24V – 60V Solutions for Transportation

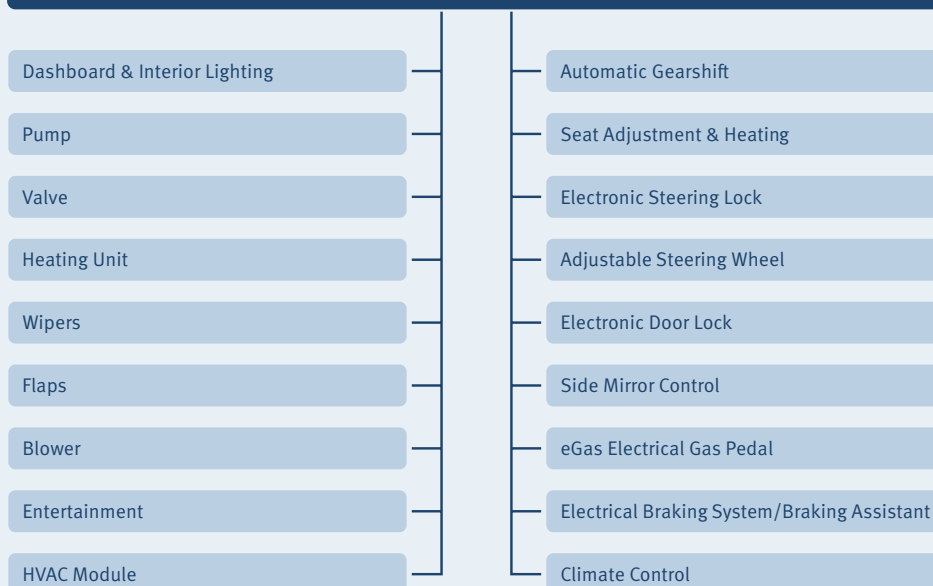

Large trucks, campers and recreation vehicles are a common sight on today's roads and highways. And ever more people have hobbies requiring the transportation of equipment such as boats, snow mobiles, jet skis or other vehicles. There are many other examples of applications driven by 24V systems. In this brochure, you will find the complete portfolio of Infineon products specifically developed for this attractive and growing market. The products featured here encompass a complete range of microcontrollers, power and sensor devices. The other large market segment addressed in this brochure is that of smaller methods of transportation, examples of which include eScooters and eBikes.

Application Overview

Exterior Truck Applications

Interior Truck Applications

Trucks

24V Transport Applications

Infineon has seized the No. 1 spot in automotive power semiconductors by creating innovative power control solutions. Engineers highly value the reliability and versatility designed into these power products and have used them successfully in many automotive and non-automotive applications.

Innovative Technologies, Advanced Techniques

Infineon leverages various technologies to create these innovations, such as N- and P-Channel MOSFETs, S-Smart power and logic, and Smart Power Technologies (SPT) featuring monolithic analog and digital power. We also use advanced assembly techniques such as chip-by-chip, chip-on-chip and power bond for high-current wire bonding.

Step up to the Next Generation

By combining these technologies, Infineon produces forward-looking products designed to enable the next generation of innovative 24V solutions. Alongside a broad portfolio of products for 24V applications, we also offer the building blocks for all end-to-end 24V solutions, including voltage regulators, communication ICs, microcontrollers and Hall sensors.

Construction and Agriculture Vehicles

24V systems are primarily integrated into systems for trucks, as well as for construction and agricultural vehicles. Infineon offers a broad range of power products, microcontrollers and sensors – all of which are qualified to automotive standards and benefit from the Zero Defect Quality Program – for this attractive and growing market.

Take a moment to look at our wide range of 24V products. You are sure to find the perfect solution among them. We look forward to helping you realize your next innovation.

Sport and Alternative Vehicles

Sport Vehicles, 24V Transport Applications

In many parts of the world, there is an ever-increasing demand for leisure vehicles. These include boats driven by diesel engines and 24V systems, ranging from small boats to large ships. This brochure is also aimed at applications such as snow mobiles and jet skis, and the broad range of vehicles serving the ever-expanding leisure market.

Infineon has a variety of products for these applications, all of which are based on our excellent quality and technologies. They have been developed to ensure our continued leadership in these markets and applications, and will enable you to design products to address any customer demand.

Alternative Vehicles, Small Electrical Vehicles

Movement is one of those things that make people smile, bringing enjoyment to a very broad cross-section of society. There are many ways of appreciating movement – from exclusive, fast cars to convenient small electrical vehicles.

The market segment addressed by the range of products featured in this part of the brochure is that of small electrical vehicles. These include electric wheelchairs, golf carts and fork lift trucks, all of which are driven by battery-operated motors. Infineon has a large selection of products that have been developed for this ever-expanding market.

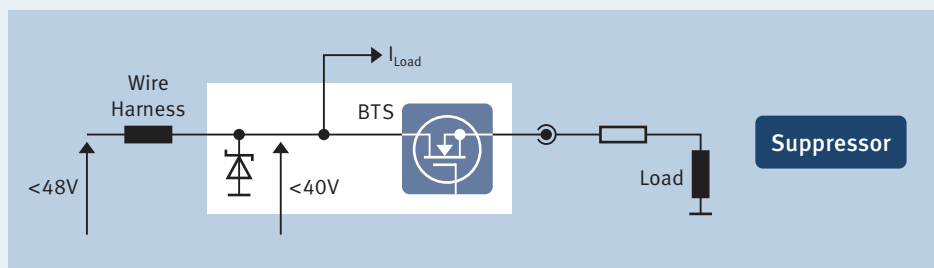

24V – 60V Requirements for Transportation Applications

Due to the longer running times, higher mileage and cranking cycles synonymous with the truck business, the associated requirements regarding quality, reliability and robustness are even more demanding.

Car and Truck Requirements Comparison

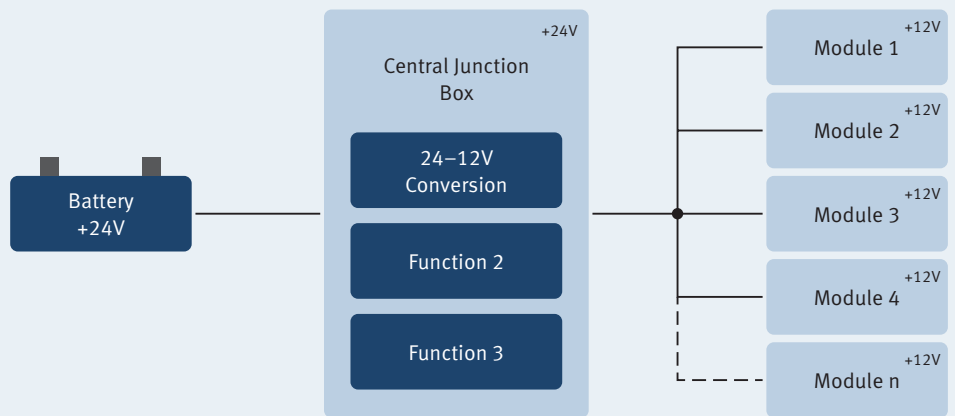

Parameter	Car	Truck
Running time	10,000 hours	50,000 hours
Idle time	76,000 hours	37,000 hours
Distance	250,000 km	2,000,000 km 4,000,000 km trailer
Average speed	25 km/h	40 km/h
Cranking/handbrake	100,000	300,000

Three Ways of Protecting Electrical Systems against Overvoltage

Centralized Clamping/Overvoltage Protection – Overvoltage Protection via a Central Clamping Device in the Alternator

Decentralized Clamping/Overvoltage Protection (for parts < 58V voltage rating) – overvoltage protection in every single module

Truck Body Control Module (BCM) Example for Lighting

The sample diagram below shows a typical central body control module, which is the central computing module for automotive lighting application. It consists of a microcontroller and power switches, as well as supply ICs and network transceivers.

System Benefits

- 24V complete system solution: power supply, communication, sensors, microcontroller and power switches can be used without external protection.
- PROFET™+ 24V provides excellent diagnostics and protection features, and a high current sense accuracy even for the smallest loads as LEDs.
- 100% pin-to-pin compatibility between the 12V and 24V PROFET™ family.

1) In development, engineering samples available
 2) In development, samples available soon
 3) In development, samples available. With external protection against load dump 400ms above 40V. Pre-Regulation is important by using R_{th} for calculation of power loss for TLE926xQx devices.
 4) If ECU permanently supplied, need to add external protection against load dump 400ms above 40V.

Brushless DC (BLDC) Motor Control

A 24V complete system solution for a BLDC motor: power supply, sensors, microcontroller, driver (certified ISO26262) and MOSFETs can be used without external protection in a 24V system.

System Benefits

- For 24V motor control application, Infineon can offer 60, 80 or 100V MOSFETs which can be used according to the application requirements.
- Lowest ohmic MOSFET on the market for higher current capability.
- Integrated MOSFET driver IC TLE9180 with diagnostics, compliant with ISO 26262.
- 24V complete system solution: power supply, communication, sensors, microcontroller and power switches can be used without external protection.

