## Flush Silhouette Switches LB Series / LBW Series

 ø16mm LB Series Switches and Pilot Lights

# Stylish and Fuctional 

## IDEC's extensive range of LB/LBW series switches can be used for a wide range of applications.

## -lush Silhouette

## LB Series Flush Silhouette Switches

Slim 2mm-thick bezels for stylish panels.

## LBW Series Flush Silhouette Switches

Smart appearance with large surface for secure operation.

Flush Silhouette
Projects only 2 mm from the panel surface For sleek and refined

New LBW series with $\varnothing 26 / \square 26 \mathrm{~mm}$ bezels. Large button surface for easy usability. Ideal for frequently used switches such as STOP and START. (Actual size)

## Miniature Switches and Pilot Lights'

ø16mm LB Series Miniature Switches and Pilot Lights Short body for spacesaving installation.

Flush Silhouette \& Miniature Switches and Pilot Lights

Removable Contact Block /Single Board Mounting
Removable contacts enable easy wiring / Single board mounting for space-saving installation.

New UP series has the same depth as LB/ LBW series. Mounts on the same panel (Flush bezel: 34.9 mm , standard bezel: 27.9 mm )

## Waterproof

Degree of protection: IP65

Waterproof

LB Series and LBW Series For diverse applications

Flush silhouette switches and ø16mm miniature switches \& pilot lights. Wide variety of switches to choose from.

New LBW series with large operator surface for Mear easy usability.

Protection degree：IP65（IEC 60529）
For sleek and refined style

For 3-position switches,
maintained and return two-way actions available.

## Flush Silhouette Switches LB Series Flush Silhouette Switches LBW Series ø16mm LB Series Switches and Pilot Lights

## Flush bezel projects only 2 mm from front of panel. Standard bezel with only a panel depth

 of 27.9 mm . Removable contact blocks ideal for single board mounting.- Pushbuttons, selector switches, and key selector switches with up to 3PDT contacts.
- Wave keys are used for key selector switches to prevent duplication of keys. Six different keys are available besides standard key.
- Black or metallic flush bezels available.
- Bright and clear illumination surface. LED illumination.
- Gold-clad, cross-bar contact, or high-capacity silver contacts.
- Protection degree: IP 65 (IEC 60529)

| Applicable Standards | Mark | File No. or Organization |
| :--- | :---: | :--- |

## Flush Silhouette Switches LB Series Illuminated Pushbuttons

Illuminated Pushbuttons

## Solder/Tab Terminal

Package Quantity:1

- Illuminated pushbuttons contain an LED unit. For details on LED units, see page 59.
- The guard opens 180 degrees spring-return.
- Illuminated pushbuttons can be used with legend markings. Engraving can be done on a marking plate which is placed in the lens, or a clear film can be printed and placed in the lens. See page 62 for details on the marking plate and film.
- White lens type (when light is off) are available. Clear lens is used instead of colored lens for amber, green, red, and blue illuminated pushbuttons. Amber, green, red, or blue LED units are used. To specify, see Part Number Development below.
- PC board terminals available for gold contacts. Silver contacts also available. To specify, see Part Number Development below.
- 5 V DC and 12 V AC/DC LED operating voltages also available.
- Other bezel sizes available (LBW series). For details, see page 24.

## Specifications

| Rated Insulation Voltage | 30 V |
| :--- | :--- |
| Rated Operating Voltage | $12,24 \mathrm{~V} \mathrm{DC}$ |
| Operating Voltage Range | $12 \mathrm{~V} \mathrm{DC} \pm 10 \%, 24 \mathrm{~V} \mathrm{DC} \pm 10 \%$ |
| Current Draw | 26 mA |
| Inrush Current | 80 mA maximum |
| Sound Pressure <br> (at 0.1m) | Steady sound: 80 dB minimum <br> (at the rated voltage) |
| Sound Frequency | $2.3 \pm 0.3 \mathrm{kHz}$ |
| Response Speed | 50 ms maximum |
| Operating Temperature | -25 to $+60^{\circ} \mathrm{C}$ (no freezing) |
| Storage Temperature | -30 to $+80^{\circ} \mathrm{C}$ (no freezing) |
| Operating Humidity | 45 to $85 \%$ (no condensation) |
| Insulation Resistance | $100 \mathrm{M} \Omega$ minimum (500V DC megger) |
| Dielectric Strength | Between live and dead parts: <br> $1,000 \mathrm{~V}$ AC, 1 minute |
| Vibration Resistance | Operating extremes/Damage limits: <br> 5 to 55 Hz, amplitude 0.5 mm |
| Shock Resistance | Operating extremes: $100 \mathrm{~m} / \mathrm{s}^{2}$ <br> Damage limits:1,000m/s ${ }^{2}$ |
| Life | 1,000 hours minimum (beep sound) |
| Degree of Protection | IP54 (IEC60529) |
| Terminal Style | Solder/tab terminal \#l10 <br> PC board terminal |
| Weight (approx.) | 13 g (round), 14 g (square) |

## Standards

LB Series

- For details on pc board and circuit design, see page 50.
- For details on single board mounting, see page 51.

