

BTN9970 / BTN9990 Motor control shield

Arduino shield for evaluation

About this document

Scope and purpose

This document describes the usage of the Motor control shield for BTN9970 and BTN9990 V1.2. The board can be connected to an Arduino UNO board.

Intended audience

This document is intended for electronic engineers who want to evaluate a high current PMOS / NMOS half bridge with integrated driver.

Evaluation board

This board can be used during design in phase for customer projects, for evaluation and measurement of BTN9970 / BTN9990 device behavior.

PCB and auxiliary circuits are not optimized for final customer design.

Figure 1 BTN9970 / BTN9990 motor control shield stacked on Arduino UNO board

Important notice

Important notice

"Evaluation boards and reference boards" mean products embedded on a printed circuit board (PCB) for demonstration and / or evaluation purposes, which include, without limitation, demonstration, reference and evaluation boards, kits and design (collectively referred to as "reference board").

Environmental conditions have been considered in the design of the evaluation boards and reference boards provided by Infineon Technologies. The design of the evaluation boards and reference boards has been tested by Infineon Technologies only as described in this document. The design is not qualified in terms of safety requirements, manufacturing and operation over the entire operating temperature range or lifetime.

The evaluation boards and reference boards provided by Infineon Technologies are subject to functional testing only under typical load conditions. Evaluation boards and reference boards are not subject to the same procedures as regular products regarding returned material analysis (RMA), process change notification (PCN) and product discontinuation (PD).

Evaluation boards and reference boards are not commercialized products, and are solely intended for evaluation and testing purposes. In particular, they may not be used for reliability testing or production. The evaluation boards and reference boards may therefore not comply with CE or similar standards (including but not limited to the EMC Directive 2004/EC/108 and the EMC Act) and may not fulfill other requirements of the country in which they are operated by the customer. The customer must ensure that all evaluation boards and reference boards will be handled in a way which is compliant with the relevant requirements and standards of the country in which they are operated.

The evaluation boards and reference boards as well as the information provided in this document are addressed only to qualified and skilled technical staff, for laboratory usage, and must be used and managed according to the terms and conditions set forth in this document and in other related documentation supplied with the respective evaluation board and reference board.

It is the responsibility of the customer's technical departments to evaluate the suitability of the evaluation boards and reference boards for the intended application, and to evaluate the completeness and correctness of the information provided in this document with respect to such application.

The customer is obliged to ensure that the use of the evaluation boards and reference boards does not cause any harm to persons or third-party property.

The evaluation boards and reference boards and any information in this document is provided "as is" and Infineon Technologies disclaims any warranties, express or implied, including but not limited to warranties of non-infringement of third-party rights and implied warranties of fitness for any purpose, or for merchantability.

Infineon Technologies may not be responsible for any damages resulting from the use of the evaluation boards and reference boards and/or from any information provided in this document. The customer is obliged to defend, indemnify and hold Infineon Technologies harmless from and against any claims or damages arising out of or resulting from any use thereof.

Infineon Technologies reserves the right to modify this document and/or any information provided herein at any time without further notice.

Safety precautions

Safety precautions

Note: Please note the following warnings regarding the hazards associated with development systems.

Table 1 Safety precautions

	Caution
	The heat sink and device surfaces of the evaluation or reference board may become hot during testing. Hence, necessary precautions are required while handling the board. Failure to comply may cause injury.
	Only personnel familiar with the drive, power electronics and associated machinery should plan, install, commission and subsequently service the system. Failure to comply may result in personal injury and/or equipment damage.
	The evaluation or reference board contains parts and assemblies sensitive to electrostatic discharge (ESD). Electrostatic control precautions are required when installing, testing, servicing or repairing the assembly. Component damage may result if ESD control procedures are not followed. If you are not familiar with electrostatic control procedures, refer to the applicable ESD protection handbooks and guidelines.
	A drive that is incorrectly applied or installed can lead to component damage or reduction in product lifetime. Wiring or application errors such as undersizing the motor, supplying an incorrect or inadequate AC supply, or excessive ambient temperatures may result in system malfunction.

Warnings

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.

1 The board at a glance

1.1 Delivery content

The carton box includes one BTN9970/BTN9990 motor control board with marking:

BTN99xx

NovalithIC+

V 1.2

The Arduino UNO board and a power supply are not included. Information about the Arduino controller board can be found under: [Arduino - Home](#).

