

# OPTIREG™ Linear TLE4276

## Low Drop Voltage Regulator

RoHS

### Features

- 5 V, and variable output voltage
- Output voltage tolerance  $\leq \pm 4\%$
- 400 mA current capability
- Low-drop voltage
- Inhibit input
- Very low current consumption
- Short-circuit-proof
- Reverse polarity proof
- Suitable for use in automotive electronics
- Green Product (RoHS compliant)

### Potential applications

Automotive applications especially with tight space constraints.

### Product validation

Qualified for Automotive Applications. Product Validation according to AEC-Q100/101.

### Description

The OPTIREG™ Linear TLE4276 is a low-drop voltage regulator in a TO package. The IC regulates an input voltage up to 40 V to  $V_{Q,nom} = 5.0$  V (V50), and adjustable voltage (V). The maximum output current is 400 mA. The IC can be switched off via the inhibit input, which causes the current consumption to drop below 10  $\mu$ A. The IC is short-circuit-proof and includes temperature protection which turns off the device at overtemperature.

## Functional Description

### 3 Functional Description

#### Functional Description

The OPTIREG™ Linear TLE4276 is a low-drop voltage regulator in a TO package. The IC regulates an input voltage up to 40 V to  $V_{Q,nom} = 5.0$  V (V50), and adjustable voltage (V). The maximum output current is 400 mA. The IC can be switched off via the inhibit input, which causes the current consumption to drop below 10  $\mu$ A. The IC is short-circuit-proof and includes temperature protection which turns off the device at overtemperature.

#### Dimensioning Information on External Components

The input capacitor  $C_i$  is necessary for compensation of line influences. Using a resistor of approx.  $1\Omega$  in series with  $C_i$ , the oscillating of input inductivity and input capacitance can be damped. The output capacitor  $C_Q$  is necessary for the stability of the regulation circuit. Stability is guaranteed at values  $C_Q \geq 22\ \mu$ F and an ESR of  $\leq 3\ \Omega$  within the operating temperature range.

#### Circuit Description

The control amplifier compares a reference voltage to a voltage that is proportional to the output voltage and drives the base of the series transistor via a buffer. Saturation control as a function of the load current prevents any oversaturation of the power element. The IC also incorporates a number of internal circuits for protection against:

- Overload
- Overtemperature
- Reverse polarity

## Functional Description

## Functional Description

### Application Information for Variable Output Regulator TLE 4276 V

The output voltage of the TLE 4276 V can be adjusted between 2.5 V and 20 V by an external output voltage divider, closing the control loop to the voltage adjust pin VA.

The voltage at pin VA is compared to the internal reference of typical 2.5 V in an error amplifier. It controls the output voltage.

**Figure 5 Application Detail External Components at Output for Variable Voltage Regulator**

The output voltage is calculated according to [Equation \(3.1\)](#):

$$V_Q = (R_1 + R_2) / R_2 \times V_{\text{ref}}, \text{ neglecting } I_{\text{VA}} \quad (3.1)$$

$V_{\text{ref}}$  is typically 2.5 V.

To avoid errors caused by leakage current  $I_{\text{VA}}$ , we recommend to choose the resistor value  $R_2$  according to [Equation \(3.2\)](#):

$$R_2 < 50 \text{ k}\Omega \quad (3.2)$$

For a 2.5 V output voltage the output pin Q is directly connected to the adjust pin VA.

The accuracy of the resistors  $R_1$  and  $R_2$  add an additional error to the output voltage tolerance.

The operation range of the variable TLE 4276 V is  $V_Q + 0.5 \text{ V}$  to 40 V. For internal biasing a minimum input voltage of 4.3 V is required. For output voltages below 4 V the voltage drop is  $4.3 \text{ V} - V_Q$ .

**Green Product (RoHS compliant)**

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).

The data contained in this document is exclusively intended for technically trained staff. It is the responsibility of customer's technical departments to evaluate the suitability of the product for the intended application and the completeness of the product information given in this document with respect to such application.

For further information on technology, delivery terms and conditions and prices, please contact the nearest Infineon Technologies Office ([www.infineon.com](http://www.infineon.com)).

## **WARNINGS**

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.

# X-ON Electronics

Largest Supplier of Electrical and Electronic Components
