Version 20.1

CONTENTS

INTEL FPGA SOLUTIONS PORTFOLIO

Intel delivers a broad portfolio of programmable logic devices—FPGAs, SoCs, and CPLDs—together with software tools, intellectual property (IP), embedded processors, customer support, and technical training. Intel's product leadership, excellent value, and superior quality of service give you a measurable advantage. Bring your great ideas to life faster, better, and more cost effectively.

FPGAs and CPLDs

Intel FPGAs and CPLDs give you the flexibility to innovate, differentiate, and stay ahead in the market. We have five classes of FPGAs to meet your market needs, from the industry's highest density and performance to the most cost effective.

Intel Agilex FPGAs

The Intel Agilex FPGA family, built on 10 nm technology, enables customized acceleration and connectivity for a wide range of compute and bandwidth intensive applications, while providing an improvement in performance and reduction in power.

Intel Stratix Series

The Intel Stratix FPGA and SoC family enables you to deliver high-performance, state-of-the-art products to market faster with lower risk and higher productivity.

Intel Arria Series

The Intel Arria device family delivers performance and power efficiency in the midrange.

Intel Cyclone Series

The Intel Cyclone FPGA series is built to meet your low-power, cost-sensitive design needs, enabling you to get to market faster.

Intel MAX Series

The Intel MAX 10 FPGAs revolutionize non-volatile integration by delivering advanced processing capabilities in a low-cost, single-chip small form.

Power Solutions

Power your systems with Intel Enpirion Power Solutions. Our integrated power management products provide a combination of small footprint, low-noise performance, and high efficiency. Intel Enpirion power system-on-chip (PowerSoC) products provide a qualified and reliable solution that enables you to complete your design faster.

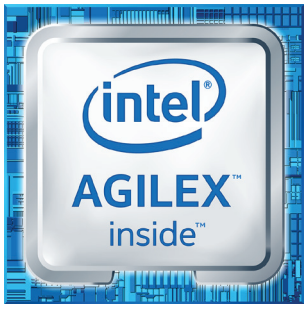
Acceleration Platforms and Solutions

Intel FPGA-based acceleration platforms enable a scalable volume deployment of various workloads in edge, network, cloud, enterprise, and other types of data center environment through Intel FPGA Programmable Acceleration Cards and development software, such as the Intel Acceleration Stack for Intel Xeon CPU with FPGAs and OpenVINO™ toolkit.

Productivity-Enhancing Design Software, Embedded Processing, IP, Development Kits, and Training

With Intel, you get a complete design environment and a wide choice of design tools—all built to work together so your designs are up and running fast. You can try one of our training classes to get a jump-start on your designs. Choose Intel and see how we enhance your productivity and make a difference to your bottom line.

INTEL AGILEX FPGA AND SOC OVERVIEW

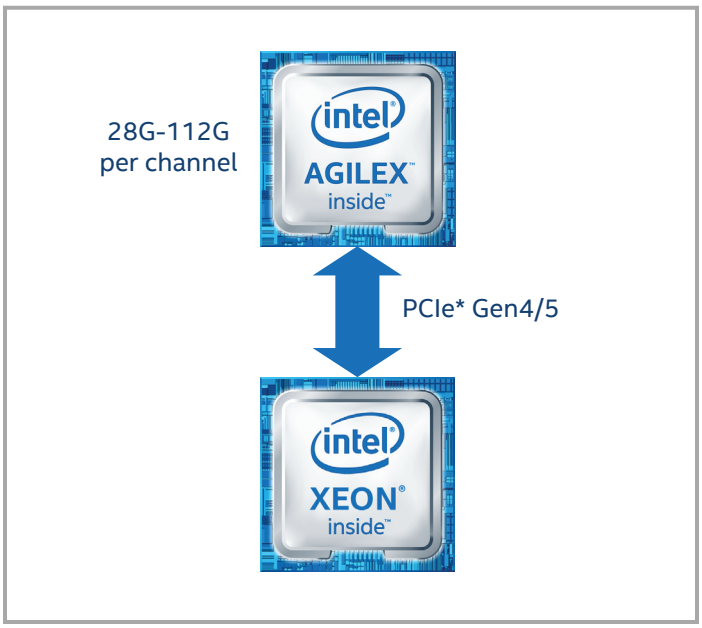


www.intel.com/agilex

The Intel Agilex FPGA family leverages heterogeneous 3D system-in-package (SiP) technology to integrate Intel's first FPGA fabric built on 10 nm process technology and second-generation Intel Hyperflex™ FPGA Architecture to deliver up to 40% higher performance[1] or up to 40% lower power[1] for data center, networking, and edge applications. Intel Agilex SoC FPGAs also integrate the quad-core Arm Cortex-A53 processor to provide high system integration.

INTEL AGILEX F-SERIES FPGAs AND SoCs	INTEL AGILEX I-SERIES SoC FPGAs	INTEL AGILEX M-SERIES SoC FPGAs
Intel Agilex F-Series FPGAs and SoC FPGAs bring together transceiver support up to 58 Gbps, increased digital signal processing (DSP) capabilities, high system integration, and second-generation Intel Hyperflex FPGA architecture for a wide range of data center, networking, and edge applications. The Intel Agilex F-Series FPGA and SoC family also provides the option to integrate the quad-core Arm Cortex-A53 processor to provide high system integration.	Intel Agilex I-Series SoC FPGAs are optimized for high-performance processor interface and bandwidth-intensive applications. Cache and memory coherent attached to Intel Xeon® processors with Compute Express Link (CXL), hardened PCI Express (PCIe) Gen5 support, and transceiver support up to 112 Gbps make the Intel Agilex I-Series SoC FPGAs a compelling choice for applications that demand massive interface bandwidth and high performance.	Intel Agilex M-Series SoC FPGAs are optimized for compute and memory intensive applications. With cache and memory coherent attach to Intel Xeon processors, high-bandwidth memory integration, hardened DDR5 controller, and Intel Optane™ DC persistent memory support, the Intel Agilex M-Series SoC FPGAs are optimized for data-intensive applications that need massive memory in addition to high bandwidth. Coming soon.