1) Product under development.

2) With external protection against load dump 400ms above 40V.
Reverse polarity protection is not integrated on this diagram.

Infineon's PRO-SIL™ Program, Designed to Protect

Infineon's PRO-SIL™ safety program is designed to ease and speed up your automotive and industrial design to comply with the above standards. Across the full certification spectrum from Safety Integrity Levels (SIL) 1 to 4 and Automotive Safety Integrity Levels (ASIL) A to D, our end-to-end PRO-SIL™ approach will help you select the right hardware, software and functional safety concepts to meet your design and compliance needs.

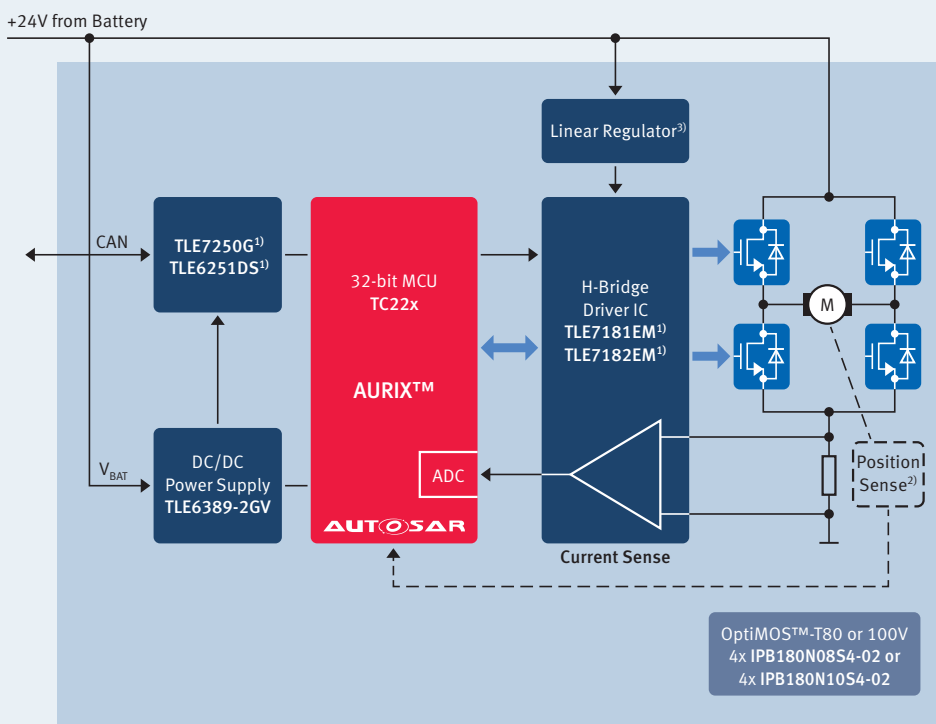

DC Motor Control

The application below shows a typical system for 2-phase motor control. On one side, the communication interface ensures connection to other ECUs via CAN (TLE7250G or TLE6251DS). The new AURIX™ microcontroller family TC22x will adapt the output signals to control the motor based on the programmed algorithm. Finally, the H-bridge driver devices TLE7182EM or TLE7181EM will control the external MOSFETs (IPB180Nxx S4-02) modifying the speed or direction of the motor.

Furthermore, the TLE6389-2GV can ensure a reliable power supply for the full system. In the case of applications where voltages higher than 40V are expected (i.e. load dump), the maximum ratings and power consumption of the H-bridge supply may need to be analyzed. Depending on the final application, additional feedback paths – such as sensing devices for position control – might be required.

System Benefits

- For 24V motor control application, Infineon can offer 60, 80 or 100V MOSFETs which can be used according to the application requirements.
- Lowest ohmic MOSFET on the market for higher current capability.
- 24V complete system solution: power supply, communication, sensors, microcontroller and power switches can be used without external protection.

1) If ECU permanently supplied, may need to add external protection against load dump 400ms above 40V.

2) Position sensing is optional depending on the final application.

3) Device may be optional depending on final application requirements (load dump and power dissipation).

Reverse polarity protection is not integrated on this diagram. However, it might be required.

Hydraulic Management System

A 24V complete system solution for hydraulic management systems: power supply, sensors, microcontroller and high-side switches can be used without external protection in a 24V system. Valves and pumps can be driven via linear activation or demand-controlled via PWM signals.

System Benefits

- Valves and pumps can be driven via linear activation or demand-controlled via PWM signals.
- Quad and dual channels are optimized to reduce costs and space for these applications.
- Pin-to-pin and software compatibility.

1) If ECU permanently supplied, may need to add external protection against load dump 400ms above 40V.

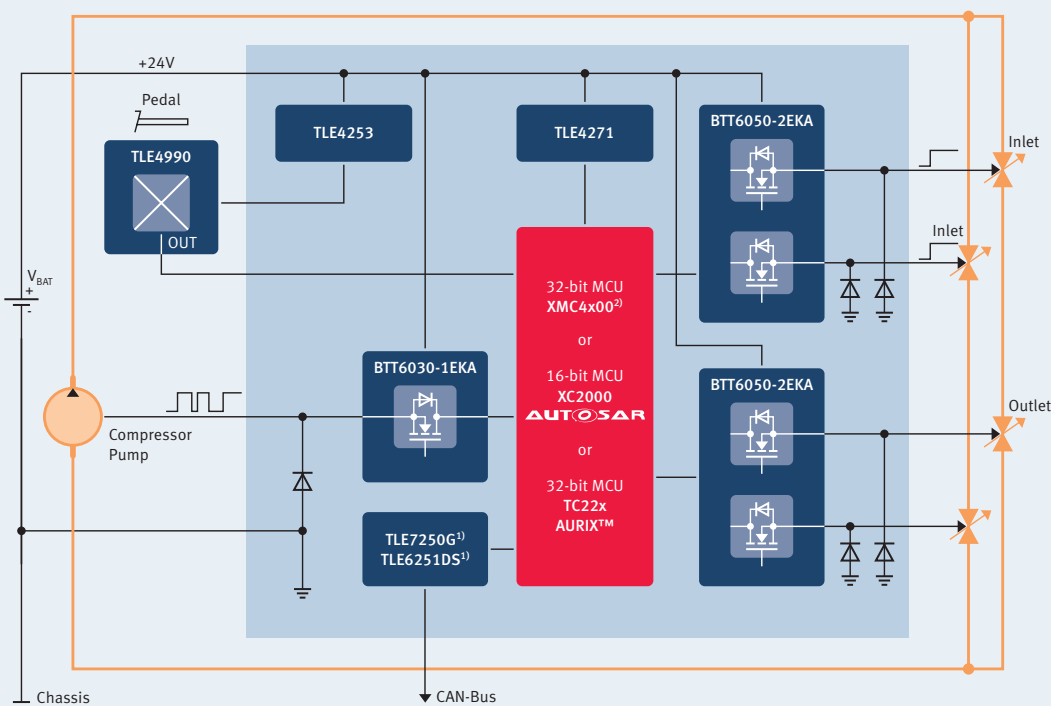

2) Not AEC-Q100 qualified

Pneumatic Management System

A 24V complete system solution for pneumatic management systems: power supply, sensors, microcontroller and high-side switches can be used without external protection in a 24V system. Valves and pumps can be driven via linear activation or demand-controlled via PWM signals.

System Benefits

- Valves and pumps can be driven via linear activation or demand-controlled via PWM signals.
- Quad and dual channels are optimized to reduce costs and space for these applications.
- Pin-to-pin and software compatibility.

- 1) If ECU permanently supplied, may need to add external protection against load dump 400ms above 40V.
 2) Not AEC-Q100 qualified

Infineon OptiMOS™ – Benchmark for Automotive MOSFETs

OptiMOS™ Product Family 60V, 75V and 100V Single N-Channel

We offer a broad product portfolio of OptiMOS™ 60V in trench technology, OptiMOS™ 75V in planar technology and OptiMOS™ 100V in trench technology for various truck applications. Superior performance is guaranteed by our leading MOSFET technology combined with the unsurpassed quality of our robust package.

Key Features

- OptiMOS™ 60V with
 - $R_{DS(on)}$: 1.7–30m Ω
 - Packages: PG-TDSON-8 (SuperSO8), PG-TO252, PG-TO263, PG-TO220-3
- OptiMOS™ 75V with
 - $R_{DS(on)}$: 6.5–50m Ω
 - Packages: PG-TO252, PG-TO263, PG-TO220-3
- OptiMOS™ 100V with
 - $R_{DS(on)}$: 4.8–31m Ω
 - Packages: PG-TO252, PG-TO263, PG-TO220-3, PGTO262-3

Key Benefits

- High-current capability up to 180A
- Robust green packages for highest quality and reliability
- Low switching and conduction power losses

Key Applications

- Daytime running light
- Fuel Injection
- ABS valves

Dual N-Channel OptiMOS™ Product Table

HITFET™

Innovative, Robust and High-Performance Switches

HITFET™ are MOSFETs with embedded protection functions. These devices are ideal for applications from 24V to 60V in which robustness, long life reliability and wide temperature ranges are required.