## Flush Silhouette Switches LBW Series Illuminated Pushbuttons

## Illuminated Pushbuttons

## Solder/Tab Terminal

- Illuminated pushbuttons contain an LED unit. For details on LED units, see page 59.
- The guard opens 180 degrees spring-return.
- Illuminated pushbuttons can be used with legend markings. Engraving can be done on a marking plate which is placed in the lens, or a clear film can be printed and placed in the lens. See page 62 for details on the marking plate and film.
- White lens type (when light is off) are available. Clear lens is used instead of colored lens for amber, green, red, and blue illuminated pushbuttons. Amber, green, red, or blue LED units are used. To specify, see Part Number Development below.
- PC board terminals available for gold contacts. Silver contacts also available. To specify, see Part Number Development below.
- 5 V DC and $12 \mathrm{~V} \mathrm{AC/DC}$ LED operating voltages also available.
- Other bezel sizes available (LB series). For details, see page 8.

## Solder/Tab Terminal

Package Quantity:1

- Lens can be used with legend markings. Engraving can be done on a marking plate which is placed in the lens, or a clear film can be printed and placed in the lens. See page 62 for details on the marking plate and film.
- Black is available for lens. Black lens consists of a transparent lens and a black marking plate. To specify, see Part Number Development below.
- PC board terminals available for gold contacts. To specify, see Part Number Development below.

Note: Except pilot light and buzzer.

## Notes for Designing PC Board and Circuit

- Use 1.6 -mm-thick glass epoxy PC board with drilled holes.
- Design a circuit so that the LB/LBW series can operate within the rated voltage and current range. Make sure that inrush current and voltage do not exceed the rating.
- Minimum applicable load is 5V AC/DC, 1 mA on gold contacts. Applicable range is subject to the operating condition and load.
- Since the *2.8-mm-wide terminal touches the PC board as shown on the right, short circuit may occur with pattern lines. Design a circuit that prevents short circuits.

## SPDT/DPDT Contacts

## 3PDT Contacts

PC Board Drilling Layout (Bottom View)
3PDT Contacts

Note 1: When designing, note the alignment of centerlines of the contact blocks and centerlines of the operators.
Note 2: The diameter of the terminal hole is $\varnothing 1.2$.
Note 3: Hole diameter may vary to meet installation requirements. Determine the location and the size of the hole so that the locking lever can be operated.

## Single B oard Mounting

IDEC's LB/LBW Series is available for single board mounting.

## Installing and Removing Contact Blocks

Turn the locking lever to install and remove contact blocks on the PC using a screwdriver from a hole in the PC board. See "Notes for Designing PC Board and Circuit" on page 50. Determine the location of the switches so that the locking lever can be operated. See "Removing and Installing the Contact Block" on page 61.

## Mounting Holes and Assembly Procedure

Drill mounting holes in the panel as shown below. When the units are mounted collectively, provide adequate clearance.

## Panel Cut-out for Positioning

## Assembly Procedure

1. Install the operator to the panel.
2. Mount the contact block to the operator from the rear.
3. Turn the locking lever to lock the contact block.
4. Insert the PC board to terminals and solder.

Note 1: Make sure that each terminal is inserted into the PC board correctly.
Note 2: Do not apply tensile force to the connector cable for an extended period of time.
Note 3: Do not expose the contact block to water.
Note 4: Ensure to lock contact blocks when the contact blocks are installed on the operators.

| :--- | :--- |
| Flush Bezel | 29.9 mm |

Panel Cut-out UP8

UP8-89V1

UP8-89V2

## PC Board Mounting Hole

Internal Circuit

The longer pin is the positive terminal

## Safety Precautions

- Turn off power to the unit before installation, removal, wiring, maintenance, and inspection.
Failure to turn off may cause electrical shocks or fire hazard.
- For wiring, use wires of a proper size to meet the voltage and current requirements.
- Improper soldering or failure to tighten the terminal screw may cause overheating and fire.

## Single B oard Mounting

UP series miniature pilot light single board mounting types can be mounted with LB/ LBW series control units on the same panel. Follow the instructions below on single board mounting.