Efficient Network Transformation



Datapath Acceleration

VNF Performance Optimization

- Load balancing
- Data integrity
- Network translation

Significant Improvements

- Throughput
- Jitter
- Latency

Infrastructure Offload

Optimized Architecture

- vSwitch
- vRouter
- Security

Small Form Factor and Low Power

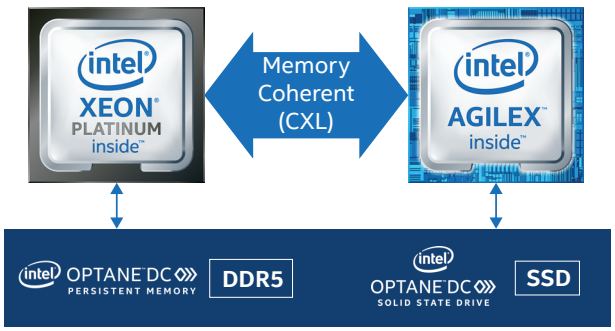
- Wide range of servers

Product and Performance Information:

[1] This comparison is based on the Intel Agilex FPGA and SoC family vs. Intel Stratix 10 FPGA family using simulation results and is subject to change. This document contains information on products, services and/or processes in development. All information provided here is subject to change without notice. Contact your Intel representative to obtain the latest forecast, schedule, specifications, and roadmaps.

Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Learn more at intel.com, or from the OEM or retailer. No computer system can be absolutely secure. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors.

Converged Workload Acceleration for the Data Center

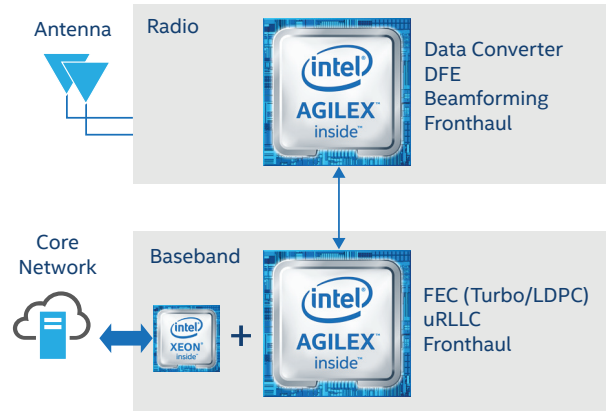


Infrastructure Acceleration
- Network
- Security
- Remote memory access

Application Acceleration
- Artificial intelligence (AI)
- Search
- Video transcode
- Database
- 40 TFLOPs of DSP performance[1]

Storage Acceleration
- Compression
- Decompression
- Encryption
- Memory hierarchy management

Agility and Flexibility for All Stages of 5G Implementation



Custom Logic Continuum

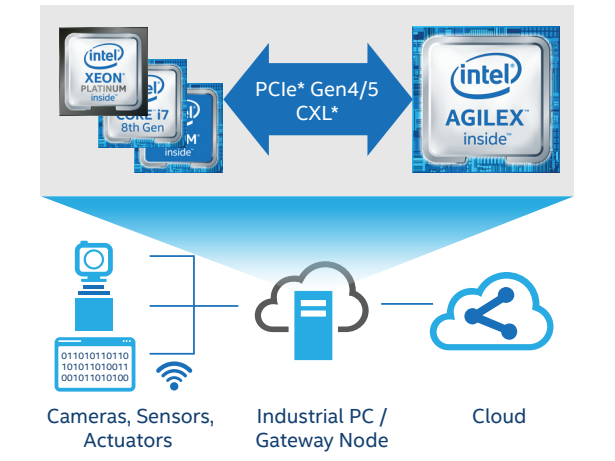
FPGA Flexibility
- High flexibility
- Short time to market

Rapid Intel eASIC™ Device Optimization
- Power and cost optimization

Full Custom ASIC Optimization
- Best power[1]
- Best performance[1]
- Best cost[1]

Application-Specific Tile Options
- Data converter
- Vector engine
- Custom compute

Smart, Safe, and Secure Factory Acceleration



Acceleration and Analytics
- In-line protocol acceleration
- Look-aside application acceleration

Safety and Security
- Secure boot
- Encryption
- Authentication

Customized Connectivity
- Time-sensitive networks
- Flexible I/O

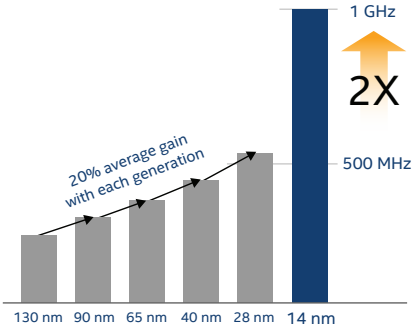
GENERATION 10 FPGAs AND SoCs

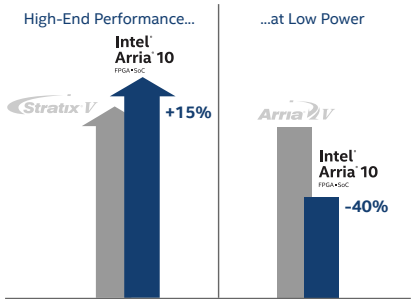
Intel's Generation 10 FPGAs and SoCs are optimized based on process technology and architecture to deliver the industry's highest performance and highest levels of system integration at the lowest power. Generation 10 device families include Intel Stratix 10 FPGAs and SoCs, Intel Arria 10 FPGAs and SoCs, Intel Cyclone 10 FPGAs, and Intel MAX 10 FPGAs.



