HS5E Miniature Interlock Switches with Solenoid

Spring Lock Type Features:

- · Automatically locks the actuator without power applied to the solenoid
- After the machine stops, unlocking is completed by the solenoid, providing high safety features
- Manual unlocking is possible in the event of power failure or maintenance
- Gold-plated contacts

Solenoid Lock Type Features:

- The actuator is locked when energized
- The actuator is unlocked when de-energized
- Flexible locking function can be achieved for an application where locking is not required and sudden stopping of machine must be prevented
- Gold-plated contacts

Specifications

Conforming Standards	ISO14119, IEC60947-5-1, EN60947-5-1 (TÜV approval), EN1088, GS-ET-19 (BG approval), UL508, CSA C22.2, No. 14, GB 140485.5 (CCC approval) IEC60204-1/EN60204-1				
Application Standards	IEC60204-1/EN60204-1				
Operating Temperature	-25 to 50°C (no freezing)				
Relative Humidity	45 to 85% (no condensation)				
Storage Temperature	-40 to +80°C (no freezing)				
Operating Environment	Degree of pollution: 3				
Impulse Withstand Voltage	2.5 kV (between LED, solenoid and grounding: 0.5 kV)				
Insulation Resistance (DC megger)	Between live and dead metal parts: 100 M Ω minimum Between live metal part and ground: 100 M Ω minimum Between live metal parts: 100 M Ω minimum Between Terminals of the same pole: 100 M Ω minimum				
Electric Shock Protection Class	Class II (IEC61140)				
Degree of Protection	IP67 (IEC60529)				
Shock Resistance	Operating extremes: 100 m/s ² (10 G) Damage limits: 1000 m/s ² (100 G)				
Vibration Resistance	Operating extremes: 10 to 55 H, amplitude 0.35 mm minimum Damage limits: 30 Hz, amplitude 1.5 mm minimum				
Actuator Operating Speed	0.05 to 1.0m/s				
Direct Opening Travel	Actuator HS9Z-A51: 11mm minimum Actuator HS9Z-A52/A53/A55: 12mm minimum				
Direct Opening Force	80N minimum				
Actuator Retention Force	1400N minimum (GS-ET-19)				
Operating Frequency	900 operations per hour				
Mechanical Life	1,000,000 operations minimum (GS-ET-19)				
Electrical Life	100,000 operations minimum (operating frequency 900 operations per hour, rated load AC-12, 250V, 1A)				
Conditional Short-circuit Current	50A (250V) (Note: Use 250V/10A fast acting type fuse for short circuit protection.)				
Cable	21AWG - 8-core: 0.5mm ² or equivalent/core (HS5E-V types: No. 22AWG - 12-core :0.3mm ² on equivalent/ core)				
Cable Diameter	ø7.6 mm				
Weight (approx.)	400g - 1m cable type, 580g - 3m cable type, 760g - 5m cable type

Solenoid Locking Safety Switches

Actuator Mounting Reference Position

As shown in the figure on the right, the mounting reference position of the actuator when inserted in the interlock switch is where the actuator stop placed on the actuator lightly touches the interlock switch.

Note: After mounting the actuator, remove the actuator stop from the actuator.

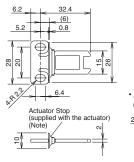

XW Series E-Stops

When mounted (5)

15.8

 When the mounting center distance is set to 20 mm, the actuator swings vertically. Adjust the distance by moving the rubber bushings

Swinc

Actuator Orientation

The orientation of actuator swing (horizontal/vertical) can be changed using the orienting insert (white plastic) installed on the back of the actuator. Do not lose the orientating insert, otherwise the actuator will not swing properly.

Operation Characteristics (reference)

Note: Actuator can be unlocked manually for confirming the door movement before wiring and energizing, and also for emergency situation such as power failure.

The operation characteristics shown in the chart above are of the HS9Z-A51. For other actuator types, add 1.3 mm.

The operation characteristics show the contact status when the actuator enters the entry slot of an interlock switch.

