**Enabling Switches** 

# **HS6E Subminiature Interlock Switches with Solenoid**

# **Key features:**

- Compact body: 75 × 15 × 75mm 15mm wide, thinnest solenoid interlock switch in the world
- Reversible mounting and angled cable allow four actuator insertion directions
- Energy saving: 24V DC, 110mA (solenoid: 100mA, LED: 10mA)
- Manual unlocking possible on three sides
- LED indicator shows solenoid operation
- 500N locking retention force

- 2. Contact configuration shows the contact status when actuator is inserted and solenoid on for solenoid lock.
- 3. Indicator LED color is green.
- 4. Actuator keys are not supplied with the interlock switch and must be ordered separately.
- 5. Manual unlock key is included with the interlock switch.
- 6. Standard stock items in bold.

# **Actuator Keys**

Appearance	Item	Ordering Part Number	Remarks
100	Straight Actuator	HS9Z-A61	The retention force of HS9Z-A61 actuator is 500N maximum.  Do not apply excessive load.
00.7	Right-angle Actuator	HS9Z-A62	The retention force of HS9Z-A62 actuator is 100N maximum.  Do not apply excessive load.  When retention force of 100N or more is required, use the HS9Z-A62S actuator.
00.7	Right-angle Actuator with Mounting Plate	HS9Z-A62S	The retention force of HS9Z-A62S actuator is 500N maximum.  Do not apply excessive load.
O wron	Horizontal/Vertical Angle Adjustable Actuator	HS9Z-A65	The HS9Z-A65 and HS9Z-A66 have their metal actuator installed in opposite directions.  Select actuator by determining the required moving direction in consideration of the door and interlock switch.
	Horizontal/Vertical Angle Adjustable Actuator	HS9Z-A66	See page 320 for more information. The retention force of HS9Z-A65 and HS9Z-A66 500N maximum.

**Solenoid Locking Safety Switches**

### **Actuator Mounting Reference Position**

As shown in the figure on the right, the mounting reference position of the actuator key when inserted in the interlock switch is:

The actuator stop on the actuator lightly touches the interlock switch.

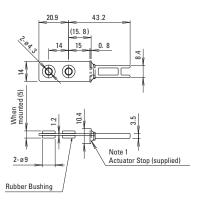

After mounting the actuator, remove the actuator stop from the

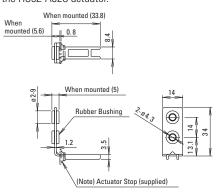

**Overview** 

#### **Actuator Key Dimensions (mm)** Straight Actuator (HS9Z-A61)

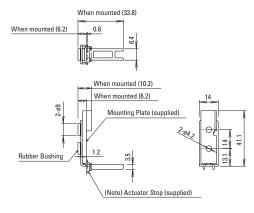

#### Straight Actuator (HS9Z-A61) Right-angle Actuator (HS9Ž-A62)

The retention force of the HS9Z-A62 actuator is 100N. Note: See page 323 for actuator installation. When tensile force exceeding 100N is expected, use the HS9Z-A62S actuator.

#### **Right-angle Actuator** with Mounting Plate (HS9Z-A62S)

**Solenoid Locking Safety Switches** 

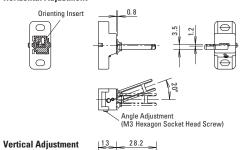

The actuator stop is used to adjust the actuator position. Remove after the actuator position is mounted.

# Angle Adjustable Actuator (HS9Z-A65)

#### **Horizontal Adjustment**

Orienting Insert

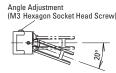

Angle Adjustable Actuator (HS9Z-A65)3 or M4 tapping screw)

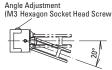

(Note) 'Actuator Stop (supplied) Angle Adjustment (M3 Hexagon Socket He**25** Screw)

#### Angle Adjustable Actuator (HS9Z-A66)

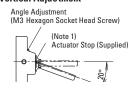

The HS9Z-A65 and HS9Z-A66 have the metal actuator inserted in opposite directions.

#### **Horizontal Adjustment**

#### Vertical Adjustment

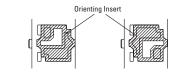

# Manual Unlock Key (plastic)

(supplied with switch, not replaceable)

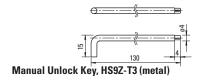

#### **Actuator Adjustment** Orientation

The orientation of actuator adjustment (horizontal/vertical) can be changed using the orienting insert (white plastic) installed on the back of the actuator.

Horizontal Adjustment Vertical Adjustment

Main circuit: Connected to the machine drive control circuit, sending the interlock signals of the protective door.  Monitor circuit: Sends the monitoring signals of open/closed and lock/unlocked statuses of the protective door.  Note 1: Do not attempt manual unlocking while the solenoid is energized.  Note 2: Do not energize the solenoid for a long period of time while the door is open or while the door is unlocked manually using the manual unlock key.									