Intel® Stratix® 10

FPGA ▪ SoC

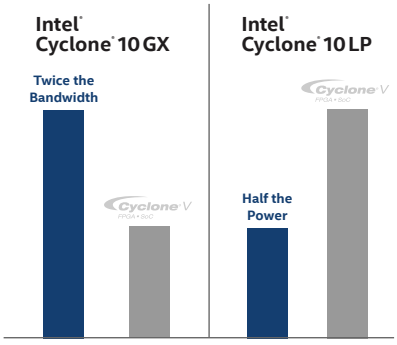
- 2X core performance with revolutionary Intel Hyperflex FPGA architecture†
- Up to 70% power savings†
- Highest density FPGA with up to 10.2 M logic elements (LEs)
- 64 bit quad-core Arm Cortex-A53 processor system
- Up to 10 tera floating point operations per second (TFLOPS) single-precision floating-point throughput
- Built on Intel's 14 nm Tri-Gate process technology



Intel® Arria® 10

FPGA ▪ SoC

- 15% higher performance than the previous high-end devices†
- 40% lower midrange power†
- 1.5 GHz dual-core Arm Cortex-A9 processor
- IP core support, including 100G Ethernet, 150G/300G Interlaken, and PCI Express Gen3
- Built on TSMC's 20 nm process technology



Intel® Cyclone® 10

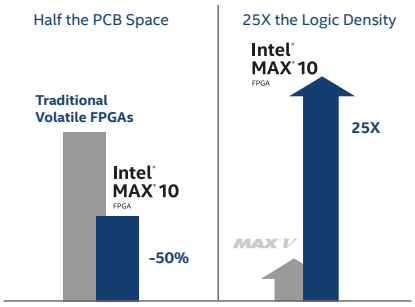
FPGA

Intel Cyclone 10 GX

- Optimized for high-bandwidth, high-performance applications
- The industry's first low-cost FPGA with 12.5 Gbps transceiver I/O support
- High-performance 1,866 Mbps external memory interface
- 1.434 Gbps LVDS I/Os
- The industry's first low-cost FPGA with IEEE 754 compliant hard floating-point DSP blocks

Intel Cyclone 10 LP

- Optimized for cost and power-sensitive applications
- Chip-to-chip bridging
- I/O expansion
- Control applications



Intel® MAX® 10

FPGA

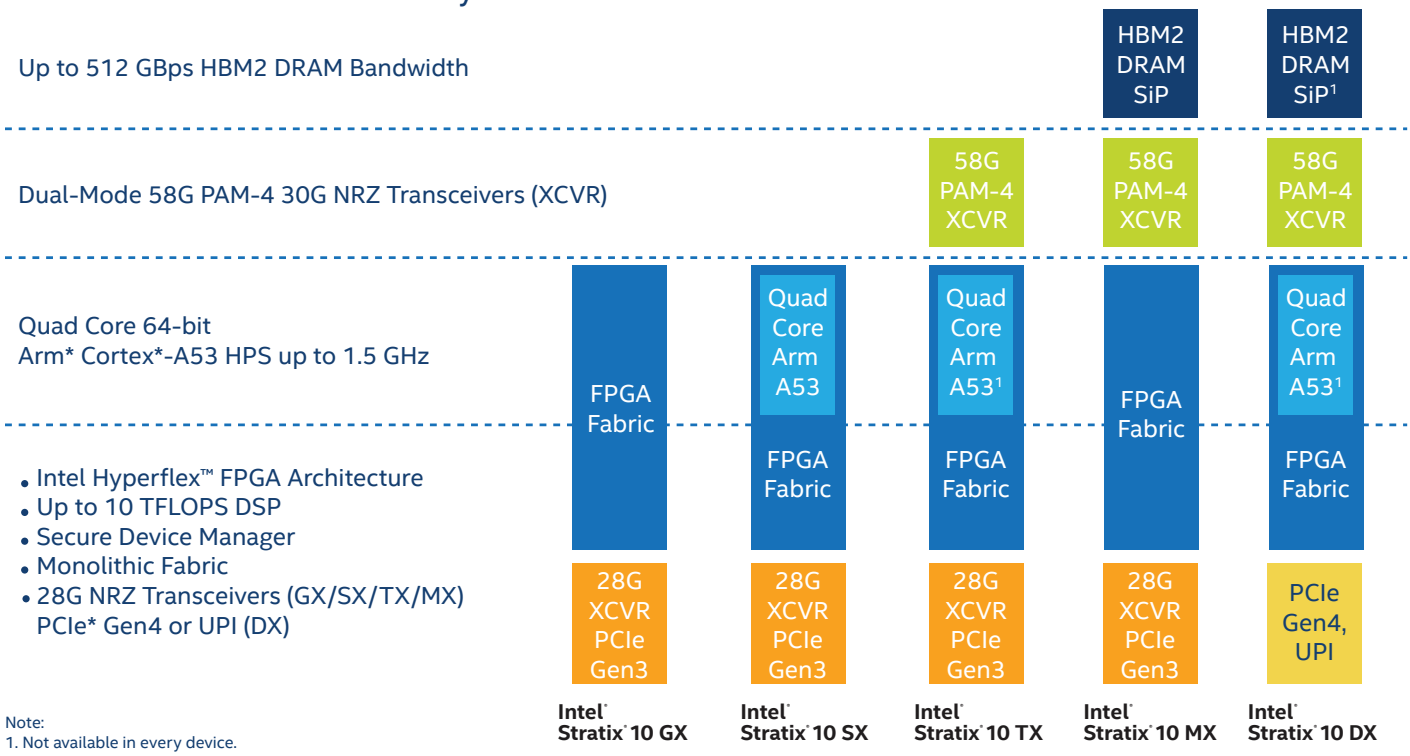
- Single-chip, dual-configuration non-volatile FPGA
- Optimal system component integration for half the PCB space of traditional volatile FPGAs
- Broad range of IP including analog-to-digital converters (ADCs), DSP, and the Nios II embedded soft processor

INTEL STRATIX 10 FPGA AND SoC OVERVIEW

www.intel.com/stratix10

Intel FPGAs and SoCs deliver breakthrough advantages in performance, power efficiency, density, and system integration that are unmatched in the industry. Featuring the revolutionary Intel Hyperflex FPGA architecture and built on the Intel 14 nm Tri-Gate process, Intel Stratix 10 devices deliver 2X core performance gains over previous-generation, high-performance FPGAs with up to 70% lower power†.

