LSTD-6@ or LETD-6@) or incandescent lamp (LS-6, 1W or LE-8, 2W).
- LED lamps cannot be used on 480V AC transformers.
- Operating voltage codes 18, 118, 128, 28, 238, 248, 388, 48, and 488 are available for incandescent types only.

ø30 Series Diecast Zinc Illuminated **Pushbuttons**

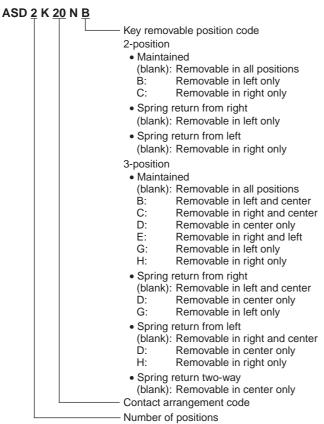

- Illuminated pushbuttons cannot have an odd number of contact blocks, such as 1NO, 1NC, 3NO, 2NO-1NC, 1NO-2NC, and
- Full voltage type is not supplied with a lamp.
- Transformer types contain an LED lamp (LSTD-62) or LETD-62) or incandescent lamp (LS-6, 1W or LE-8, 2W).
- LED lamps cannot be used on 480V AC transformers.
- Operating voltage codes 18, 118, 128, 28, 238, 248, 388, 48, and 488 are available for incandescent types only.

ø30 Series Diecast Zinc Selector Switch

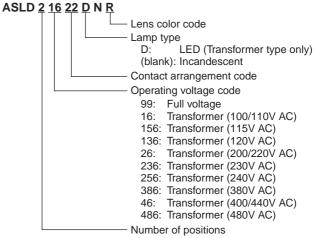

ø30 Series Diecast Zinc **Key Selector Switch**

Note:

• The key cannot be removed in the return position.

ø30 Series Diecast Zinc **Illuminated Selector Switch**

Note:

- Full voltage type is not supplied with a lamp.
- Transformer type contains an LED lamp (LSTD-62) or incandescent lamp (LS-6).
- LED lamps cannot be used on 480V AC transformers.

- Specify a button color code in place of ① in the Type No.
- Ring/Lever (Metal): Chrome-plated

- 1. Circuit Code G: The pushbutton does not operate when the ring or lever operator is turned to the right position.
- 2. Circuit Codes E and F: The right and left NC contact blocks on circuit code E or F may overlap each other while turning the ring or lever operator. The NO and NC contact blocks on circuit code F may overlap each other while pressing the button.
- 3. When using the selector pushbutton, do not turn the ring or lever operator with the pushbutton depressed. Otherwise, damage or failure may be caused.
- 4. When installing the lever operator, make sure that the lever is not in the horizontal position. Otherwise, shock resistance may be degraded.

❸ Color Insert	Color Insert	•	TW-HC1①	TW-HC1①PN05	5	Specify a color code in place of ①. B (black), G (green), R (red), S (blue), W (white), Y (yellow)

Safety Precautions

- Turn off the power to the ø30 diecast zinc control units before starting installation, removal, wiring, maintenance, and starting installation, removing, wiring, maintenance, and inspection of the products. Failure to turn power off may cause electrical shocks or fire hazard.
- To avoid a burn on your hand, use the lamp holder tool when replacing lamps.
- For wiring, use wires of a proper size to meet the voltage and current requirements. Tighten the M3.5 terminal screws to a tightening torque of 1.0 to 1.3 N·m. Failure to tighten terminal screws may cause overheat and fire.

Instructions

Tightening Torque for Terminal Screws

Tighten the M3.5 terminal screws to a torque of 1.0 to 1.3 N·m.

Replacement of Lamps

Lamps can be replaced by using the lamp holder tool (OR-55) from the front of the panel.

• How to remove

To remove, slip the lamp holder tool onto the lamp head lightly. Then push slightly, and turn the lamp holder tool counterclockwise.

How to install

To install, insert the lamp head into the lamp holder tool. Place the pins on the lamp base to the grooves in the lamp socket. Inset the lamp and turn it clockwise.

Installation of LED Illuminated Units

• When using full voltage type LED illuminated units, provide protection against electrical noise, if necessary. See page 65 for notes on LED illuminated units.
