#### Attention please!

The information herein is given to describe certain components and shall not be considered as warranted characteristics.

Terms of delivery and rights to technical change reserved.

We hereby disclaim any and all warranties, including but not limited to warranties of non-infringement, regarding circuits, descriptions and charts stated herein.

Infineon Technologies AG is an approved CECC manufacturer.

#### Information

For further information on technology, delivery terms and conditions and prices, please contact your nearest Infineon office in Germany or our Infineon representatives worldwide (see at http://www.infineon.com).

#### Warnings

Due to technical requirements components may contain dangerous substances. For information on the types in question, please contact your nearest Infineon office.

Infineon components may only be used in life-support devices or systems with the express written approval of Infineon, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

# Dual IGBT Driver IC 2FD020I12-FI

#### **Product Highlights**

- Fully operational to ±1.2 kV
- Power supply operating range from 14 to 18 V
- Gate drive currents of +1 A / -2 A
- · Matched propagation delay for both channels
- High dV/dt immunity
- Low power consumption
- General purpose operational amplifier
- General purpose comparator

#### **Features**

- Floating high side driver
- Undervoltage lockout for both channels
- 3.3 V and 5 V TTL compatible inputs
- CMOS Schmitt-triggered inputs with pull-down
- · Non-inverting inputs
- Interlocking inputs
- · Dedicated shutdown input with pull-up
- · RoHS compliant

# High and Low Side Driver 2ED020I12-FI

Overview

### 1 Overview

The 2ED020I12-FI is a high voltage, high speed power MOSFET and IGBT driver with interlocking high and low side referenced outputs. The floating high side driver may be supplied directly or by means of a bootstrap diode and capacitor. In addition to the logic input of each driver the 2ED020I12-FI is equipped with a dedicated shutdown input. All logic inputs are compatible with 3.3 V and 5 V TTL. The output drivers feature a high pulse current buffer stage designed for minimum driver cross-conduction. Propagation delays are matched to simplify use in high frequency applications. Both drivers are designed to drive an N-channel power MOSFET or IGBT which operate up to 1.2 kV. In addition, a general purpose operational amplifier and a general purpose comparator are provided which may be used for instance for current measurement or overcurrent detection.

Final Datasheet 4 September 2007

Pin Configuration and Functionality

### High and Low Side Driver 2ED020I12-FI

**Functional Description** 

## 4 Functional Description

### 4.1 Power Supply

The power supply of both sides, "VSL" and "VSH", is monitored by an undervoltage lockout block (UVLO) which enables operation of the corresponding side when the supply voltage reaches the "on" threshold. Afterwards the internal voltage reference and the biasing circuit are enabled. When the supply voltage (VSL, VSH) drops below the "off" threshold, the circuit is disabled.

### 4.2 Logic Inputs

The logic inputs InH, InL and  $\overline{SD}$  are fed into Schmitt-Triggers with thresholds compatible to 3.3V and 5V TTL. When  $\overline{SD}$  is enabled (low), InH and InL are disabled. If InH is high (while InL is low), OutH is enabled and vice versa. However, if both signals are high, they are internally disabled until one of them gets low again. This is due to the interlocking logic of the device. See Figure 3 (section 4.7).

#### 4.3 Gate Driver

2ED020I12-FI features two hard-switching gate drivers with N-channel output stages capable to source 1A and to sink 2A peak current. Both drivers are equipped with active-low-clamping capability. Furthermore, they feature a large ground bounce ruggedness in order to compensate ground bounces caused by a turn-off of the driven IGBT.

### 4.4 General Purpose Operational Amplifier

This general purpose operational amplifier can be applied for current measurement of the driven low-side IGBT. It is dedicated for fast operation with a gain of at least 3. The OP is equipped with a -0.1 to 2V input stage and a rail-to-rail output stage which is capable to drive  $\pm\,5$ mA.

### 4.5 General Purpose Comparator

The general purpose comparator can be applied for overcurrent detection of the low side IGBT. A dedicated offset as well as a pull-up and pull-down resistor has been introduced to its inputs for security reasons.

### 4.6 Coreless Transformer (CLT)

In order to enable signal transmission across the isolation barrier between low-side and high-side driver, a transformer based on CLT-Technology is employed. Signals, that are to be transmitted, are specially encoded by the transmitter and correspondingly restored by the receiver. In this way EMI due to variations of GNDH (dV<sub>GNDH</sub>/dt) or the magnetic flux density (dH/dt) can be suppresed.To compensate the additional propagation delay

Final Datasheet 8 September 2007

### **Functional Description**

of transmitter, level shifter and receiver, a dedicated propagation delay is introduced into the low-side driver.