Key Features

- Overcurrent protection
- Overtemperature protection
- Overvoltage protection
- ESD protection
- Diagnostic feedback
- Switching speed controlled by design

Key Benefits

- Scalable portfolio from 30–550mΩ
- Packages: SO8, SOT223, DPAK, D²PAK
- Feature and pin-compatible family concept
- Reputation for quality, reliability and robustness
- Well designed for target application

Key Applications

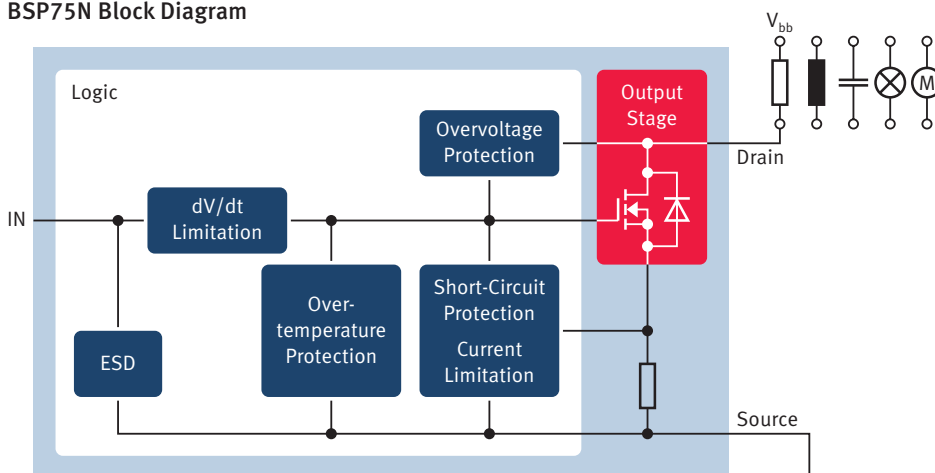

- Relay driver
- Small load driver

BSP75N Block Diagram

Multi-Channel Switches for Truck Applications

Low-Side Switches for Powertrain Applications

Multi-channel low-side switches in Smart Power Technology (SPT) with two to eighteen open-drain DMOS output stages. The products are protected by embedded protection functions and designed for automotive applications. The output stages can be controlled directly by parallel inputs for PWM applications (e.g. gasoline port injection) and by SPI or by Micro Second Channel (MSC). Diagnosis can be read via serial communication or, in the case of some devices, by the external fault pin.

Key Features

- Overvoltage protection with active clamping
- Undervoltage protection
 - Power-ON reset
 - Undervoltage shutdown
- Overcurrent protection
- Overtemperature shutdown protection
- Electrostatic Discharge (ESD) protection
- Low quiescent current mode
- Direct input control (for PWM)
- Communication interface (Control/Diagnosis)
 - Serial Peripheral Interface (SPI)
 - Micro Second Channel (MSC)
- 2-bit diagnosis feedback (and status flag)

Key Benefits

- Dedicated feature-set for engine management application
- Robust design
- Product family to adapt to various system requirements and partitioning

PROFET™ for 24V Applications

High-Side Switches Fulfilling 24V Requirements

As part of our successful PROFET™ (ProtectedFET) portfolio, we offer parts which are also suitable for driving loads in 24V applications. The devices come in robust green packages and offer complete protection against harsh environments, such as those required for truck applications. This includes protection against short-circuit through current limitation, as well as overtemperature protection via thermal shutdown. Thanks to overvoltage protection (such as load dump), no additional suppressor diode is needed to protect the device against abnormal voltage events which normally occur in 24V vehicles. In addition to the protection functions, diagnostic information provides the microcontroller with failure reports.

Key Features

- > 58V voltage rating
- Current limitation
- Protection against loss of battery and GND
- Reverse battery protection
- Short-circuit protection
- Overtemperature protection
- Overvoltage protection
- ESD protection
- (Partially) Proportional load current sense

Key Benefits

- Real 24V requirements fulfillment
- Benchmark energy robustness
- Vast product portfolio for high and low-current loads
- Integrated protection and diagnostic features
- Current sense with enhanced k_{ILIS} accuracy with calibration
- Robust green package
- Easy design-in
- Optimized electromagnetic compatibility

Multi Half-Bridge Driver ICs for DC Brush Motors

Voltage Class: 12V/24V

DC brush motor controls that drive low load currents (< 1A) are best implemented using cost-effective and PCB space-saving IC solutions. All Infineon products have protection features implemented and facilitate diagnostics either via a status flag or SPI.

Key Features

- Product portfolio offers drivers with 2, 4, 6 and 10 half-bridge outputs
- Direct driving and SPI control are possible
- Optimized products for current saving are available
- Overtemperature protection

Target Applications

- HVAC flap control
- Mirror x-y-adjustment
- Idle speed control
- DC brush motor with maximum currents below 1A

Key Benefits

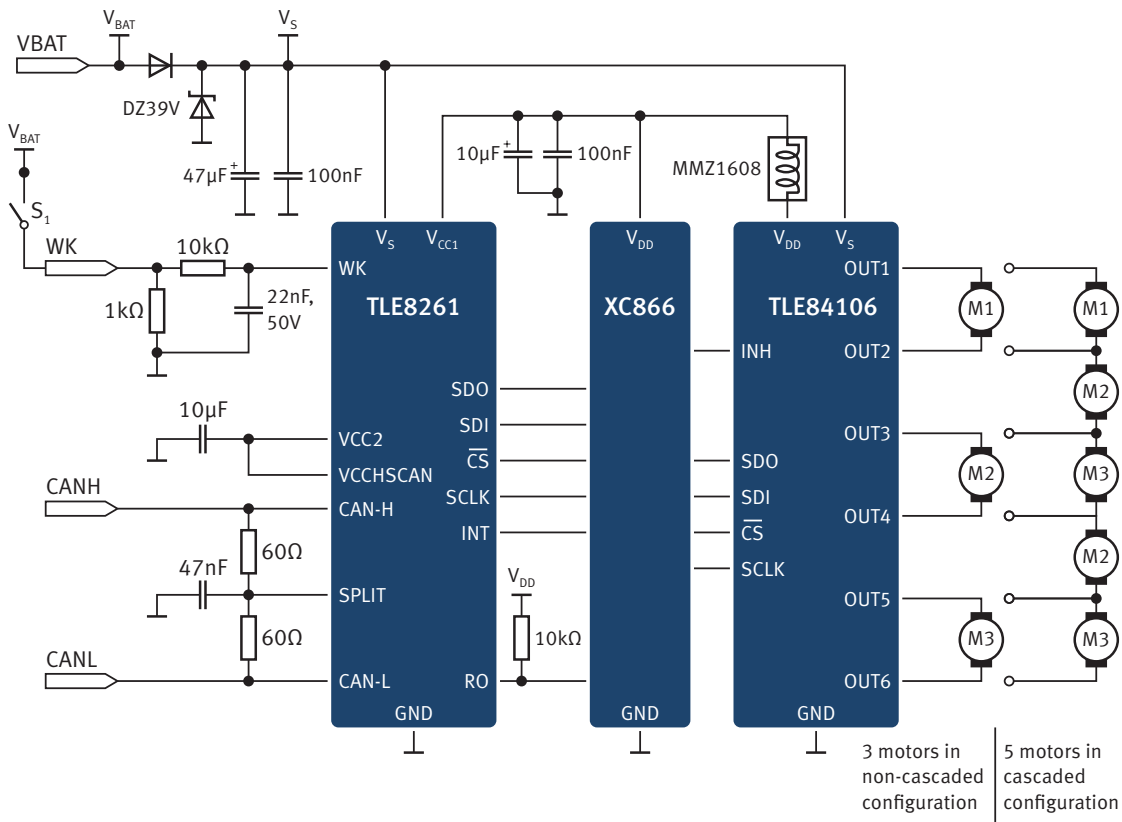

- Scalability for products with family concept (e.g. TLE841xxEL)
- Driver can be adapted to ECU concept (SPI vs. direct driving)
- Longer IC lifetime ensured by thermal shutdown

Evaluation Boards available for Multi Half-Bridge Driver ICs

Driver ICs for Bipolar Stepper Motors

Voltage Class: 12V/24V

In body electronics, stepper motors are featured in headlight beam leveling and HVAC flap systems. They are also widely used in engine management systems. All drivers offer protection and diagnosis and can be used for small stepper motors up to 1A. Rpm management – where a motor-driven valve in the bypass air inlet controls idling speed – is also a typical application.