Intel® Stratix® 10 Device Family Variants



Note:
1. Not available in every device.

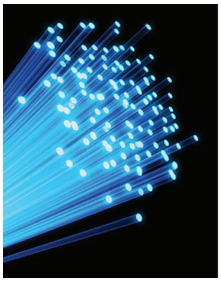
The figure above shows the core performance benchmarks achieved by early access customers using the Intel Stratix 10 Hyperflex FPGA architecture. With the 2X performance increase, customers in multiple end markets can achieve significant improvements in both throughput and area utilization, with up to 70% lower power†.

Intel Stratix 10 FPGA and SoC system integration breakthroughs include:

- Heterogeneous 3D system in package (SiP) integration
- The highest density FPGA fabric with up to 10.2 million LEs
- Up to 10 TFLOPS of IEEE 754 compliant single-precision floating-point DSP throughput
- Secure Device Manager (SDM) with the most comprehensive security capabilities
- Integrated quad-core 64 bit Arm Cortex-A53 hard processor system up to 1.5 GHz
- Complementary optimized and validated Intel Enpirion power solutions
- Dual-mode 28.9 Gbps non-return-to-zero (NRZ) and 57.8 Gbps PAM-4 transceivers
- HBM2 DRAM SiP delivering up to 512 GBps of memory bandwidth

These unprecedented capabilities make Intel Stratix 10 devices uniquely positioned to address the design challenges in next-generation, high-performance systems in virtually all end markets including wireline and wireless communications, computing, storage, military, broadcast, medical, and test and measurement.

Communications



- 400G/500G/1T optical transmission
- 200G/400G bridging and aggregation
- 982 MHz remote radio head
- Mobile backhaul
- 5G wireless communications

Computing and Storage

- Data center server acceleration
- High-performance computing (HPC)
- Oil and gas exploration
- Bioscience

Defense

- Next-generation radar
- Secure communications
- Avionics and guidance systems

Broadcast

- High-end broadcast studio
- High-end broadcast distribution
- Headend encoder or EdgeQAM or converged multiservice access platform (CMAP)

INTEL STRATIX 10 GX FPGA FEATURES

	PRODUCT LINE	GX 400	GX 650	GX 850	GX 1100
Resources	Logic elements (LEs)[1]	378,000	612,000	841,000	1,325,000
	Adaptive logic modules (ALMs)	128,160	207,360	284,960	449,280
	ALM registers	512,640	829,440	1,139,840	1,797,120
	Hyper-Registers from Intel Hyperflex FPGA architecture				Millions of Hype
	Programmable clock trees synthesizable				
	M20K memory blocks	1,537	2,489	3,477	5,461
	M20K memory size (Mb)	30	49	68	107
	MLAB memory size (Mb)	2	3	4	7
	Variable-precision digital signal processing (DSP) blocks	648	1,152	2,016	2,592
	18 x 19 multipliers	1,296	2,304	4,032	5,184
	Peak fixed-point performance (TMACS)[2]	2.6	4.6	8.1	10.4
	Peak floating-point performance (TFLOPS)[3]	1.0	1.8	3.2	4.1
I/O and Architectural Features	Secure device manager				AES-256/SHA-256 bitstream encryption/authentication, phy
	Hard processor system[4]				Quad-core 64-bit Arm Cortex-A53 up to 1.5 GHz with 32KB I/D cache, NEON coprocesso coherency unit, hard memory controllers, USB 2.0 x2, 1G EMAC x3, UA
	Maximum user I/O pins	374	392	688	688
	Maximum LVDS pairs 1.6 Gbps (RX or TX)	120	192	336	336
	Total full duplex transceiver count	24	24	48	48
	GXT full duplex transceiver count (up to 28.3 Gbps)	16	16	32	32
	GX full duplex transceiver count (up to 17.4 Gbps)	8	8	16	16
	PCI Express hard intellectual property (IP) blocks (Gen3 x16)	1	1	2	2
	Memory devices supported				DDR4, DD
Package Options and I/O Pins: General-Purpose I/O (GPIO) Count, High-Voltage I/O Count, LVDS Pairs, and Transceiver Count[7,8]					
	F1152 pin (35 mm x 35 mm, 1.0 mm pitch)	374,56,120,24	392,8,192,24	–	–
	F1760 pin (42.5 mm x 42.5 mm, 1.0 mm pitch)	–	–	688,16,336,48	688,16,336,48
	F2397 pin (50 mm x 50 mm, 1.0 mm pitch)	–	–	–	–
	F2912 pin (55 mm x 55 mm, 1.0 mm pitch)	–	–	–	–
	F4938 pin (70 mm x 74 mm, 1.0 mm pitch)				

Notes:
1. LE counts valid in comparing across Intel FPGA devices, and are conservative vs. competing FPGAs.
2. Fixed point performance assumes the use of pre-adder.
3. Floating point performance is IEEE-754 compliant single-precision.
4. Quad-core Arm Cortex-A53 hard processor system only available in Stratix 10 SX SoCs.
5. 1.4 Gbps LVDS maximum rate for GX 10M.
6. PCIe Gen3 x 8 support for GX 10M.
7. A subset of pins for each package are used for high-voltage 3.0 V and 2.5 V interfaces.
8. All data is preliminary and subject to change without prior notice.

392,8,192,24 Numbers indicate total GPIO count, high-voltage I/O count, LVDS pairs, and transceiver count.

Indicates pin migration path.

