## B G SX 24 MU16

## DP4T Antenna Cross Switch with MIPIRFFEControl Interface

## Features

- High linearity up to 36.5 dBm input power
- Low insertion loss and high port-to-port isolation up to 5.0 GHz
- Low current consumption
- MIPI RFFE 2.1 compliant control interface
- Software and hardware programmable USID
- Ultra low profile leadless plastic package
- RoHS and WEEE compliant package

## Potential Applications

DP4T antenna routing/swapping for cellular mobile devices. GSM/WCDMA/LTE post PA power level routing switch.

## Product Validation

Qualified for industrial applications according to the relevant tests of JEDEC47/20/22.

## Product Description

## 1 Features

- RF CMOS DP4T antenna cross switch with power handling capability of up to 36.5 dBm
- Suitable for multi-mode LTE and WCDMA quadruple antenna applications
- Low insertion loss and harmonics generation

- 0.1 to 5.0 GHz coverage
- High port-to-port-isolation
- No blocking capacitors required if no DC applied on RF lines
- Integrated MIPI RFFE interface operating in 1.65 to 1.95 V voltage range
- Software programmable MIPI RFFE USID
- Leadless and halogen free package PG-ULGA-16-1 with lateral size of $2.0 \mathrm{~mm} \times 2.0 \mathrm{~mm}$ and thickness of 0.59 mm
- No power supply decoupling required
- High EMI robustness
- RoHS and WEEE compliant package

## 2 Product Description

The BGSX24MU16 RF CMOS switch is specifically designed for LTE and WCDMA quadruple antenna applications. This DP4T offers low insertion loss and low harmonic generation.

The switch is controlled via a MIPI RFFE controller. The on-chip controller allows power-supply voltages from 1.65 to 1.95 V . The switch features direct-connect-to-battery functionality and DC-free RF ports. Unlike GaAs technology, external DC blocking capacitors at the RF Ports are only required if DC voltage is applied externally. The BGSX24MU16 RF Switch is manufactured in Infineon's patented MOS technology, offering the performance of GaAs with the economy and integration of conventional CMOS including the inherent higher ESD robustness. The device has a very small size of only $2.0 \times 2.0 \mathrm{~mm}^{2}$ and a maximum thickness of 0.59 mm .

Table 1: Ordering Information

| Type | Package | Marking |

Warning: Stresses above the max. values listed here may cause permanent damage to the device. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit. Exposure to conditions at or below absolute maximum rating but above the specified maximum operation conditions may affect device reliability and life time. Functionality of the device might not be given under these conditions.

DP4T Antenna Cross Switch with MIPI RFFE Control Interface

## MIPI RFFE Specification

## 6 MIPI RFFE Specification

The MIPI RFFE interface is working in systems following the 'MIPI Alliance Specification for RF Front-End Control Interface version 2.1-18 December 2017' as well as the 'Qualcomm RFFE Vendor specification 80-N7876-1 Rev. W'.

## Table 12: MIPI Features

| Feature | Supported | Comment |
| :--- | :---: | :--- |
| MIPI RFFE 2.1 standard | Yes | Backward compatible to MIPI 2.0 standard |
| Register 0 write command sequence | Yes |  |
| Register read and write command sequence | Yes |  |
| Extended register read and write command se- <br> quence | Yes |  |
| Masked write command sequence | Yes | Indicated as MW in below register mapping tables |
| Support for standard frequency range operations <br> for SCLK | Yes | Up to 26 MHz for read and write |
| Support for extended frequency range operations <br> for SCLK | Yes | Up to 52 MHz for write |
| Half speed read | Yes |  |
| Full speed read | Yes |  |
| Full speed write | Yes |  |
| Longer Reach RFFE Bus Length Feature | Yes | Up to 80 pF |
| Programmable driver strength | Yes |  |
| Programmable Group SID | Yes | Support for three registers write and extended write se- |
| Programmable USID | Yes |  |
| Trigger functionality | Yes |  |
| Extended Triggers and Trigger Masks | Yes |  |
| Broadcast / GSID write to PM TRIG register | Yes | External pin for changing USID: |
| Reset | Yes | Via VIO, PM TRIG or software register |
| Status / error sum register |  |  |
| Extended product ID register | Yes |  |
| Revision ID register | SSEL = $\rightarrow 1010$ |  |
| Group SID register | YSID select pin | Yes |
| USID selection via SDATA / SCLK swap feature |  |  |
|  |  | Yes |

Table 13: Startup Behavior

| Feature | State | Comment |
| :--- | :--- | :--- |
| Power status | Low power | Lower power mode after start-up |
| Trigger function | Enabled | Enabled after start-up. Programmable via behavior control register |

DP4T Antenna Cross Switch with MIPI RFFE Control Interface

## Package Information

## 7 Package Information

The switch has a package size of $2000 \mu \mathrm{~m}$ in X -dimension and $2000 \mu \mathrm{~m}$ in Y -dimension with a maximum deviation of $\pm 50 \mu \mathrm{~m}$ in each dimension. Fig. 2 shows the footprint from top view. The pin definitions are listed in Tab. 19.

Table 18: Mechanical Data

| Parameter | Symbol | Value | Unit |
| :--- | :--- | :--- | :--- |
| Package X-dimension | $X$ | $2000 \pm 50$ | $\mu \mathrm{~m}$ |
| Package Y-dimension | $Y$ | $2000 \pm 50$ | $\mu \mathrm{~m}$ |
| Package height | $H$ | $590 \pm 50$ | $\mu \mathrm{~m}$ |

Figure 2: Footprint (top view)

Table 19: Pin Definition and Function

| Pin No. | Name | Function |
| :--- | :--- | :--- |
| 1 | RFIN1 | RF input port 1 |
| 2 | GND | RF ground |
| 3 | RFOUT1 | RF output port 1 |
| 4 | GND | RF ground |
| 5 | SSEL | MIPI USID select port (to be connected to VIO or GND) |
| 6 | VIO | MIPI RFFE power supply |
| 7 | SCLK | MIPI RFFE clock |
| 8 | SDATA | MIPI RFFE data |
| 9 | VDD | Power supply |
| 10 | GND | RF ground |
| 11 | RFOUT2 | RF output port 2 |
| 12 | GND | RF ground |
| 13 | RFIN4 | RF input port 4 |
| 14 | RFIN3 | RF input port 3 |
| 15 | GND | RF ground |
| 16 | RFIN2 | RF input port 2 |
| 17 | GND | RF ground |