Key Features

- Products for 12V and 24V applications are available
- Drivers feature full and half-step modes
- All drivers have integrated overtemperature protection
- Diagnosis possible via status pin

Key Benefits

- Longer IC lifetime ensured by thermal shutdown
- Failure detection possible

Target Applications

- Bipolar stepper motor driver for up to 1A
- Light adjustment
- Idle speed control for motorbikes or small cars

Evaluation Boards available for Stepper Driver ICs

- TLE4729 Evaluation Kit V1.0

Trilith IC Family – BTM77xxG(P)/BTM78xxK

Motor Bridge with Protection and Diagnostics (operation up to 42V)

The Trilith IC devices combine two high-side and two low-side switches in one package. They are geared to drive high-current DC motors in an H-bridge configuration but can also be used as single independent switches. All Trilith ICs include overcurrent and overtemperature protection for the high-side switches. With regard to the low-side switches, the user can choose between fast unprotected MOSFETs for PWM applications as well as protected low-side switches for lower frequencies.

1) AEC-grade 3 – T_j = 110°C
 UV = Undervoltage (high-side)
 OT = Overtemperature
 SC = Short-Circuit
 OL = Open-Load

Please contact your sales-representative for further information on special peak voltage requirements such as jump-start and load dump.

Key Features

- Quad D-MOS switch driver
- Configurable as quad-switch, dual half-bridge or full-bridge for motor control
- $R_{DS(on)}$ in PG-DSO28 package
 - Path: 110–210m Ω (typ. at $T_j = 25^\circ\text{C}$)
 - 260–500m Ω (max. at $T_j = 150^\circ\text{C}$)
- $R_{DS(on)}$ in PG-TO263-15 package ($T_{jmax} = 110^\circ\text{C}$)
 - Path: 40–115m Ω (typ. at $T_j = 25^\circ\text{C}$)
 - 93–265m Ω (max. at $T_j = 110^\circ\text{C}$)
- Peak current up to 42A (typ. at 25°C)
- Very low quiescent current of 5 μA (typ. at 25°C)
- Operation up to 42V supply voltage
- PWM frequencies up to 1kHz (limited 20kHz)
- Status flag diagnosis
- Overcurrent limitation
- Overtemperature shutdown with hysteresis
- Short-circuit protection (up to 28V)
- Internal clamp diodes
- Undervoltage shutdown with hysteresis (high-side switch)

Key Benefits

- Flexible 4-fold switch (two high and two low-side switches)
- Configurable as easy-to-use DC motor bridge in one package
- High peak current capability
- Scalable portfolio

Applications

- Door lock
- Fuel flap lock
- Mirror flap
- Steering wheel lock
- Headrest adjustment

NovalithIC™ BTN89xxTA

New Integrated and Protected Half-Bridges with up to 40V Operating Voltage Range

Infineon's NovalithIC™ family has three new members: BTN8946TA, BTN8962TA and BTN8982TA. Based on the same concept as the existing BTN79xxB, the new products offer an extended operating voltage range, up to 40V, a lower $R_{DS(on)}$, down to 10mΩ, a faster switching time, down to 250ns, and an improved current sense accuracy, thanks to a new k_{ILIS} offset calibration method, maintaining pin-to-pin compatibility to all NovalithIC™ family members. These enhanced features and improved specifications allow a significant reduction of power losses and an improvement in relation to EMC emissions, thereby further increasing the already extensive application areas for these products.

Key Features

- Integrated half-bridge
- PWM capability combined with active freewheeling
- Switched mode current limitation for reduced power dissipation in overcurrent situation
- Overtemperature shutdown with latch behavior
- Driver circuit with logic level inputs

Applications

- Unidirectional DC brush motors
- Bidirectional DC brush motors
- Brushless (BLDC) motors

Product Table

Product Type	$V_{S(op)}$ [V]	$R_{(on)}$ path (typ.) [mΩ]	I_D (lim) [A]	I_q (typ.) [μA]	Switch time (typ.) [μs]	Diagnosis	Protect	Packages
BTN8946TA	5.5–40.0	6.7 ¹⁾	42	7	0.25	OT, OC, CS	UV, OT, OC	PG-T0263-7

Supply for 24V Applications

Linear Voltage Regulator, DC/DC Converters

As part of the widest voltage regulator portfolio available in the automotive market, we offer suitable supply devices for 24V applications. The 24V portfolio consists of single-output and dual-output linear voltage regulators and DC/DC converters. They can withstand load dumps of up to 60V without an additional suppressor diode. All devices offer protection in harsh environments against short-circuits, overtemperature etc. All parts come in robust RoHS-compliant packages.

Linear Regulators	
TLE4267	400mA/5V single-output with EN and RES
TLE4270-2	600mA/5V single-output with RES
TLE4271-2	600mA/5V single-output with EN, RES, and WD
TLE4471	System supply 500mA/5V with 2x5V-trackers, EN, RES, and WD
TLE4476	350mA/3.3V and 430mA/5V dual-output with EN
DC/DC Converters	
TLE6368G2	Multiple output system supply for microcontrollers and sensors (e.g. EMS, EPS etc.)
TLE6389-2/-3	Low quiescent current supply (e.g. dashboard)

Key Features

- 60V supply voltage
- Overvoltage protection
- Short-circuit protection
- Current limitation
- Overtemperature protection
- ESD protection

Applications

- Truck body computer
- Engine management unit
- Sensor supply
- Multilevel system supply (TLE4471xx)
- HVAC
- EPS

Key Benefits

- Real 24V requirements fulfillment
- AEC-Q100 qualified
- Robust RoHS packages

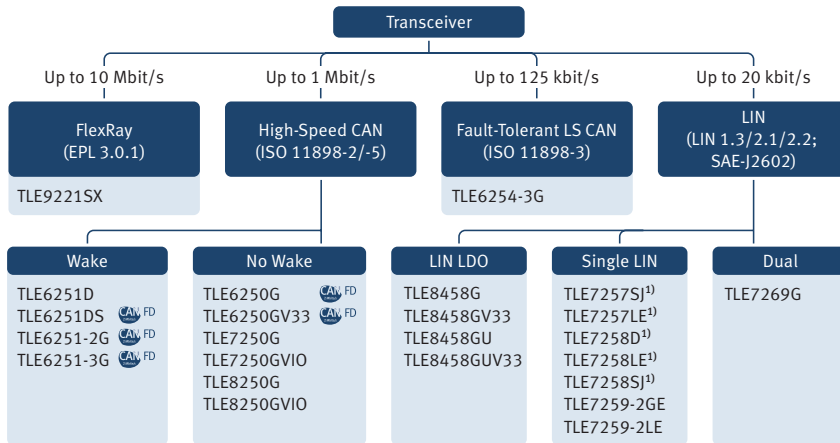

CAN & LIN Transceivers

The Perfect Match for In-Vehicle Networking

Transceivers are the link between the protocol unit (the controller) and the physical transmission medium (bus cable). In addition to their driving function (reception/transmission of signals from the bus to ECU), the transceivers also provide a wide range of protective and fault diagnosis functions.

Selection Tree for Automotive Transceivers

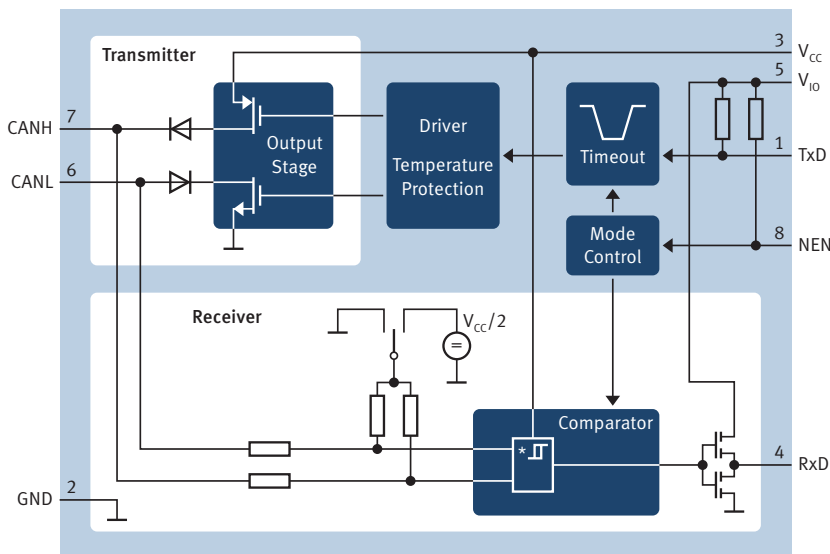

1) in development

Key Features and Key Benefits

- Excellent EMC
- Outstanding ESD robustness
- Highest quality standard
- Broad product portfolio and family concept
- Low quiescent current requirement

Block Diagram Example of a High-Speed CAN: TLE7250GVIO

Make Your Application Wireless

Infineon offers a comprehensive and complementary product portfolio of transmitter, receiver and transceiver products for the major sub-1GHz frequency bands. This means you can always find the right product with the best cost/feature ratio for all the different application requirements from consumer to automotive.

