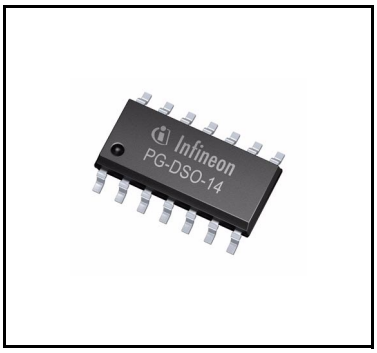
OPTIREG™ Linear TLE4262

5 V low drop voltage regulator



Features

- Output voltage tolerance ≤ ±2%
- 200 mA output current capability
- Low-drop voltage
- Very low standby current consumption
- Overtemperature protection
- Reverse polarity protection
- Short-circuit proof
- Adjustable reset threshold
- Wide temperature range
- Suitable for use in automotive electronics
- Green Product (RoHS compliant)

Potential applications

General automotive applications.

Product validation

Qualified for automotive applications. Product validation according to AEC-Q100/101.

Description

The OPTIREG™ Linear TLE4262 is a 5 V low drop voltage regulator in a PG-DSO-14 SMD package. The maximum input voltage is 45 V. The maximum output current is more than 200 mA. The IC is short-circuit proof and includes a temperature protection which turns off the IC at overtemperature.

The IC regulates an input voltage V_I in the range of 6 V < V_I < 45 V to $V_{Q,nom}$ = 5.0 V. A reset signal is generated for an output voltage of $V_{Q,rt}$ < 4.5 V. This voltage threshold can be decreased to 3.5 V by external connection of a voltage divider. The reset delay can be set externally with a capacitor. The IC can be switched off via the inhibit input, which reduces the current consumption from 900 µA to typical 0 µA.

Pin PG-DSO-14	Symbol	Function
1	RO	**Reset output;** open-collector output internally connected to the output via a resistor of 30 kΩ.
2, 8	N.C.	Not connected
3 - 5, 10 - 12	GND	**Ground**
6	D	**Reset delay;** connect capacitor to GND for setting delay time
7	RADJ	**Reset threshold;** for setting the switching threshold connect by a voltage divider from output to ground. If this input is connected to GND, reset is triggered at an output voltage of 4.5 V.
9	Q	**5 V output voltage;** block to ground by capacitor with $C \geq 22$ µF, ESR ≤ 3 Ω at 10 kHz.
13	I	**Input voltage;** block to ground directly at the IC by a ceramic capacitor.
14	INH	**Inhibit;** TTL-compatible, low-active input

4 Functional description

The control amplifier compares a reference voltage, which is kept highly accurate by resistance adjustment, to a voltage that is proportional to the output voltage and drives the base of the series transistor via a buffer. Saturation control as a function of the load current prevents any over-saturation of the power element. If the externally scaled down output voltage at the reset threshold input drops below 1.35 V, the external reset delay capacitor is discharged by the reset generator. If the voltage on the capacitor reaches the lower threshold V_{DRL}, a reset signal is issued on the reset output and not cancelled again until the upper threshold V_{DU} is exceeded. If the reset threshold input is connected to GND, reset is triggered at an output voltage of 4.5 V. The IC can be switched at the TTL-compatible, low-active inhibit input. It also includes a number of internal circuits for protection against:

- Overload
- Overtemperature
- Reverse polarity

4.1 Choosing external components

The input capacitor C_I is necessary for compensation of line influences. Using a resistor of approx. 1 Ω in series with C_I, the oscillating circuit consisting of input inductivity and input capacitance can be damped. The output capacitor is necessary for the stability of the regulating circuit. Stability is ensured at values $C_Q \geq 22$ µF and an ESR of ≤ 3 Ω within the operating temperature range. For small tolerances of the reset delay the spread of the capacitance of the delay capacitor and its temperature coefficient should be noted.