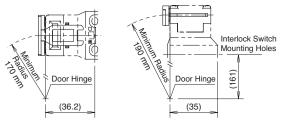

Operating Instructions

Minimum Radius of Hinged Door

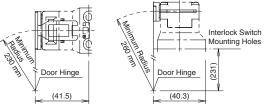

- When using the interlock switch for a hinged door, refer to the minimum radius of doors shown below. For the doors with small minimum radius, use angle adjustable actuators (HS9Z-A53 or HS9Z-A55).
 - Because deviation or dislocation of hinged door may occur in actual applications, make sure of the correct operation before installation.

HS9Z-A52 Actuator

When the door hinge is on the extension line of the interlock switch surface:

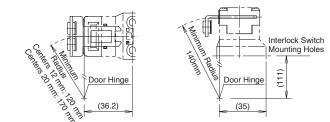

When the door hinge is on the extension line of the actuator mounting surface:

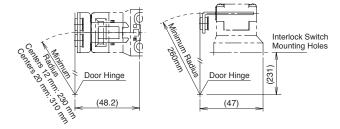

HS9Z-A52 Actuator (w/rubber bushings)

When the door hinge is on the extension line of the interlock switch surface:

When the door hinge is on the extension line of the actuator mounting surface:

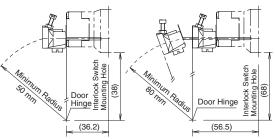

Actuator Angle Adjustment

- Using the angle adjustment screw, the actuator angle can be adjusted (refer to the dimensional drawing on pagepage 330).
 Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not move.

When using the HS9Z-A53 Angle Adjustable (vertical) Actuator

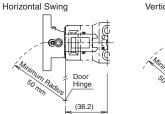

When the door hinge is on the extension line of the interlock switch surface: 50 mm

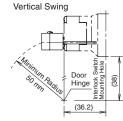

When the door hinge is on the extension line of the actuator mounting surface: 80 mm

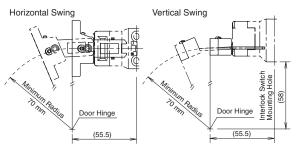

When using the HS9Z-A55 Angle Adjustable (vertical/horizontal) Actuator

When the door hinge is on the extension line of the interlock switch surface: 50 $\ensuremath{\mathsf{mm}}$

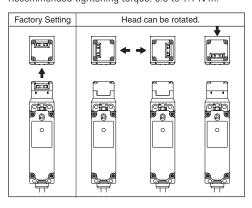

When the door hinge is on the extension line of the actuator mounting surface: 70 mm

Rotating the Head

The head of the HS5E can be rotated by removing the four screws from the corners of the HS5E head and reinstalling the head in the desired orientation. Before wiring the HS5E, replace the head if necessary. Before replacing the head, turn the manual unlock to the UNLOCK position using the manual unlock key. When reinstalling the head, make sure that no foreign object enters the interlock switch. Tighten the screws tightly, without leaving space between the head and body, otherwise the interlock switch may malfunction. Recommended tightening torque: 0.9 to 1.1 N·m.

Overview

Instructions, continued

For Manual Unlocking Spring lock type

The HS5E allows manual unlocking of the actuator to pre-check proper door movement before wiring or turning power on, as well as for emergency use such as a power failure.

Solenoid lock type

The solenoid lock type interlock switch normally does not need the manual unlock. However, only when the interlock switch would not release the actuator even though the solenoid is de-energized, the interlock switch can be unlocked manually. Unlock the interlock switch manually only when the solenoid is de-energized. Do not unlock the interlock switch manually when the solenoid is energized.

Manual Unlocking Position

When locking or unlocking the interlock switch manually, turn the key fully using the manual unlock key supplied with the interlock switch.

Using the interlock switch with the key not fully turned (less than 90°) may cause damage to the interlock switch or operation failures (when manually unlocked, the interlock switch will keep the main circuit disconnected and the door unlocked).