Our portfolio extends from a high number of standard ASK/FSK transmitter, receiver and transceiver products with different feature sets and operating temperature ranges up to the highly integrated and feature-rich SmartLEWIS™ family. SmartLEWIS™ stands for Smart Low Energy Wireless Systems and its family members for the next generation of wireless control products that have the highest level of integration and functionality for reducing system complexity and current consumption in an intelligent way.

- The SmartLEWIS™ TX is a multi-channel and multi-band transmitter with selectable output power.
- The SmartLEWIS™ MCU products are multi-band transmitters with an embedded 8051 microcontroller, on-chip memory and many exciting peripherals, thereby realizing a highly-efficient single chip for remote control applications.
- The SmartLEWIS™ RX products have an integrated digital baseband, enabling autonomous receive functionality without the need to wake up the microcontroller and thereby minimizing the system current consumption. Furthermore, multi-protocol handling enables these devices to receive signals from different applications.
- The SmartLEWIS™ RX+ products feature enhanced sensitivity and a reduced bill-of-material compared to their SmartLEWIS™ RX predecessors while keeping the high level of functionality.
- The SmartLEWIS™ TRX is a multi-channel transceiver with the highest functionality, high sensitivity and selectable output power.

Applications

- Remote Keyless Entry (RKE)
- Tire pressure monitoring
- Replacement of wireline connections
- Any kind of wireless low data rate application

Key Benefits

- Complementary product portfolio for sub-1GHz RF
- Lowest current consumption
- Best range
- High automotive proven quality
- Comprehensive documentation and easy-to-use development tooling

	Product Type	Description
Transmitter	TDK510x/F	ASK/FSK Transmitter family for low power (2–5dBm), temperature range -40 ... 125°C
	TDK511x F	ASK/FSK Transmitter family for high power (10dBm), temperature range -40 ... 125°C
	TDA7100	ASK/FSK Transmitter family for low power (2–5dBm), temperature range -20 ... 70°C
	TDA711x/F	ASK/FSK Transmitter family for high power (10dBm), temperature range -40 ... 85°C
SmartLEWIS™ TX	TDA5150	ASK/FSK Transmitter, multi-channel, multi-band, multi-power, temperature range -40 ... 85°C
SmartLEWIS™ MCU	PMA5105	ASK/FSK Transmitter with embedded 8051 microcontroller, temperature range -40 ... 125°C
	PMA5110	ASK/FSK Transmitter with embedded 8051 microcontroller and 125kHz LF receiver, temperature range -40 ... 125°C
	PMA7105	ASK/FSK Transmitter with embedded 8051 microcontroller, temperature range -40 ... 85°C
	PMA7106	ASK/FSK Transmitter with embedded 8051 microcontroller and 10-bit ADC, Temperature range -40 ... 85°C
	PMA7107	ASK/FSK Transmitter with embedded 8051 microcontroller and 125kHz LF receiver, temperature range -40 ... 85°C
	PMA7110	ASK/FSK Transmitter with embedded 8051 microcontroller, 10-bit ADC and 125kHz LF receiver, temperature range -40 ... 85°C
Receiver	TDA520x	ASK Receiver family, temperature range -40 ... 85°C
	TDA521x	ASK/FSK Receiver family, temperature range -40 ... 105°C
	TDA522x	ASK/FSK Receiver family with switchable peak detector, temperature range -40 ... 105°C
	TDA7200	ASK/FSK Receiver family with switchable peak detector, temperature range -20 ... 70°C
	TDA7210/V	ASK/FSK Receiver family, temperature range -40 ... 85°C, TSSOP and VQFN package
SmartLEWIS™ RX	TDA5230/31	Receiver family with digital baseband processing, multi-channel, Temperature range -40–105°C
SmartLEWIS™ RX+	TDA5225	High Sensitivity Receiver, multi-channel, temperature range -40 ... 105°C
	TDA5235	High Sensitivity Receiver with digital baseband processing, single channel, Temperature range -40 ... 105°C
	TDA5240	High Sensitivity Receiver with digital baseband processing, multi-channel, Temperature range -40 ... 105°C
Transceiver	TDA525x	ASK/FSK Transceiver family, single-channel, temperature range -40 ... 85°C
	TDA7255V	ASK/FSK Transceiver family, single-channel, VQFN package, temperature range -40 ... 85°C
SmartLEWIS™ TRX	TDA5340	High Sensitivity Transceiver with digital baseband processing, multi-channel, Temperature range -40 ... 110°C

TDA5225_915_5_BOARD	RX	915		ASK/FSK	SP000775162
SmartLEWIS™ SIB BOARD	Interface	Universal			SP000409156

A full TDA5240/35/25 evaluation kit comprises the RF board with the required frequency and the system interface board (SmartLEWIS™ SIB Board), which must be ordered separately.

Standard Transceiver Boards/Kits

Board/Kit Type	RX/TX/MCU	Frequency [MHz]	Output Power [dBm]	Modulation	Order Code
TDA5251-TDA5251_315 Kit	TRX	315	5	ASK/FSK	SP000078507
TDA5255-TDA5255_434 Kit	TRX	434	5	ASK/FSK	SP000015023
TDA7255V_TDA7255V_434_10	TRX	434	10	ASK/FSK	SP000745294
TDA5250-TDA5250_868 Kit	TRX	868	5	ASK/FSK	SP000486986
TDA5252-TDA5252_915 Kit	TRX	915	5	ASK/FSK	SP000434768

SmartLEWIS™ TRX Boards/Kits

Board/Kit Type	RX/TX/MCU	Frequency [MHz]	Output Power [dBm]	Modulation	Order Code
TDA5340_315_BOARD	TRX	315	10	ASK/FSK	SP000926798
TDA5340_434_BOARD	TRX	434	10	ASK/FSK	SP000926802
TDA5340_470_BOARD	TRX	470	10	ASK/FSK	SP000997724
TDA5340_868_BOARD	TRX	868	13	ASK/FSK	SP000926808
TDA5340_915_BOARD	TRX	915	13	ASK/FSK	SP000926812

The evaluation board includes one TDA5340 RF board and one UWLINK interface board. You do not need to order a separate interface board. If you want to establish a wireless connection, you will have to order two evaluation boards.

Three-wire Speed Sensors TLE492x and TLE4957

Self-calibrating, Highly-sensitive Hall Sensor

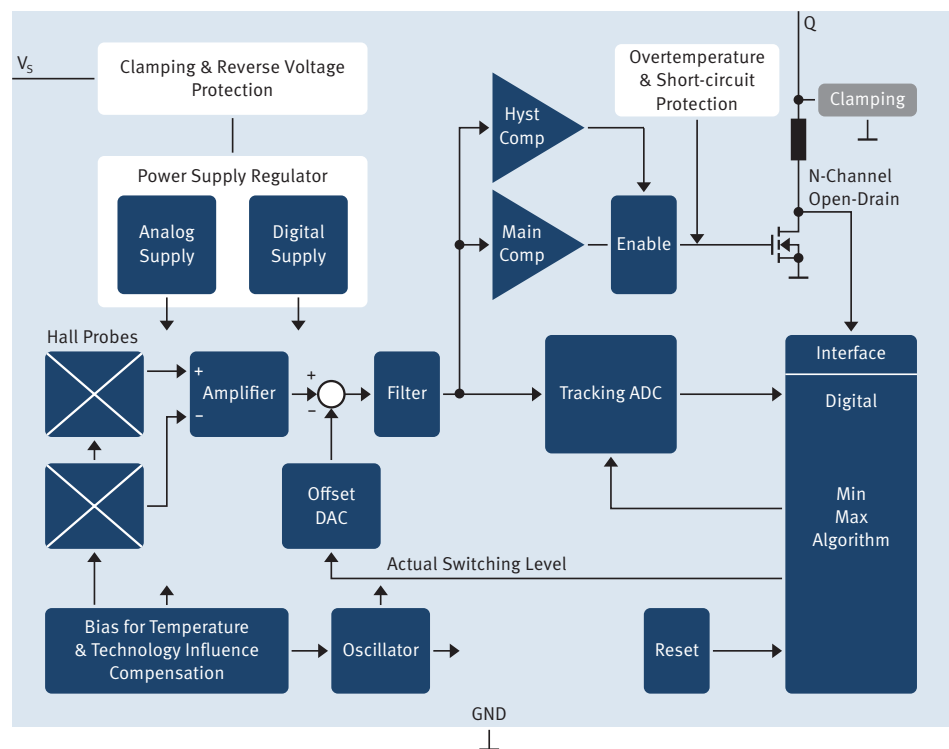

The TLE492x family and TLE4957 are active Hall sensors suited to detecting the motion and position of ferromagnetic and permanent magnet structures. An additional self-calibrating module has been implemented to achieve optimum accuracy during normal running operation. It comes in a 3-pin package for the supply voltage and an open-drain output. Package options with integrated back-bias magnets (iBB) for easier use and design are also available.