INTEL STRATIX 10 TX FEATURES

	PRODUCT LINE	TX 400	TX 850	TX 850	TX 1100	TX 1100	TX 1650

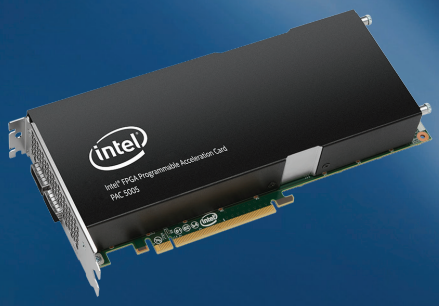
ACCELERATOR CARDS THAT FIT YOUR PERFORMANCE NEEDS

Intel® FPGA-based acceleration platforms enable a scalable volume deployment of various workloads in network, cloud, enterprise, and other types of data center environment through FPGA Programmable Acceleration Cards (Intel FPGA PAC) and development software, such as the Intel Acceleration Stack for Intel Xeon® CPU with FPGAs and OpenVINO™ toolkit. Intel platforms are qualified, validated, and deployed through various leading original equipment manufacturer (OEM) server providers.

Intel PAC with Intel Arria® 10 GX FPGA



Intel FPGA PAC D5005

Intel FPGA PAC N3000

Intel FPGA PACs support applications that benefit from Intel acceleration solutions:

- Network Function Virtualization
- Data Analytics
- Artificial Intelligence
- Financial
- Genomics
- Network Security and Monitoring
- Media Processing

For more information, please visit:
www.intel.com/fpgaaccelerationhub

INTEL ARRIA 10 FPGA AND SoC OVERVIEW

www.intel.com/arria10

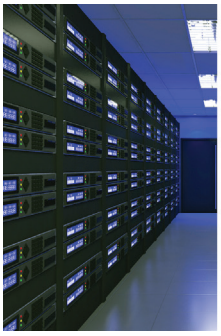
Intel Arria 10 FPGAs and SoCs deliver the highest performance at 20 nm, offering a one speed-grade performance advantage over competing devices. Intel Arria 10 FPGAs and SoCs are up to 40% lower power than previous generation FPGAs and SoCs, and feature the industry's only hard floating-point DSP blocks with speeds up to 1,500 giga floating-point operations per second (GFLOPS)†. The Intel Arria 10 FPGAs and SoCs are ideal for the following end market applications.

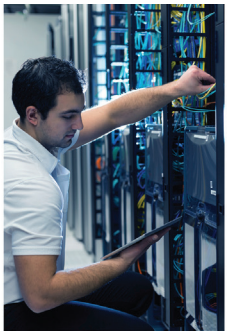
Wireless

Applications

- Remote radio head
- Mobile backhaul
- Active antenna
- Base station
- 4G/Long Term Evolution (LTE) macro eNB
- Wideband Code Division Multiple Access (W-CDMA)

Cloud Service and Storage

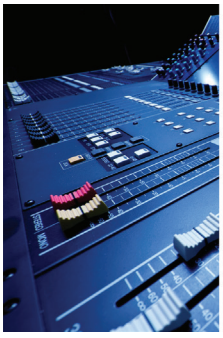


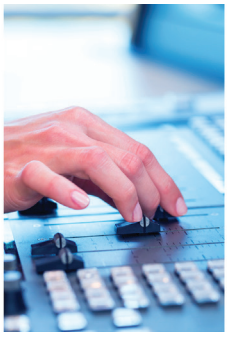


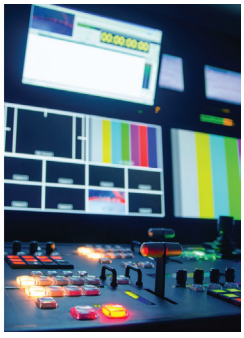
Applications

- Flash cache
- Cloud
- Server
- Financial
- Bioscience
- Oil and gas
- Data center server acceleration

Broadcast







Applications

- Switcher
- Server
- Encoder/decoder
- Capture cards
- Editing
- Monitors
- Multiviewers

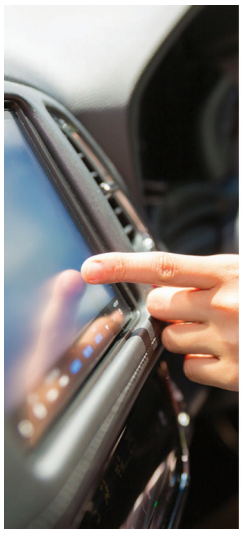
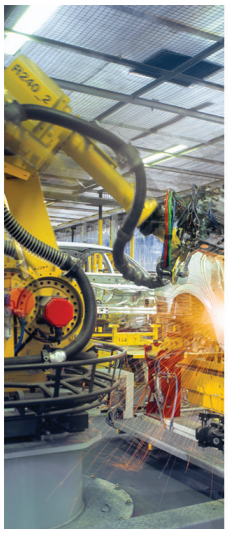
INTEL CYCLONE 10 FPGA OVERVIEW

www.intel.com/cyclone10

Intel Cyclone 10 FPGAs deliver cost and power savings over previous generations of Intel Cyclone FPGAs. Intel Cyclone 10 GX FPGAs provide high bandwidth via 12.5G transceiver-based functions, 1.4 Gbps LVDS, and 1,866 Mbps DDR3 SDRAM, and feature a hard floating-point DSP block in a low-cost FPGA. Intel Cyclone 10 LP devices offer low static power, cost-optimized functions.

- Intel Cyclone 10 GX FPGAs are optimized for high bandwidth‡
- Intel Cyclone 10 LP FPGAs are optimized for power and cost-sensitive applications



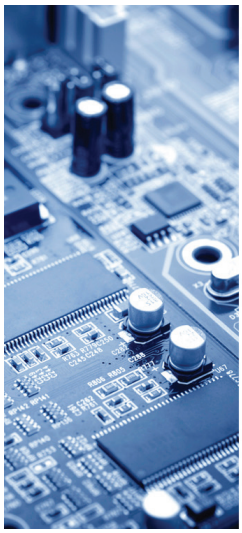


Intel Cyclone 10 GX FPGA

- Low-cost 12.5 Gbps transceivers
- 1,866 Mbps 72 bit DDR3 SDRAM interface
- 1.4 Gbps LVDS
- The industry's first low-cost FPGA with hard floating-point blocks

GX Applications

- Embedded vision cameras
- Industrial robotics
- Machine vision
- Programmable logic controllers
- Pro-AV systems



Intel Cyclone 10 LP FPGA

- Designed for power-sensitive applications
- Simplified core power supply requirements
- High I/O count to package density ratio
- Embedded Nios II soft processor support

LP Applications

- I/O expansion
- Interfacing
- Chip-to-chip bridging
- Sensor fusion
- Industrial motor control

‡ Compared to previous generation Cyclone FPGAs, cost comparisons are based on list price. Tests measure performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase. For more complete information about performance and benchmark results, visit www.intel.com/benchmarks.