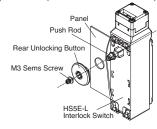

Do not apply excessive force to the manual unlock, otherwise the manual unlock will become damaged.

Do not leave the manual unlock key attached to the interlock switch during operation. This is dangerous because the interlock switch can always be unlocked while the machine is in operation.

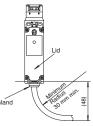

Installing the Rear Unlocking Button

After installing the interlock switch on the panel, place the rear unlocking button (supplied with the switch) on the push rod on the back of the interlock switch, and fasten the button using the M3 sems screw. Rear unlocking button can be installed alone when the total thickness of mounting frame and panel is 6 mm or less. When the total thickness of mounting frame, panel, and mounting plate is 23 to 43 mm, use the rear unlocking button kit (HS9Z-FL53 or HS9Z-FL54) sold separately.

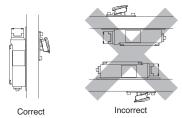

Cables

- When bending the cable during wiring, make sure that the cable radius is kept at 30 mm minimum.
- · Solenoid has polarity. Be sure of the correct polarity when wiring.

Safety Precautions

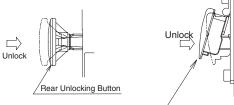

Install the rear unlocking button kit in the correct direction as shown below. Do not install the kit in incorrect directions, otherwise malfunction will be caused.

Do not apply strong force exceeding 100 m/s2 to the interlock switch while the rear unlocking button is not pressed, otherwise malfunction will be caused.

Manual Unlocking using the Rear Unlocking Button

The rear unlocking button is used by the operator confined in a hazardous area for emergent escape.

Rear Unlocking Button

How to operate

When the rear unlocking button is pressed, the interlock switch is unlocked and the door can be opened.

To lock the interlock switch, pull back the button.

When the button remains pressed, the interlock switch cannot be locked even if the door is closed, and the main circuit remains open.

Recommended Tightening Torque

- HS5E interlock switch: 1.8 to 2.2 N·m (four M4 screws) (Note)
- Rear unlocking button: 0.5 to 0.7 N·m
- Rear unlocking button kit: 4.8 to 5.2 N·m (M5 screw)

Actuators

HS9Z-A51:	1.8 to 2.2 N·m (two M4 screws)
HS9Z-A52:	0.8 to 1.2 N·m (two M4 Phillips screws)
HS9Z-A51A/A52A:	1.0 to 1.5 N⋅m (two M4 screws)
HS9Z-A53:	4.5 to 5.5 N·m (two M6 screws)
HS9Z-A55:	1.0 to 1.5 N·m (two M4 screws)

Note: The above recommended tightening torque of the mounting screws are the values with hex socket head bolts. When other screws are used and tightened to a smaller torque, make sure that the screws do not become loose after mounting.

Wire Identification

Wires can be identified by color and a white line printed on the wire.

- HS5E-V: Wires of gray and gray/white insulation cannot be used.
- HS5E-DD: Wires of brown and brown/white insulation cannot be used.

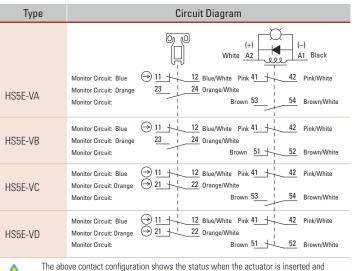

No.	Insulation	No.	Insulation	No.	Insulation	No.	Insulation
1	White	4	Blue	7	Blue/White	10	Pink/White
2	Black	5	Brown/White	8	Orange/White	11	Gray
3	Brown	6	Orange	9	Pink	12	Gray/White

Terminal Number Identification

- When wiring, the terminal number of each contact can be identified by wire color.
- The following table shows the identification of terminal numbers.

Туре	Circuit Diagram				
	$ \begin{array}{c} 0 \\ 0 \\ 0 \end{array} $ White $ \begin{array}{c} (+) \\ ($