Key Features

- Advanced performance via dynamic self-calibration principle
- No external components required for operation
- 0.001kHz low cut-off frequency
- Fast start-up time (2nd edge detection)
- Low voltage supply (3.3V)
- Output short-circuit, reverse-polarity and overtemperature protected
- Digital output signal (voltage interface)
- High sensitivity ($B_{\min} < 1.5\text{mT}$)
- Low jitter typ. $\pm 0.11\%$ at 10mT
- Module style package with two integrated 47nF capacitors between V_s and GND
- Availability of integrated back-bias magnet package options

Key Applications

- Speed and position (i.e. crankshaft)
- Transmission speed
- Speedometer

TLE496x Family in an SOT23 Package

Hall Switches for Contactless Position Detection, Index Counting and BLDC Commutation

Designed with new technology, the family offers high-voltage capabilities with very small current consumption. The products can be operated from unregulated power supplies, thereby offering our customers a unique freedom of system design.

The superior overvoltage of up to 42V makes additional resistors redundant. This allows the reduction of external, passive protection components which reduces system PCB space, along with design and inspection costs.

With the typical current consumption of 1.6mA, the family offers a reduction of over 50% compared to similar products and is therefore ideally suited for upcoming energy-sensitive systems.

Aimed at the automotive market with high quality requirements, both strong ESD functionality and a high stability of magnetic thresholds over temperature and lifetime have been realized.

Key Features

- 3.0V to 32V operating supply voltage
- Operation from unregulated power supply
- Reverse polarity protection (-18V)
- Overvoltage capability up to 42V without external resistor
- Small current consumption (1.6mA)
- Output short-circuit & overtemperature protection
- Active error compensation
- High stability of magnetic thresholds
- High ESD performance
- Small SMD package (SOT23)

Key Applications

- BLDC (commutation)
- Window lifter (index counting)
- Power closing (index counting)
- Gear stick (position detection)
- Seat belt (position detection)

Key Benefits

- Low current consumption
- High resistance to mechanical stress due to active error compensation
- High repeatability of magnetic thresholds
- Small package enables very compact system size

Angle Sensors

iGMR Sensors

Infineon's iGMR sensors are the ideal choices for applications with a wide angle range, such as BLDC motor or steering sensors. The sensors are pre-calibrated and ready to use. A different level of signal-processing integration allows the optimization of system partitioning.

iAMR Sensors

Infineon's iAMR sensors are particularly well suited for applications with a small angle range, such as wipers, pedals and flaps. Their excellent accuracy can also be beneficial to some BLDC applications where 180° information is sufficient.

Applications

- Steering angle
- Brushless DC motor commutation (e.g. Electric Power Steering (EPS))
- Rotary switch
- General angular sensing
- Incremental or absolute magnetic encoder
- Contactless angle measurement
- Wiper positioning
- Rotational position measurement

Key Features

- Integrated GMR (iGMR) technology
- Full 0° to 360° angle measurement
- Pre-calibrated sensors
- High angle resolution
- Fast update rates
- Multiple interfaces available
 - SPI-compatible synchronous serial communication (SSC). Bidirectional up to 8Mbit/s
 - Pulse Width Modulation (PWM)
 - Hall Switch Mode (HSM) for motor commutation
 - Incremental interface (IIF)
 - Analog differential or single-ended
- Integrated angle calculation with CORDIC algorithm
- Temperature compensation and auto-calibration algorithm
- Diagnoses function for sensor elements and circuitry with PRO-SIL™ support
- Automotive-qualified: -40 ... 150°C (junction temperature)
- ESD > 2kV (HBM)
- Green package with lead-free (Pb-free) plating

Product Type	Sin/Cos Output	Angle Output	Second Interface	Accuracy

SP37

Tire Pressure Sensor for Tire Pressure Monitoring System (TPMS)

The SP37 is a highly integrated device which performs all necessary functions for a Tire Pressure Monitoring System (TPMS) wheel module suited for high-volume applications. The device contains the sensing elements, the microcontroller, the LF receiver, the RF transmitter and more in a single package requiring only few external components to complete a TPMS module.

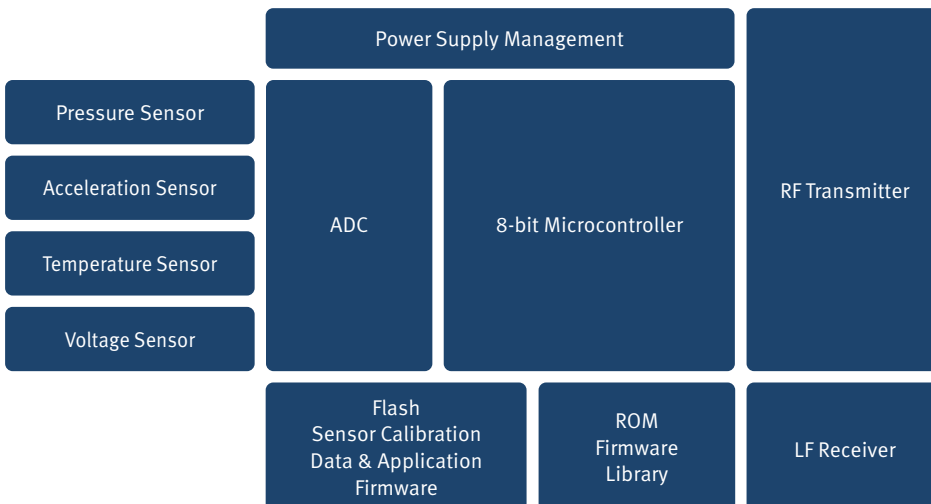

The SP37 measures pressure, radial acceleration, temperature and supply voltage, and is compliant to the RoHS standard with a green package.

Measurable pressures vary from light vehicle to heavy truck applications offered by a variety of product variants with different pressure ranges (100–450kPa, 100–900kPa and 100–1300kPa).

Key Features

- Pressure sensor
- Radial acceleration sensor
- Temperature sensor
- Supply voltage sensor
- Embedded 8051-compatible 8-bit microcontroller
- 6KB on-chip FLASH memory
- 256Byte RAM
- 315 and 434MHz FSK/ASK
- RF transmitter
- Selectable output power of 5 or 8dBm
- 125kHz ASK high-sensitivity LF receiver
- Advanced power control/wake-up system to minimize battery consumption
- Ultra-low standby current of <math>< 0.7\mu\text{A}</math>
- Supply voltage range of 1.9–3.6V
- Operating temperature range of -40 ... 125°C
- PG-DSOSP-14-6 package
- RoHS-compliant, green package

Product Type	Pressure Range	Key Benefits
SP370-25-106-0	100–450kPa	<ul style="list-style-type: none"> ■ Single-pressure ■ Field-programmable via LF ■ RF data rate up to 20kbit/s
SP370-25-116-0	100–900kPa	<ul style="list-style-type: none"> ■ Automatic pressure ■ Field-programmable via LF ■ RF data rate up to 20kbit/s
SP370-23-156-0	100–1300kPa	<ul style="list-style-type: none"> ■ Single-pressure ■ RF data rate up to 10kbit/s
SP270-25-256-0	SP27 100–1300kPa (Non-TPMS Product)	<ul style="list-style-type: none"> ■ Without accelerometer sensing ■ Without wireless communication capabilities (RF and LF)

Linear Hall Sensor Family

Programmable Analog and Digital Linear Hall Sensor Family

Our family of TLE499x linear Hall ICs is tailored to the needs of highly accurate angular and linear position detection and current measurement applications. Each product measures the vertical component of a magnetic field and outputs a signal that is directly proportional to the magnetic field. These programmable linear Hall sensors come with different interface options: TLE4997 features radiometric analog output while TLE4998P comes with pulse width modulation (PWM), TLE4998S with single edge nibble transmission (SENT) and TLE4998C with short PWM codes (SPC). These high-precision 12-bit resolution linear Hall sensors feature EEPROM memory for flexible programming across a wide range of parameters.

Thanks to digital signal processing based on a 20-bit DSP architecture plus digital temperature compensation, these sensors deliver outstanding temperature stability compared to similar compensation methods. TLE4998 also includes stress compensation to withstand stress effects from the package, such as moisture, thereby ensuring best-in-class accuracy over the device's lifetime.