	Maximum transceiver count (12.5 Gbps)	6	12	12	12
	Maximum 3V I/O pins	48	48	48	48
	PCI Express hard IP blocks (Gen2 x4)[4]	1	1	1	1
	Memory devices supported	DDR3, DDR3L, LPDDR3			
Package Options and I/O Pins: General-Purpose I/O (GPIO) Count, 3V I/O Count, LVDS Pairs, Total Transceiver count[5]					
	U484 pin (19 mm x 19 mm, 0.8 mm pitch)	188, 48, 70, 6	188, 48, 70, 6	188, 48, 70, 6	188, 48, 70, 6
	F672 pin (27 mm x 27 mm, 1.0 mm pitch)	192, 48, 72, 6	236, 48, 94, 10	236, 48, 94, 10	236, 48, 94, 10
	F780 pin (29 mm x 29 mm, 1.0 mm pitch)		284, 48, 118, 12	284, 48, 118, 12	284, 48, 118, 12

Notes:
1. LE counts valid in comparing across Intel devices, and are conservative versus competing FPGAs.
2. Fixed-point performance assumes the use of pre-adders.
3. Floating-point performance is IEEE-754 compliant single-precision.
4. Hard PCI Express IP core x2 in U484 package
5. Each LVDS pair can be configured as either a differential input or differential output.
6. A subset of pins for each package are used for high-voltage 3.0 V and 2.5 V interfaces.
7. All data is correct at the time of printing and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.

Numbers indicate GPIO count, 3V I/O count, LVDS pairs, total transceiver count.

Indicates pin migration path.

INTEL CYCLONE 10 LP FPGA FEATURES

PRODUCT LINE		10CL006	10CL010
Resources	Logic elements (LEs)[1]	6,000	10,000

E144 pin (22 mm x 22mm, 0.5 mm pitch)		88, 22	88, 22
F484 pin (23 mm x 23 mm, 1.0 mm pitch)			
F780 pin (29 mm x 29 mm, 1.0 mm pitch)			

Notes:
1. LE counts valid in comparing across Intel devices, and are conservative versus competing FPGAs.
2. This includes both dedicated and emulated LVDS pairs
3. All data is correct at the time of printing and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.

71, 22 Numbers indicate GPIO count, LVDS pairs.

Indicates pin migration path.

INTEL MAX 10 FPGA OVERVIEW

www.intel.com/max10

Intel MAX 10 FPGAs revolutionize non-volatile integration by delivering advanced processing capabilities in a low-cost, instant-on, small form factor, programmable logic device.

Intel MAX 10 FPGAs are built on TSMC's 55 nm flash technology, enabling instant-on configuration so you can quickly control the power-up or initialization of other components in the system. The devices also include full-featured FPGA capabilities, such as DSP, analog functionality, Nios II Gen2 embedded soft processor support, and memory controllers.

With a robust set of FPGA capabilities, Intel MAX 10 FPGAs are optimized for a wide range of high-volume, cost-sensitive applications, including:

Automotive

- Built on TSMC's 55 nm high-volume flash process tailored for the automotive industry's rigorous safety and quality requirements
- Integrated flash provides instant-on behavior for applications requiring fast boot times such as rear-view cameras in advanced driver assistance systems (ADAS) and infotainment displays
- FPGA-class signal processing acceleration for electric vehicle (EV) applications, such as motor control, battery management, and power conversion

Industrial

- Reduced footprint, increased design security and reliability, and lower system cost
- Accurate environmental condition sensing and efficient real-time controls for motor control, I/O modules, and Internet of Things (IoT) applications
- Single-chip support for multiple industrial Ethernet protocols and machine-to-machine (M2M) communication

Communications

- Analog functionality for sensing board environment allows integration of power-up sequencing and system-monitoring circuitry in a single device
- High I/O count and software-based system management using the Nios II soft processor enable board management integration in an advanced, reliable, single-chip system controller

Notes:
1. Additional user flash may be available, depending on configuration options.
2. The number of PLLs available is dependent on the package option.
3. Availability of the ADC or TSD varies by package type. Smaller pin-count packages do not have access to the ADC hard IP.
4. SRAM only.
5. SRAM, DDR3 SDRAM, DDR2 SDRAM, or LPDDR2.
6. "D" = Dual power supply (1.2 V/2.5 V), "S" = Single power supply (3.3 V or 3.0 V).
7. V81 package does not support analog feature set. 10M08 V81 F devices support dual image with RSU.
8. "Easy PCB" utilizes 0.8 mm PCB design rules.
9. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.

C, 27, 3/7 — Indicates feature set options, GPIO count, and LVDS transmitter or receiver count. Feature set options: C = Compact (single image), F = Flash (dual image with RSU), A = Analog (analog features block). Each has added premiums.

Indicates pin migration.

Notes:
1. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.
2. 1.15 V operation.
3. The PLL count includes general-purpose fractional PLLs and transceiver fractional PLLs.
4. For Arria V GZ devices, the I/O voltage of 3.3 V compliant, requires a 3.0 V power supply.
5. One pair of 10 Gbps transceiver channels can be configured as three 6 Gbps transceiver channels.
6. With 16 and 32 bit ECC support.
7. These memory interfaces are not available as Intel FPGA IP.
8. This memory interface is only available for Arria V GZ devices.