1. Mount the LED kit to the PC board.

## Temporary mounting

1. Note the polarity of the terminals and insert the terminals to the PC board.
2. Make sure that part A of the LED kit is pressed tightly to the PC board. Bend the terminals sideways as shown on the left.
3. Mount the operator and the UP series pilot lights on to the control panel.

4. Mount the contact block to the operator of the miniature control unit and lock the unit by turning the locking lever.

5. Install the PC board in 1 . to the panel in 3.

6. Solder the terminals.

Before soldering, make sure that each terminal of the contact block is securely inserted into the PC board holes.

* When mounting LB/LBW and UP series on a single board, make sure that the distance between the front of the panel and the mounting side of the PC board is as shown in the table below.

| Part No. | Mountable Unit | Distance (*) |
| :--- | :--- | :--- |
| UP8-89V1* | Standard bezel | 22.5 mm |
| UP8-89V2* | Flush bezel | 29.9 mm |
| UP9P-99V1* | Standard bezel | 22.5 mm |
|  | Flush bezel | 29.9 mm |

## Instructions

## Polarity

Pay attention to the polarity of the power supply as UP series units do not contain a diode for protection against reverse polarity. The long terminal is positive and the short terminal is negative.

## Current Limiting Resistor

When using a UP series unit without a built-in current limiting resistor, connect an external current limiting resistor. Calculate the resistance using the following formula.

$=\frac{\text { Operating V̄oltage (V) - Forward Voltage (Vf) }}{\text { Rated Current (I) * }}$

* R ated Current (I) $=\mathrm{R}$ (red), W (white) : 0.007A

$$
\mathrm{G} \text { (green) } \quad: 0.002 \mathrm{~A}
$$

Foward Voltage (Vf) $=\mathrm{R}$ (red), W (white) : 2V
G (green) : 2.7V
Note: Use a resistor of higher resistance than the calculated value ( $\Omega$ )

$$
\begin{aligned}
& \text { Rated Wattage } \\
& \text { of Resistor (W) }
\end{aligned}=\underset{(\mathrm{I})}{\text { Rated Current }} \times \underset{\text { Operating }}{\text { Opoltage (V) }} \times 2 \text { to } 3 *
$$

* 2 to 3 is a safety factor
<C urrent Limiting Resistor Reference Value>

| Operating <br> Voltage | Color | Green (G) |
| :--- | :---: | :---: |
| 5V DC | $430 \Omega(1 / 4 \mathrm{~W})$ | $1200 \Omega(1 / 4 \mathrm{~W})$ |
| 6 V DC | $560 \Omega(1 / 4 \mathrm{~W})$ | $1600 \Omega(1 / 4 \mathrm{~W})$ |
| 12 V DC | $1500 \Omega(1 / 4 \mathrm{~W})$ | $4700 \Omega(1 / 4 \mathrm{~W})$ |
| 24 V DC | $3000 \Omega(1 / 2 \mathrm{~W})$ | $11000 \Omega(1 / 4 \mathrm{~W})$ |

## Countermeasures against Dim Lighting

See page 64.

## Wiring

Solder the terminal at $350^{\circ} \mathrm{C}$ within 3 seconds using a 60 W soldering iron. SnAgCu type lead-free solder is recommended. When soldering, do not touch the pilot light housing with the terminal. Do not bend the terminal or apply excessive force to the terminal.

## Notes on Panel Mounting

Tightening torque should not exceed $0.49 \mathrm{~N} \cdot \mathrm{~m}$. Do not use pliers. Do not tighten with excessive force, otherwise the locking ring will be damaged.

## PC Board and Circuit Design

Use glass epoxy copper clad laminate, double-sided through-hole PC boards with a thickness of 1.6 mm .

## Safety Precautions

- Turn off the power to the LB/LBW series before installation, removal, wiring, maintenance, and inspection. Failure to turn power off may cause electrical shocks or fire hazard.
- To avoid burning your hand, use the lamp holder tool when replacing the lamps.
- For wiring, use wires of a proper size to meet voltage and current requirements. Solder correctly according to the instructions in "Wiring" and "Notes on Terminal Cover." Improper soldering may cause overheating and create a fire hazard. Also, when using tab terminals, use receptacles of appropriate size.

## Instructions

## Wiring

1) Solder the terminals at $350^{\circ} \mathrm{C}$ within 3 seconds using a 60 W soldering iron. Sn -Ag-Cu type is recommended when using leadfree solder. When soldering, do not touch the LB series with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
2) Use non-corrosive liquid flux

## Terminal Cover

## Solder/tab terminal

Insert the terminal cover into the contact block with the TOP markings on the contact block and the terminal cover in the same direction.
Note: When wiring, insert the lead wires into the terminal cover holes before soldering.
After wiring, the terminal covers cannot be installed.