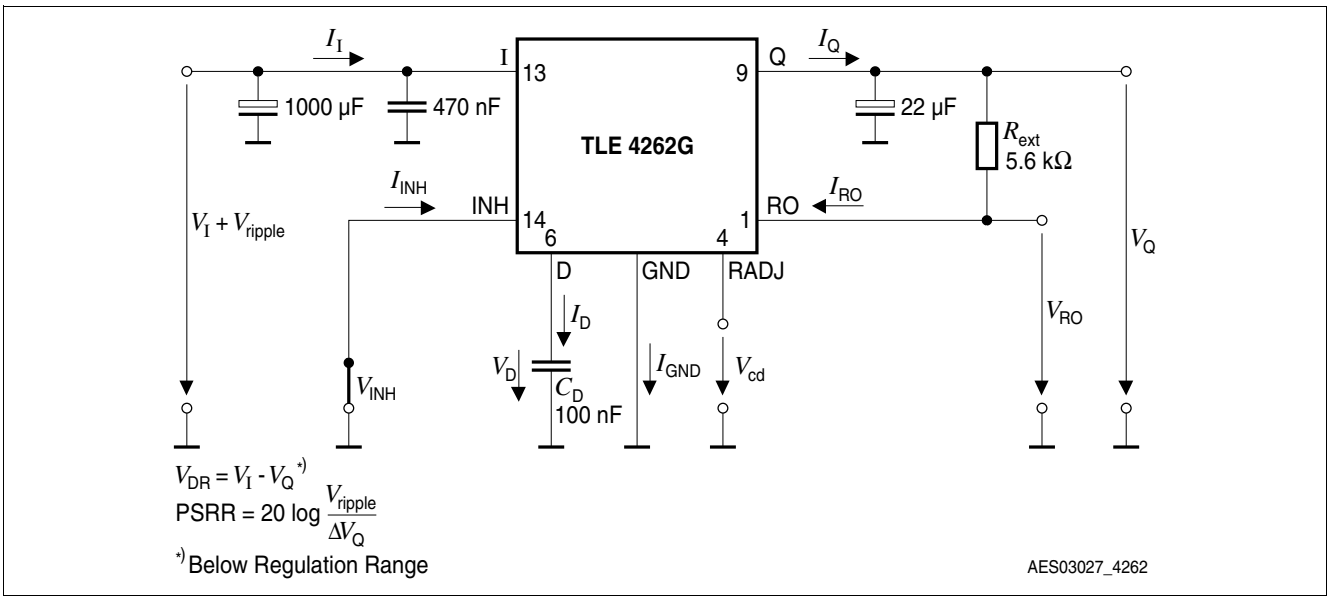

Figure 4 Test circuit

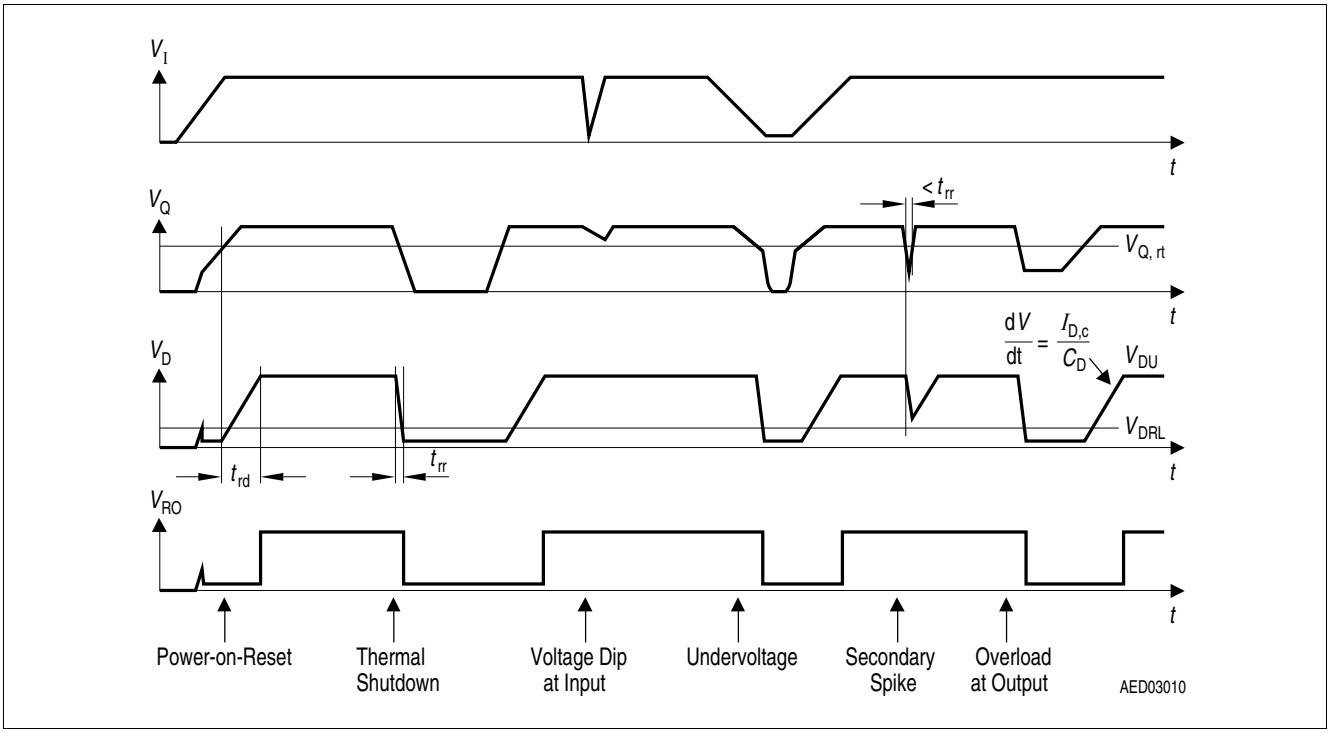

Figure 5 Time response

5.1 Reset timing

The power-on reset delay time is defined by the charging time of an external capacitor C_D which can be calculated as follows:

$$C_D = (\Delta t_{rd} \times I_{D,c}) / \Delta V \quad (5.1)$$

Definitions:

- C_D = delay capacitor
- Δt_{rd} = delay time
- $I_{D,c}$ = charge current, typical 10 µA
- $\Delta V = V_{DU}$, typical 1.8 V
- V_{DU} = upper delay switching threshold at C_D for reset delay time

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