Package Options and I/O Pins: General-Purpose I/O (GPIO) Count, High-Voltage I/O Count, LVDS Pairs, and Transceiver Count

U484 pin (19 mm, 0.8 mm pitch)	66, 151 0	66, 151 0	66, 151 0	66, 151 0
U672 pin (23 mm, 0.8 mm pitch)	145, 181 0	145, 181 0	145, 181 0	145, 181 0
F896 pin (31 mm, 1.0 mm pitch			288, 181 0	288, 181 0

Notes:
1. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.
2. The PLL count includes general-purpose fractional PLLs and transceiver fractional PLLs.
3. Transceiver counts shown are for ≤ 5 Gbps. The 6 Gbps channel count support depends on package and channel usage. Refer to Cyclone V Device Handbook Volume 2: Transceivers for guidelines.
4. One PCI Express hard IP block in U672 package.
5. With 16 and 32 bit ECC support.

Notes:
1. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.
2. Typical equivalent macrocells.
3. Unused LEs can be converted to memory. The total number of available LE RAM bits depends on the memory mode, depth, and width configurations of the instantiated memory.
4. Optional IP core.
5. An external resistor must be used for 5.0 V tolerance.
6. For temperature grades of specific packages (commercial, industrial, or extended temperatures), refer to Intel's online selector guide.
7. Thin quad flat pack (TQFP).

CONFIGURATION DEVICES

View device ordering codes on page 52.

www.intel.com/fpgaconfiguration

The following information is an overview of our configuration devices. To determine the right configuration device for your FPGA, refer to the device datasheets and pin-out files available on the Documentation: Configuration Devices page.

Intel FPGA serial configuration devices store the configuration file for our SRAM-based FPGAs. We designed our serial configuration devices to minimize board space while providing a dedicated FPGA configuration solution. Serial configuration devices are recommended for new designs. For information on additional configuration devices supporting older products, refer to the device datasheets and pin-out files, available on the Documentation: Configuration Devices page.

EPCQ-A SERIAL CONFIGURATION DEVICES FOR 28 NM AND PRIOR FPGAs (3.0–3.3 V)

	SOIC	
	8 pin 4.9 x 6.0 (mm)	16 pin 10.3 x 10.3 (mm)
EPCQ4A	4	
EPCQ16A	16	
EPCQ32A	32	
EPCQ64A		64
EPCQ128A		128

Notes:

512 Number indicates memory size in megabits (Mb).

Vertical migration (same V_{cc}, GND, ISP, and input pins).

TRANSCEIVER TECHNOLOGY

www.intel.com/transceiverprotocols

Intel FPGAs with integrated transceivers offer a range of data rates to suit all applications from 600 Mbps to 30 Gbps non-return-to-zero (NRZ) and up to 58 Gbps PAM4 Gbps.

For a list of supported transceiver protocols, visit **www.intel.com/transceiverprotocols**.

To learn more about Intel transceivers, visit the **Transceivers** page.

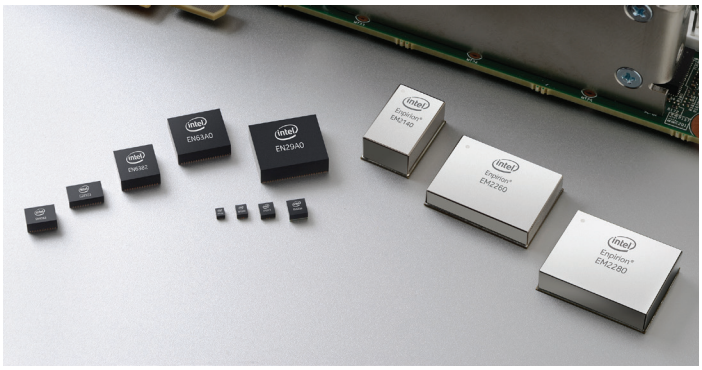
INTEL ENPIRION POWER SOLUTIONS

www.intel.com/enpirion

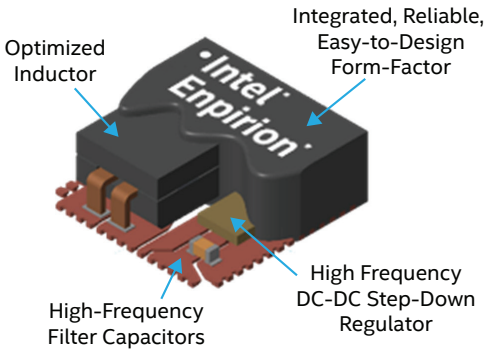
Intel® Enpirion®
Power Solutions

Intel Enpirion Power Solutions provide high-efficiency power management ideal for FPGAs, SoCs, and a wide range of devices. These robust, easy-to-use products meet your most stringent power requirements—all in a small footprint.

Intel Enpirion power system-on-chip (PowerSoC) products combine advanced technologies—such as high-frequency silicon design, digital communication and control, magnetics, and packaging—into a turnkey product. Unlike discrete power products, PowerSoCs give designers complete power systems that are fully simulated, characterized, and production qualified.



Powering Your Innovation with Intel Enpirion Power Solutions



Key Intellectual Property

- High-frequency power conversion
- Innovative magnetics engineering
- Advanced power packaging and construction
- Digital communication and control
- Complete and validated DC-DC step-down converter system design

Meeting Your Toughest Power Challenges

- Maximize performance
- Reduce system power consumption
- Increase power density
- Accelerate time to revenue

INTEL ENPIRION POWERSoC SOLUTIONS

Maximize Power Density and Performance with Intel Enpirion PowerSoC DC-DC Step-Down Converters

Intel Enpirion PowerSoC Solutions integrate all the key elements of a DC-DC step-down converter in one easy-to-use package that provides:

High Power Density and Small Footprint

Greatly reduce the amount of PCB space required for your power supply while achieving up to 56 W/cm^2.