## Standard Bezel

Flush Bezel

## Operating Environment

- Do not use the LB/LBW series where corrosive gases exist or under an environment exceeding the operating temperature and humidity ranges. Otherwise, damages due to contact failure or change of surface color may occur.
- Major parts of the switch are plastic. Scratches or damages may occur when scraped with a sharp object or applied with excessive load or shock. Note that this may cause operation and appearance failure of the operator and bezel.
- Adherence of detergent, cutting oil, or special chemicals to the switch may result in operation failures and appearance failures such as change of surface color.

## Handling

Contacts (micro switch)
When using NC (normally closed) and NO (normally open) contacts of the same microswitch, avoid connections of different voltages, or connections of different types of power supplies. Failure to observe this instruction may cause a short-circuit.

## Protection against oil (IP65)

The LB series has been tested according to JIS C 0920: Appendix 1 by using water insoluble cutting oil Class N3, No. 8 (J IS K 2241) to prove that the switches will not be damaged by oil drops or splashes. This may not apply to special types of oils. Contact IDEC for details.

## Instructions

## Removing and Installing the Contact Block

1) Turn the locking lever on the contact block in the direction opposite to the arrow on the housing. Then the contact block can be removed.
2) Insert the contact block with the TOP markings on the contact block and the operator placed in the same direction. Then lock the units, turning the locking lever in the direction of the arrow.

## Panel Mounting

Remove the contact block from the operator. Insert the operator into the panel cut-out from the front, then install the contact block to the operator.

## (For Standard Bezel)

(For Flush Bezel)

## Notes on Mounting

Use the optional ring wrench (MT-001) to mount the operator onto the panel. The recommended tightening torque is 0.5 to $0.7 \mathrm{~N} \cdot \mathrm{~m}$. Do not use pliers. Excessive tightening will damage the locking ring.

## Replacing the Lens and Marking Plate

## Removing

## [Removing the operator]

## Standard Bezel

1) From the opposite side of the TOP marking, remove the operator (lens, marking plate, and lens holder) using the optional lens removal tool (MT-101) by gripping the recesses of the color lens.

## Flush Bezel

1) From the opposite side of the TOP marking, push the tip (width: 3 mm , thickness: 0.5 mm ) of the flat screwdriver to the groove of the color lens and pull out the operator (lens, marking plate, lens holder).
Note: For metallic bezels, the bezel may be damaged if the screwdriver is inserted from the TOP side or inserted deeply or with force into the groove of the lens.

## [Removing the Operator]

2) Remove the marking plate by pushing the lens from the rear to disengage the latches between the lens and holder, using the screwdriver as shown below.

Note: The translucent in the lens holder cannot be removed because this filter is sealed to make the unit waterproof and oiltight.

## LBW Series Pushbutton (button style)

LBW series pushbuttons (button style, see page 28) can be removed according to the following procedure. LBW series pushbuttons (button style) cannot be removed from the front of the panel.

## [Removing the Operator]

1) Detach the operator unit and contact block. (See Removing and Installing the Contact Block at the top of the page.)
2) Remove the button unit (button, button holder) by pushing out the cross-shaped protrusioon (white) at the back of the operator with a screwdriver.

Illuminated Pushbutton

## Instructions

## Removing the Button

The button can be removed by inserting a small screwdriver into the groove of the button holder.

To attach the button to the button holder, align the groove on cross-shaped protrusion with the positioning protrusion on the button and insert securely.

## Installing

Insert the marking plate into the color lens, and press the lens onto the lens holder to engage the latches. Pay attention to the orientation of the marking plate.

## Installing the Lens Unit and Contact Block

To insert the lens unit into the operator, press in the lens unit by making sure that the latch on the operator is aligned with the latch on the lens unit.

## Round Lens Unit Square Lens Unit

## Standard Bezel

## Marking Plates and Films

For illuminated pushbuttons and pushbuttons with lens, legends and symbols can be engraved on the marking plates, or printed film can be inserted under the lens for labelling purposes.
Marking Plate and Marking Film Size
LB Series (flush bezel / standard bezel)

| Lens | Round Square | Rectangular |
| :---: | :---: | :---: |
|  | - Engraving must be made on the engraving deep. <br> - The marking plate is made of white acrylic r | a within 0.5 mm in. |
|  | - Film thickness: 0.1 mm per film <br> - Marking film is not included. <br> - Recommended marking film: Polyester film |  |

## LBW Series

| Lens | Round ${ }^{\text {a }}$ Square |
| :---: | :---: |
|  | - Film thickness: 0.1 mm per film. <br> - The marking plate is made of white acrylic resin. |
|  | - Film thickness: 0.1 mm per 2 films or 0.2 mm per film. <br> - Marking film is not included. <br> - Recommended marking film: Polyester film |

Insertion Order of Marking Plate and Film

The marking plate must be engraved on the specified side as shown above.
Pay attention to the orientation of the marking plate.