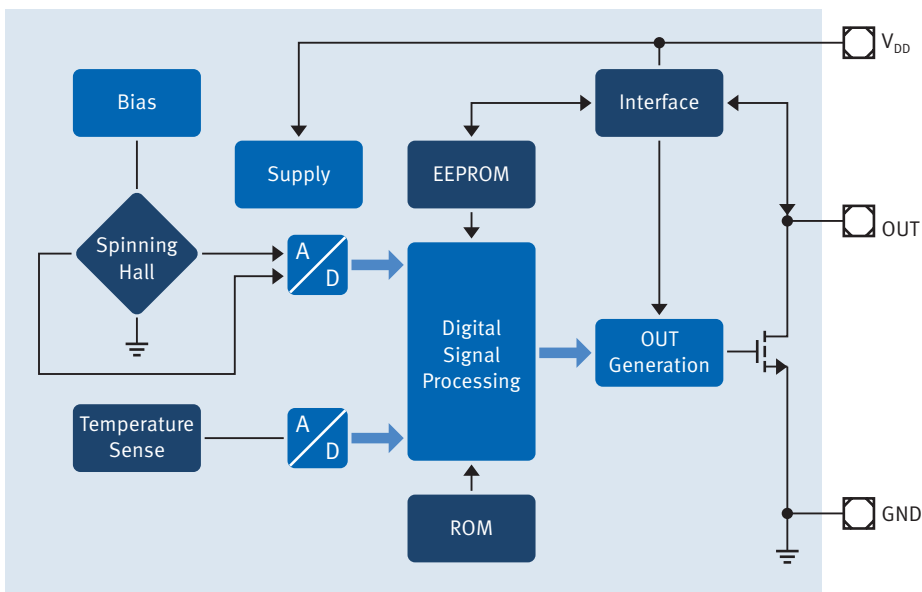

Key Features

- 20-bit digital signal processing
- 12-bit overall resolution at wide output range
- 3 magnetic ranges: $\pm 50/100/200\text{mT}$
- Programmable transfer function (gain, offset), clamping, bandwidth and temperature characteristic
- Digital temperature compensation
- Exceptionally low drift of offset and output signal
- High immunity against EMC, ESD and mechanical stress (stress compensation)
- On-board diagnosis
- Wide temperature range: -40°C to 150°C
- Analog and various digital interface options available (PWM – Pulse Width Modulation, SENT – Single Edge Nibble Transmission, SPC – Short PWM Codes, Single and Dual-Die SMD package)

Key Applications

- Suspension control
- Detecting gear stick/lever positions
- Detecting liquid levels in fuel tanks
- Battery management
- Motor control
- Detecting linear and angular position
- Detecting pedal and throttle position
- Steering torque measurement
- Headlight leveling
- High-current sensing
- Seat position and occupant detection

Product Type	Program-mable	Number of Pins	Sensitivity	Magnetic Offset	Supply Voltage (extended range)	Package
TLE4997	EEPROM	3	± 12.5 to ± 300 mV/mT	$< \pm 400$ μ T	5V $\pm 10\%$ (7V)	PG-SSO-3-10 PG-TDSO-8
TLE4998P	EEPROM	3/4	± 0.2 to $\pm 6\%$ /mT	$< \pm 400$ μ T	5V $\pm 10\%$ (16V)	PG-SSO-3-10 PG-SSO-4-1 PG-SSO-3-9 (2 Capacitors) PG-TDSO-8
TLE4998S	EEPROM	3/4	± 8.2 to ± 245 LSB/mT	$< \pm 400$ μ T	5V $\pm 10\%$ (16V)	PG-SSO-3-10 PG-SSO-4-1 PG-SSO-3-9 (2 Capacitors) PG-TDSO-8
TLE4998C	EEPROM	3/4	± 8.2 to ± 245 LSB/mT	$< \pm 400$ μ T	5V $\pm 10\%$ (16V)	PG-SSO-3-10 PG-SSO-4-1 PG-SSO-3-9 (2 Capacitors) PG-TDSO-8

Integrated Pressure Sensor ICs

Our integrated pressure sensor family uses unique multiple surface micro-machined capacitive sensor cell arrays that support powerful self-diagnosis features, such as the mechanical and electrical verification of sensor functionality. Monolithic integration onto a single chip enables state-of-the-art production using a standard automotive-qualified BiCMOS process. Sophisticated sensor cell design combined with fully digital signal conditioning and processing based on high-volume production flows ensures superior quality over the entire lifecycle.

These pressure sensors are ideal for a wide range of applications in the automotive and industrial sectors. The analog and digital interfaces of our pressure sensors provide customers with a high degree of design flexibility and enable manufacturers to meet evolving market demands.

Our digital interface portfolio ranges from PSI5 for safety products (such as side crash detection and pedestrian protection systems) to SPI for automotive powertrain and body applications (such as Barometric Air Pressure (BAP), fuel vapor and seat comfort systems) all the way up to I²C and SENT with SPC functionality for upcoming engine management products (such as MAP, Turbo MAP (with NTC) and secondary air valves).

Product Type	Pressure Range [kPa]	Max. Accuracy [kPa]	Max. Operating Temperature [°C]
KP23x	40–115	1.0	125
KP236N6165	60–165	1.0	125
KP21x	10–115	1.0	140
KP22x	10–400	2.5	140
KP253	60–165	1.0	125
KP254	40–115	1.5	125
KP256	60–165	1.0	125

Key Applications

- BAP
- Seat comfort systems
- Fuel vapor
- Idle stop

KP21x/KP22x

Analog Manifold Air Pressure Sensor IC Family (MAP + Turbo MAP)

Features

- Manifold air pressure measurement – MAP and Turbo MAP
- Excellent accuracy of up to 1.0kPa over a large temperature range
- Ratiometric analog voltage output proportional to the applied pressure

- Output signal fully compensated across pressure and temperature ranges
- Pressure range from 10 to 400kPa
- Temperature range from -40 ... 140°C
- Output clamping (optional)
- Complete product family available with multiple transfer function
- Reverse polarity protection
- Green SMD package

KP23x

Analog Barometric Air Pressure (BAP) Sensor IC Family

Features

- Absolute air pressure measurement
- Excellent accuracy of 1.0kPa over a large temperature range
- Ratiometric analog voltage output proportional to the applied pressure
- Output signal fully compensated across pressure and temperature ranges
- Pressure range from 40 to 115kPa
- Temperature range from -40 ... 125°C
- Serial service interface
- Open Bond Detection for supply and GND (OBD)
- Self-diagnosis routines
- Inverse polarity protection
- Green SMD package

KP25x

SPI Digital Barometric Air Pressure Sensor IC Family

Features

- SPI – digital interface
- Absolute air pressure measurement
- Excellent accuracy of 1.0kPa over a large temperature range
- Output signal fully compensated across pressure and temperature ranges
- Pressure range from 40 to 165kPa
- Temperature range -40 ... 125°C
- Self-diagnosis routines & diagnosis codes
- Reverse polarity protection
- Diagnosis checks during operation
- Green SMD package

The Perfect Microcontroller Family for Your 24V – 60V Applications

We offer a broad portfolio of 8-bit to 32-bit microcontrollers suitable for any kind of sub-application in the transportation area.

Highest Quality Microcontroller Portfolio Drives Your Ideas to Business

- Leading real-time performance
- Outstanding peripherals
- Complete portfolio
- Superior quality
- Ease-of-use and expert support

32-bit Microcontrollers – TriCore™ Family

The Infineon TriCore™ family is optimized for 3-phase motor control applications in the industrial and automotive segments, including Permanent Magnet Synchronous Motors (PMSM) and AC Induction Motors (ACIM).

Application Segments

Industrial

- AC Servo drives
- PLC
- Mobile controllers
- Process control

Automotive

- Steering (e.g. EPS)
- Electric propulsion for hybrid and electric vehicles

Product Benefits

- High performance speeds up your motor control algorithm
- TriCore™ DSP instruction set for multiple motor control algorithms (e.g. Park, Clarke, Space vector modulation)
- Software library for Field-Oriented Control (“e-motor module”) facilitates fast implementation
- Supports safety-critical systems in achieving IEC 61508/ISO 26262 compliance
- Free tool chain: www.infineon.com/davebench

XMC Family – 32-bit Industrial Microcontrollers Based on ARM® Cortex™

XMC1000 Microcontroller Family – 8-bit Price for 32-bit Performance

The XMC1000 product family integrates the ARM® Cortex™-M0 core into a leading-edge 65nm manufacturing process to overcome the limitations of today's 8-bit designs. The XMC1000 is a full member of the XMC family which was introduced in early 2012 and uses the same peripherals, such as timers, A/D converters or those for serial communication. As is the case with XMC4000 products, the DAVE™ development environment is available as a free download for SW development.

Within its market segment, the XMC1000 offer the largest spectrum of Flash memory variants from 8KB to 200KB. Three product series cover a range of application fields. The XMC1100 series is tailored for an easy entry into the XMC world. The XMC1200 features peripherals for LED lighting and HMI designs, while the XMC1300 series addresses the needs of real-time control applications in the field of motor control or digital power conversion.