**Solenoid Locking Safety Switches** 

# **Operation Characteristics (reference)**

0 (Actuator Insertion Position) 1.1 (Locked Position) | 4.7 5.0 27.4 (stroke in mm) Main Circuit Door Monitor Circuit (door open, NO) Contacts ON (closed) Door Monitor Circuit (door closed, NC) : Contacts OFF (open) Lock Monitor Circuit (unlocked, NO) Lock Monitor Circuit (locked, NC)

The characteristics shown in the chart above are of the HS9Z-A61, -A62, -A65, and -A66 actuators. For the HS9Z-A62S actuator, subtract 0.6 mm. The characteristics show the contact status when the actuator enters an entry slot of an interlock switch.

# **Operating Instructions**

**Solenoid Locking Safety Switches** 

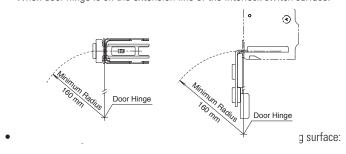

#### **Minimum Radius of Hinged Door**

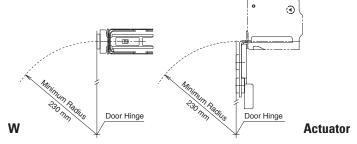

• When using the interlock switch on hinged doors, refer to the minimum radius of doors shown below. When using on doors with small minimum radius, use the angle adjustable actuator (HS9Z-A65 and HS9Z-A66).

Note: Because deviation or dislocation of hinged doors may occur in actual applications, make sure of the correct operation before installation.

#### When Using the HS9Z-A62/A62S Right-angle Actuator

• When door hinge is on the extension line of the interlock switch surface:

• When door hinge is on the extension line of the interlock switch surface

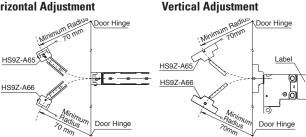

**Vertical Adjustment** 

#### **Horizontal Adjustment**

# Door Hinae Door Hinge HS9Z-A65 HS9Z-A6

When door hinge is on the extension line of the actuator mounting surface

#### **Horizontal Adjustment**

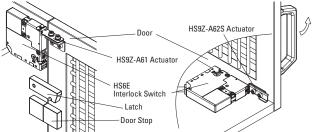

#### Actuator Angle Adjustment for the HS9Z-A65/HS9Z-A66

- Using the angle adjustment screw, the actuator angle can be adjusted (see figures on page 370). Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can enter properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not become loose.

#### **Mounting Examples**

#### Application on Sliding Doors

# **Application on Hinged Doors** HS9Z-A62S Actuato

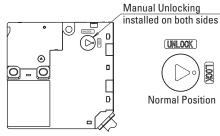

Note: When mounting the actuator, make sure that the actuator enters the slot in the correct direction, as shown on the right

### For Manual Unlocking

### When using the manual unlock key

- Using the interlock switch with the actuator not fully turned (less than 90°) may cause damage to the interlock switch or operation failures (when manually unlocked, the switch will keep the main circuit disconnected and the door unlocked).
- Do not apply excessive force (0.45 N·m or more) to the manual unlock part, otherwise the manual unlock part will become damaged.

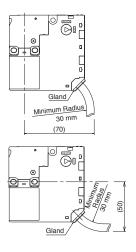

See instruction manual for full details

# **Recommended Tightening Torque of Mounting Screws**

- Interlock switch: 1.0 to 1.5 N·m (three M4 screws)
- Actuators: 1.0 to 1.5 N·m (two M4 screws)

#### **Cables**

- Do not fasten or loosen the gland at the bottom of the interlock switch.
- When bending the cable during wiring, make sure that the cable radius is kept at 30 mm minimum.
- When wiring, make sure that water or oil does not enter from the end of the cable.
- Do not open the lid of the interlock switch. Otherwise the interlock switch will be damaged.
- The solenoid has polarity. Make sure of the correct polarity when wiring.

### Wire Identification

• Wires can be identified by color and or a white line printed on the wire.

No.	Insulation Color	No.	Insulation Color
1	Blue/White	7	White
2	Gray	8	Black
3	Pink	9	Pink/White
4	Orange	10	Brown/White
5	Orange/White	11	Brown
6	Gray/White	12	Blue

#### **Terminal Number Identification**

- When wiring, identify the terminal number of each contact by the color of the insulation.
- The following table shows the identification of terminal numbers.
- · When wiring, cut unused wires to avoid incorrect wiring.

Туре	Contact Arrangement
HS6E-L	Door Monitor  Lock Monitor  White A2 A1 Black  Main circuit: Blue  11 12 41 42 Blue/White  Monitor circuit: Brown  21 22 Brown/White Pink 53 54 Pink/White  Monitor circuit: Orange  31 32 Orange/White
HS6E-M	Main circuit: Blue → 11 12 41 42 Blue/White  Monitor circuit: Brown → 21 22 Brown/White Pink 51 52 Pink/White  Monitor circuit: Orange → 31 32 Orange/White
HS6E-N	Main circuit: Blue
HS6E-P	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$

Note: The contact arrangements show the contact status when the actuator is inserted and locked.