## Instructions

When using in places where the switches are subjected to water splash or an excessive amount of dust, make sure to use the optional rubber boot.
As shown in the drawing below, (1) remove the gasket from the operator, and (2) attach the rubber boot from the front (button side).

## Standard Bezel

For rectangular and square units, pull out the seals of the rubber boot and place them around the operator sleeve as shown below. Make sure that the seals are not twisted or tucked inside and that the gasket is removed, otherwise waterproof and dustproof characteristics are not ensured.

## Orientation of the LED unit

Insert the LED unit into the contact block with the TOP markings on the contact block and LED unit in the same orientation.

Notes on replacing the LED Unit
When replacing the LED unit, make sure that static electricity is not applied.
Make sure that the LB/LBW series has cooled down before replacing the LED unit. To avoid burn injuries, be careful not to touch the unit while it is still hot.

## Notes on Using Quick Connect Terminals

1) Use \#110 tab quick connects, 0.5 mm -thick.
2) When connecting the terminals on the left and center, make sure that surfaces of the quick connects face each other. Otherwise, short-circuit may occur.

Correct

3) Apply only horizontal force against the panel to the tab. The switch may be damaged if a force other than a horizontal force is applied.

## Installing the Rubber B oot

The LED unit can be replaced without tools by pulling out the lens unit from the contact block.

Incorrect

How to Install the Rubber Boot
Rectangular

Rubber boot installed

Round

Rubber boot installed

Illuminated Pushbutton

## Instructions

## Flush Bezel

Mount the rubber boot so that the protrusion at the bottom surface of the operator fits with the recess on the operator, placing the rubber boot all around the operator sleeve. Make sure that the protrusion on the rubber boot and the recess on the operator is properly fitted, otherwise, the waterproof and dustproof characteristics are not ensured.

How to Install the Rubber B oot

Bad

Note: Install the rubber boot before mounting the unit to the panel.

## Maintained Pushbuttons

Do not replace the buttons when the pushbutton is in the maintained position. Replacing the button in the maintained position may damage the internal mechanism. Also, do not remove the contact block with the button in the maintained position. The contact may not operate properly when the contact block is remounted. Make sure to push down fully when using the pushbuttons.

## Pushbuttons and Illuminated Pushbuttons with Switch Guard

Do not apply force to the switch guard when the switch guard is not attached to a panel. When opening the switch guard, do not open more than $180^{\circ}$. The hinge may break.

## Selector Switches

When turning the operator or key, make sure that they are properly turned to each position.

## Selector Switches with Key

Observe the following instructions to prevent malfunction or damage.

- Insert the key to the bottom of the key hole.
- Do not remove the key from any key retained position.
- Besides the standard key (key number 0H), six other key numbers are available. Use a key of the matching number with the key cylinder. The standard key does not have a key number indication.
- Keys are available in two types.

Key numbers 0 H (standard), 1H, and 2 H are reversible keys which can be inserted in two ways.
Key numbers $3 \mathrm{H}, 4 \mathrm{H}, 5 \mathrm{H}$, and 6 H are non-reversible keys. Make sure of correct insertion direction.

## Countermeasures against Dim Lighting

Leakage currents through transistors or a contact protection circuit may cause the LED lamp to illuminate dimly even when the output is off.
When the LED lamp is illuminated by a transistor output, take the following measure.

Leakage Current Shunt Resistor Allotment Table (Recommended)

| Leakage <br> Current <br> lo | Shunt resistance R |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Red (R), White (W) |  | Green (G) |  |
|  | $13 \mathrm{k} \Omega$ | 0.25 W | $18 \mathrm{k} \Omega$ | 0.25 W |
| 0.1 to 0.7 mA | $2 \mathrm{k} \Omega$ | 0.25 W | $2.7 \mathrm{k} \Omega$ | 0.25 W |

## Noise

LED elements deteriorate due to extraneous noise, resulting in significant decrease in luminance, hue change, or failure of lighting. When such effects are anticipated, take a protection measure shown below. However, measures may differ according to operating environment and condition

(+)
(-)

## Static Electricity (UP Series)

UP series are delicate products that may be damaged by static electricity Make sure to take measures to prevent static electricity.