1.2 Block diagram

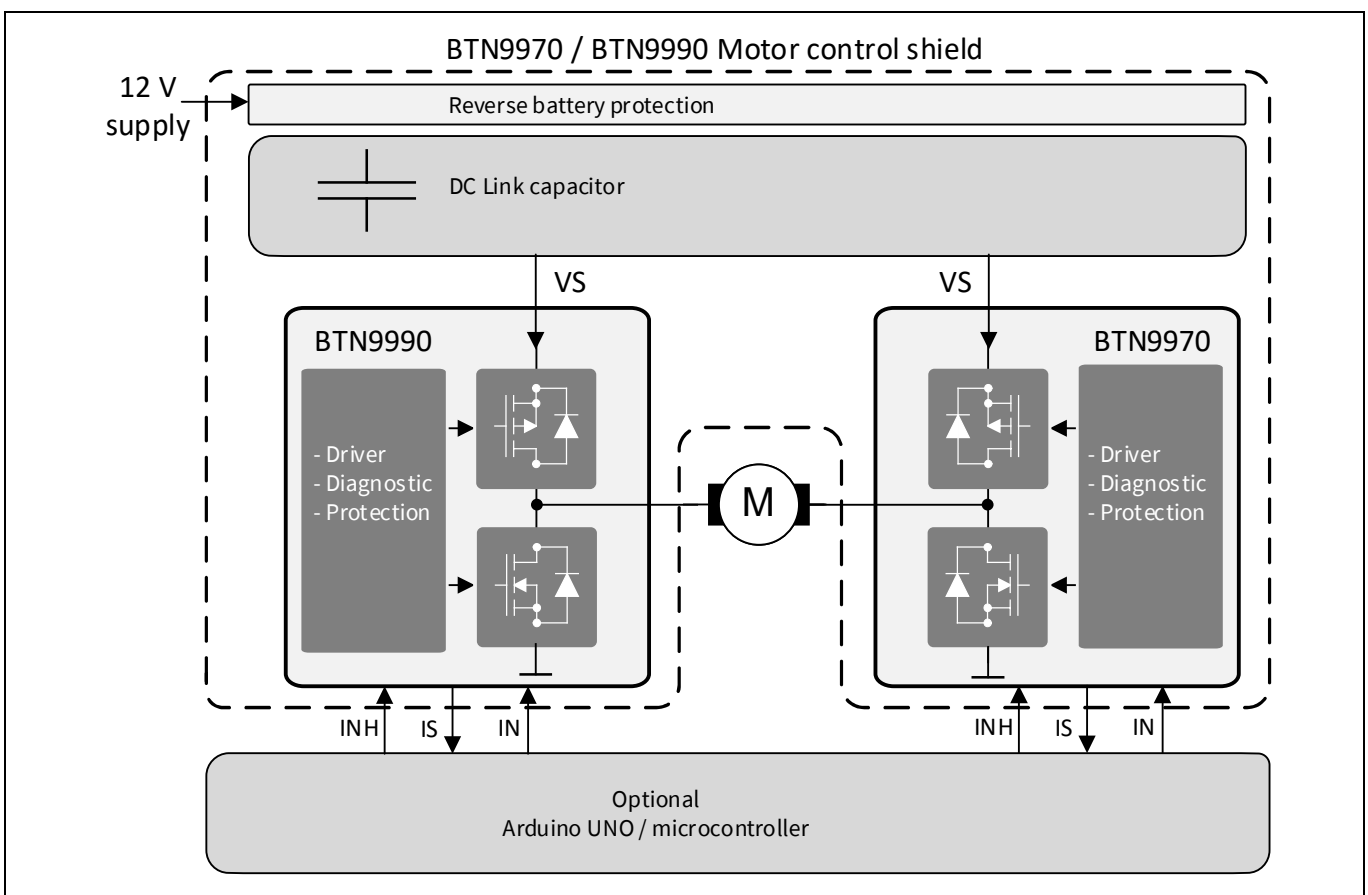

Figure 2 Block diagram

1.3 Main features

The board includes two NovalithIC+™ high current half bridges with integrated driver BTN9970LV and BTN9990LV.

The board features:

- Operating voltage: 8 V – 18V
- Average motor current up to ~ 10 A. Restricted by the value and size of DC-link capacitor and power dissipation of PCB (current limitation of BTN9970LV is min. 60A and for BTN9990 min. 75A)

BTN9970 / BTN9990 Motor control shield

Arduino shield for evaluation

Hardware description

- Two independent single half-bridges to operate two DC brushed motors unidirectional either in motor to GND or motor to V_s configuration
- Single H (full) bridge to operate a DC brush motor bidirectional. In his case, the motor needs to be connected between the outputs OUT1 and OUT2.
- A 16 pin connector to interface via a uIO-stick to a PC or Notebook with installed Infineon’s Toolbox software.
- Connectors to stack the BTN9970 / BTN9990 motor control shield directly on top of an Arduino UNO controller board.
- A demo software code for the Arduino UNO to operate a motor in H (full) bridge configuration can be downloaded from BTN9970 / BTN9990 web folder [Single Half-Bridge ICs](#) .
- PWM operation, controlled by Arduino UNO board
- Reverse polarity protection by IC0 (PMOS transistor)

2 Hardware description

2.1 Board overview and connectors

Figure 3 below describes the BTN9970 / BTN9990 motor control shield with its connectors.

Figure 3 Board Top view with connectors

2.2 BTN9970 / BTN9990 pin assignment, definition and functions

Figure 4 Pin assignment BTN9970LV / BTN9990LV top view

Table 1: Pin definitions and functions

Pin	Symbol	I/O	Function
1,2	GND	-	Ground 1)
3	IN	I	Input Defines whether high- or low-side switch is activated. An internal pull-down resistor is connected to this pin.
4	INH	I	Inhibit When set to low device goes in tristate. An internal pull-down resistor is connected to this pin.
5	IS	O	Current sense, temperature sense, slew rate level and diagnostics
6,7	VS	-	Supply 1)
8(EP)	OUT	O	Power output of the bridge

1) All terminal pins must be connected together on the PCB. All terminal pins are internally connected together. PCB traces have to be designed to withstand the maximum current which can flow

Bold type: pin needs power wiring

3.2 Layout

The board is a 4-layer design.

Material: FR4

Dimensions: 53 mm x 70 mm, 1.6mm thickness

Layer stack: 4 layers 70 / 35 / 35 / 70 μm