Key Features

- 32-bit ARM® Cortex™-M0, 32MHz
- 8KB to 200KB Flash memory – the most scalable Flash portfolio in the low-end segment
- AES 128-bit secure loader for SW IP protection
- Patented LED color control engine
- Leading-edge XMC mixed signal and timer peripherals
- IEC 60730 Class B-compliant
- Peripherals for touch and LED display control
- 64MHz MATH co-processor for advanced control loops (CORDIC / DIVIDE)
- Extended temperature range up to 105°C

Application Fields

- Motor control
- LED lighting
- Digital power conversion
- Smart sensors
- Touch control
- LED displays
- General purpose

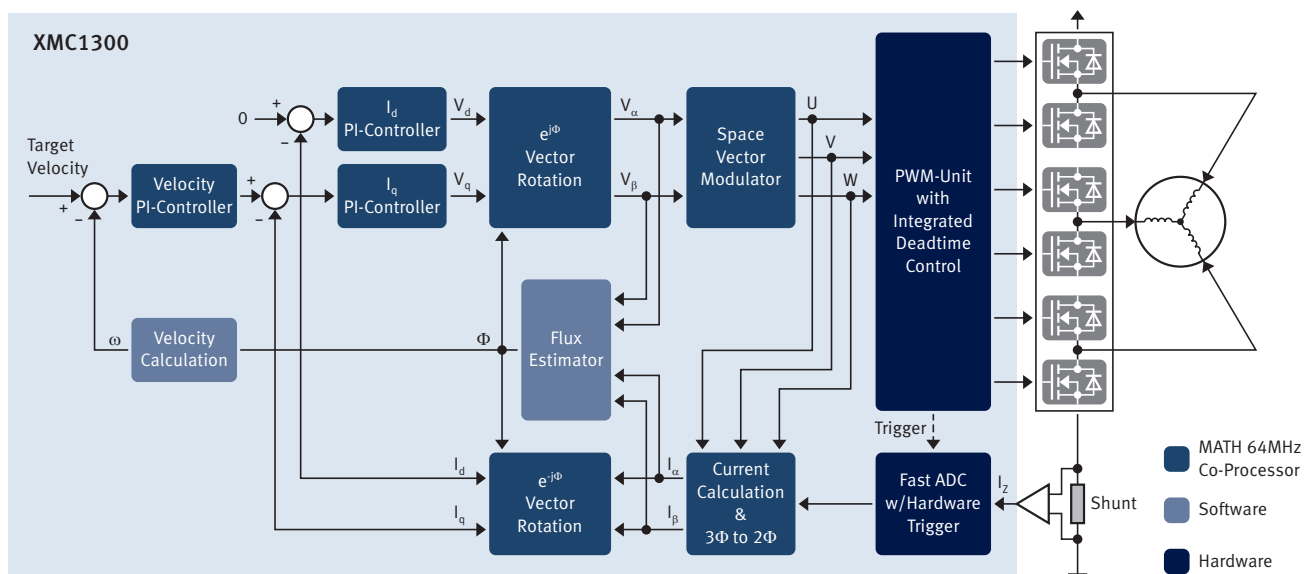

Packages

- TSSOP 16-pin, 28-pin, 38-pin

XMC4000 Microcontroller Family

The XMC4000 family marks a cornerstone in microcontroller design for real-time critical systems. With the XMC4000, Infineon combines its leading-edge peripheral set with an industry-standard ARM® Cortex™-M4 core. Featuring Infineon’s highly advanced peripheral set – configurable to specific applications and designed to minimize the load on the CPU – the XMC4000 provides the horsepower for running the most sophisticated algorithms for today’s industrial control solutions. Family members even operate in high-temperature environments of up to 125°C, granting you access to their exceptional performance in all corners of your system.

All microcontrollers in the XMC4000 family offer a number of options with respect to CPU frequency, memory density, peripheral functions and number of I/Os. They are SW-compatible and offer pin-compatibility to their neighbor series for one particular package. Starting with the XMC4500 series with a mid to high-end feature set, the latest releases – the XMC4400, 4200 and 4100 – offer additional mid to lower-end feature/cost options and the most advanced high-resolution PWM module, reaching a resolution of 150ps.

16-bit Microcontrollers – XC2000/XE166 Family

The highly scalable XC2000/XE166 family is ideal for a wide range of motor control designs, including applications based on DC brushed control, DC servo control, AC induction scalar-slip control, BLDC commutated control, permanent magnet AC field-oriented control and AC induction field-oriented control.

Application Segments

Industrial

- Inverters
- Elevators
- Spindle drives
- PLC, Servo, CNC

Automotive

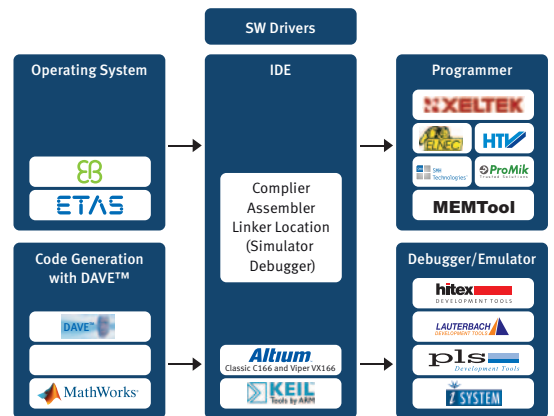

- Steering (e.g. EPS)
- Heating, ventilation, air-conditioning (e.g. HVAC) control systems
- Pumps

Product Benefits

- Reduced BOM cost – the XE166/XC2000 family offers up to 4 PWM units with separate time bases for the combined control of two motors and the PFC algorithm on one chip
- High performance speeds up your motor control algorithm
- Two independent ADC units are triggered by the PWM timers
- The MAC unit provides DSP functionality via seamless integration into the CPU instruction set
- Supports safety-critical systems in achieving IEC 61508/ISO 26262 compliance
- Free tool chain: www.infineon.com/davebench

Free Tool Chain

8-bit Microcontrollers – XC800 Family

The feature-rich XC800 microcontroller with its optimized peripheral set supports highly cost-efficient solutions in the industrial and automotive segments.

Application Segments

- Home appliances
- Fans
- eBikes
- Pumps
- Stepper gauges
- Valve control

Product Benefits

- Up to 50% system cost savings - Field-Oriented Control (FOC) at lowest cost
- Portfolio from 2KB to 64KB Flash and from 16-pin to 64-pin package options, qualified
- AEC-Q100 and up to an ambient temperature of 150°C
- Optimized peripherals and code library in ROM for Field-Oriented Control
- Two PWM units with separate time bases for combining motor control and power factor correction algorithms on one chip
- For use in IEC 60730/Class B-certified applications
- Low-cost stepper motor drive
- Free tool chain: www.infineon.com/davebench

Sensorless Field-Oriented Control for 3-Phase Motor e.g. PMSM Motor

Free Tool Chain

- DAVE™ – Infineon's latest embedded software solution
- Free XC800 Compiler
 - Complete Keil tool chain
 - Up to 64k code
 - 3-month support

Support Tools

Board Name	Products	Description	Order No.
 TLE5011 Evalkit	TLE5011 Angle sensor	The kit consists of a PGSISI box and an evaluation board and allows evaluation of an integrated Giant Magneto Resistance (iGMR) angle sensor. The evaluation board (PCB) with an angle sensor and rotating magnet is available separately (without PGSISI box).	TLE5011 Evalkit SP000634330 TLE5011 Evalboard (PCB) SP000634322
 TLE5012 Evalkit	TLE5012 Angle sensor	The kit consists of a PGSISI box and an evaluation board and allows evaluation of an integrated Giant Magneto Resistance (iGMR) angle sensor. The evaluation board (PCB) with an angle sensor and rotating magnet is available separately (without PGSISI box).	TLE5012 Evalkit SP000634334 TLE5012 Evalboard (PCB) SP000634326
 SP37 development kit	SP37 Tire pressure sensor	The SP37 development kit enables evaluation of the entire feature-set of the tire pressure sensor SP37, such as RF transmitter and LF receiver functionality. Furthermore, it also allows software development and in-circuit debugging. The development kit includes the required evaluation hardware, SP37 devices, an integrated software development environment, documentation and a selection of sample software.	SP37-315-8 DEVELOP KIT SP000518282 (with 315MHz transmitter) SP37-434-8 DEVELOP KIT SP000518286 (with 434MHz transmitter)
 Triple half-bridge driver	TLE6208-3G Multi half-bridge driver	Designed specifically for automotive (mirror adjustment drive) and industrial motion control applications. The IC contains 3 half-bridge outputs. It provides access to all inputs and outputs with standard 4mm jacks.	Demoboard TLE6208-3G SP000427042
 Hex half-bridge driver	TLE6208-6G Multi half-bridge driver	Designed specifically for automotive (climate control flap drive) and industrial motion control applications. The IC contains 6 HSS channels and 6 LSS channels and can be used as a freely configurable switch, half-bridge or H-bridge driver. It provides access to all inputs and outputs with standard 4mm jacks.	Demoboard TLE6208-6G SP000427044
 Buck converter	TLE6389-2GV DC/DC converter	Multi-purpose buck controller for external PMOS switch, 5V or adjustable output voltage, maximum of 2.3A output current, low quiescent current.	Demoboard TLE6389-2GV SP000427060

DAVE™ – Digital Application Virtual Engineer

DAVE™ is a tool that helps engineers program Infineon microcontrollers. It provides intelligent wizards that configure chips to specific requirements and automatically generate C-code with appropriate driver functions for all on-chip peripherals and interrupt controls. DAVE™ interacts directly with the IDEs from leading tool suppliers and with Infineon’s free DAVE™ Bench tool chain. The DAVE™ mother system and DIP file for the microcontroller in question are needed to use DAVE™.