**Electrical Parameters** 

## 5 Electrical Parameters

### 5.1 Absolute Maximum Ratings

Note: Absolute maximum ratings are defined as ratings, which when being exceeded may lead to destruction of the integrated circuit. Unless otherwise noted all parameters refer to GND.

| Parameter   | Symbol                 | Limit | Values    | Unit | Remarks                           |  |
|---|------------------------|-------|-----------|------|-----------------------------------|--|
|   |                        | min.  | max.      |      |                                   |  |
| High side ground  | GNDH                   | -1200 | 1200      | V    |                                   |  |
| High side supply voltage                                    | VSH                    | -0.3  | 20        | V    | 1)                                |  |
| High side gate driver output                                | OutH                   | -0.3  | VSH + 0.3 | V    | 1)                                |  |
| Low side ground   | GNDL                   | -0.3  | 5.3       | V    |                                   |  |
| Low side supply voltage                                     | VSL                    | -0.3  | 20        | V    | 2)                                |  |
| Low side gate driver output                                 | OutL                   | -0.3  | VSL + 0.3 | V    | 3)                                |  |

<sup>1)</sup> With reference to high side ground GNDH.

#### 5.3 Electrical Characteristics

Note: The electrical characteristics involve the spread of values guaranteed for the supply voltages, load and junction temperature given below. Typical values represent the median values, which are related to production processes. Unless otherwise noted all voltages are given with respect to ground (GND).  $VSL = VSH - GNDH = 15 V, C_L = 1 nF, T_A = 25 \,^{\circ}C. Positive currents are assumed to be flowing into pins.$

**Package Outline** 

## 6 Package Outline

Note: dimensions are given in mm.

### 6.1 Soldering Profile

The soldering profile qualified for 2ED020I12-FI (according to the standard IPC/JEDEC J-STD-020C) is moisture sensitivity level 3. The peak reflow temperature for its package (volume  $< 350 \text{ mm}^3$ ) is  $260 + 0/-5 \text{ }^{\circ}\text{C}$ .

Application Advices

# 8 Application Advices

### 8.1 Operational Amplifier

To minimize the current consumption when the operational amplifier is not used, it is necessary to connect both inputs properly, e.g connect OP+ to 5V and OP- to 0V or vice versa.

On the other hand, the operational amplifier cannot operate with a follower configuration , i.e OP- = OPO. A minimum gain of 3 has to be used so that its output OPO has a stable behaviour.

### 8.2 Power Supply

- a) The connection of a capacitor (>10nF) as close as possible to the supply pins VSH, VSL is recommended for avoiding that possible oscillations in the supply voltage can cause erroneous operation of the output driver stage. Total value of capacitance connected to the supply terminals has to be determined by taking into account gatecharge, peak current, supply voltage and kind of power supply.
- b) If a bootstrap power supply for the high side driver is applied, a resistor of  $10\Omega$  minimum in series with the bootstrap diode is recommended.

Final Datasheet 21 September 2007

# **Total Quality Management**

Qualität hat für uns eine umfassende Bedeutung. Wir wollen allen Ihren Ansprüchen in der bestmöglichen Weise gerecht werden. Es geht uns also nicht nur um die Produktqualität – unsere Anstrengungen gelten gleichermaßen der Lieferqualität und Logistik, dem Service und Support sowie allen sonstigen Beratungs- und Betreuungsleistungen.

Dazu gehört eine bestimmte Geisteshaltung unserer Mitarbeiter. Total Quality im Denken und Handeln gegenüber Kollegen, Lieferanten und Ihnen, unserem Kunden. Unsere Leitlinie ist jede Aufgabe mit "Null Fehlern" zu lösen – in offener Sichtweise auch über den eigenen Arbeitsplatz hinaus – und uns ständig zu verbessern.

Unternehmensweit orientieren wir uns dabei auch an "top" (Time Optimized Processes), um Ihnen durch größere Schnelligkeit den entscheidenden Wettbewerbsvorsprung zu verschaffen.

Geben Sie uns die Chance, hohe Leistung durch umfassende Qualität zu beweisen.

Wir werden Sie überzeugen.

Quality takes on an all encompassing significance at Infineon AG. For us it means living up to each and every one of your demands in the best possible way. So we are not only concerned with product quality. We direct our efforts equally at quality of supply and logistics, service and support, as well as all the other ways in which we advise and attend to you.

Part of this is the very special attitude of our staff. Total Quality in thought and deed, towards co-workers, suppliers and you, our customer. Our guideline is "do everything with zero defects", in an open manner that is demonstrated beyond your immediate workplace, and to constantly improve.

Throughout the corporation we also think in terms of Time Optimized Processes (top), greater speed on our part to give you that decisive competitive edge.

Give us the chance to prove the best of performance through the best of quality – you will be convinced.