High Efficiency and Thermal Performance

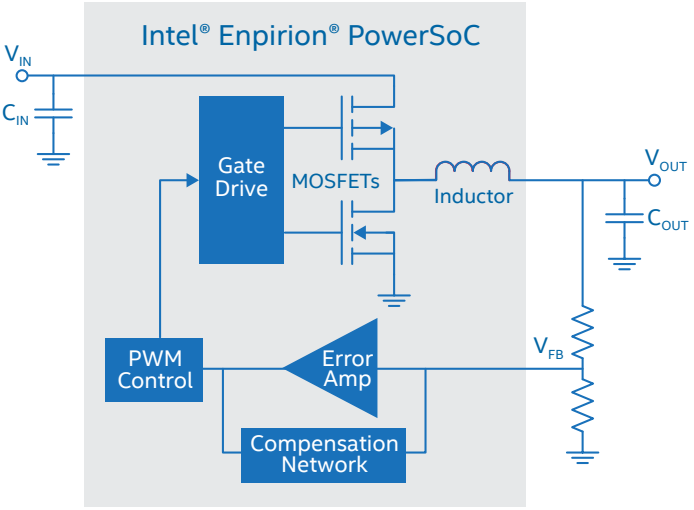
Optimized with up to 96 percent efficiency with industrial-grade and automotive-grade options available.†

Low Component Count and Higher Reliability

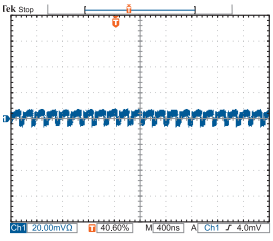
Designed and manufacturing-tested as a complete power system to deliver longer mean time between failures (MTBF) reliability.

Ease of Design and Fast Time to Market

Fully validated, turnkey designs that require over 40 percent less design time than discrete power solutions†.

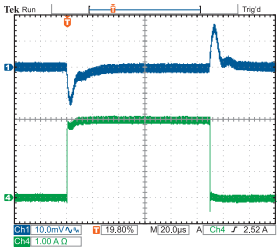


Excellent AC+DC Noise Performance



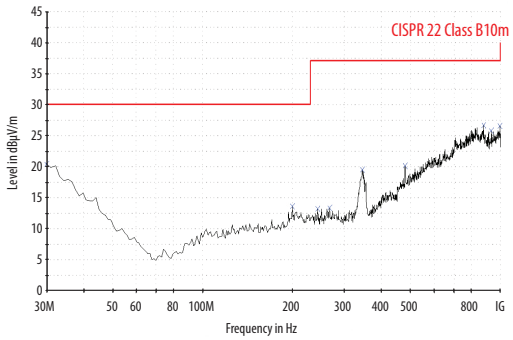
<10 mV$_{P-P}$ ripple and ≤2% accuracy for most devices†, 5 V input, 3.3 V output, 500 MHz bandwidth

Fast Transient Response

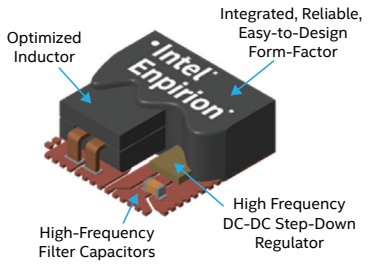


Reduce large, expensive bulk capacitance, <16 mV deviation, 5 V input, 3.3 V output†

Excellent EMI Performance



Designed and Validated as a Complete Power



Highly integrated and achieves >80,000 year mean time between failures (MTBF) reliability†

Notes:

1. Size estimate for example single-sided PCB including all suggested external components. Smaller size may be possible with double-sided PCB design.
2. Maximum $V_{OUT} = V_{IN} - V_{DROPOUT}$, where $V_{DROPOUT} = R_{DROPOUT}$ x Load Current. Reference device datasheet to calculate $V_{DROPOUT}$.
3. Only "7" version features Light Load Mode. Only "8" version available in automotive grade.
4. Only "5" version features V_{OUT} set by VID.
5. Based on good thermal design practices. May require airflow.

INTEL FPGA PROGRAMMABLE ACCELERATION OVERVIEW

Traditionally, FPGAs require deep domain expertise to program but the combination of Intel FPGA Programmable Acceleration Cards (Intel FPGA PACs) and the Intel Acceleration Stack for Intel Xeon CPU with FPGAs simplifies the development flow and enables rapid deployment across data centers to accelerate critical computational workloads. Intel is also partnering with FPGA IP developers, server original equipment manufacturers (OEMs), virtualization platform providers, operating system (OS) vendors, and system integrators to enable customers to efficiently develop and operationalize their infrastructure.

Intel FPGA Programmable Acceleration Card

Intel FPGA PACs are PCIe-based cards that are supported by the Intel Acceleration Stack for Intel Xeon CPU with FPGAs. Intel PACs are validated, qualified, and deployed through several leading OEM server providers.

Intel Programmable Acceleration Card with Intel Arria 10 GX FPGA provides both inline and lookaside acceleration. Its performance, low power, and small form factor allow you to implement solutions in many market segments, such as big data analytics, artificial intelligence, genomics, video transcoding, cybersecurity, and financial trading.

Intel FPGA Programmable Acceleration Card D5005 offers inline high-speed interfaces up to 100 Gbps. It allows you to deploy solutions for data center workloads, such as financial technology (FinTech), artificial intelligence, streaming analytics, video transcoding, and genomics.

Intel FPGA Programmable Acceleration Card N3000 accelerates network traffic for up to 100 Gbps to support low-latency, high-bandwidth 5G applications. It allows you to create custom-tailored solutions for vRAN and core network workloads and achieve faster time to market with the support of industry standard orchestration and open source tools.

Intel Acceleration Stack for Intel Xeon CPU with FPGAs

The Intel Acceleration Stack for Intel Xeon CPU with FPGAs is a robust collection of software, firmware, and tools designed and distributed by Intel to make it easier to develop and deploy Intel FPGAs for workload optimization in the data center. It provides multiple benefits to design engineers, such as saving time, enabling code-reuse, and enabling the first common developer interface. With optimized and simplified hardware interfaces and software application programming interfaces (APIs), the stack saves developer time so that they can focus on the unique value-add of their solution.

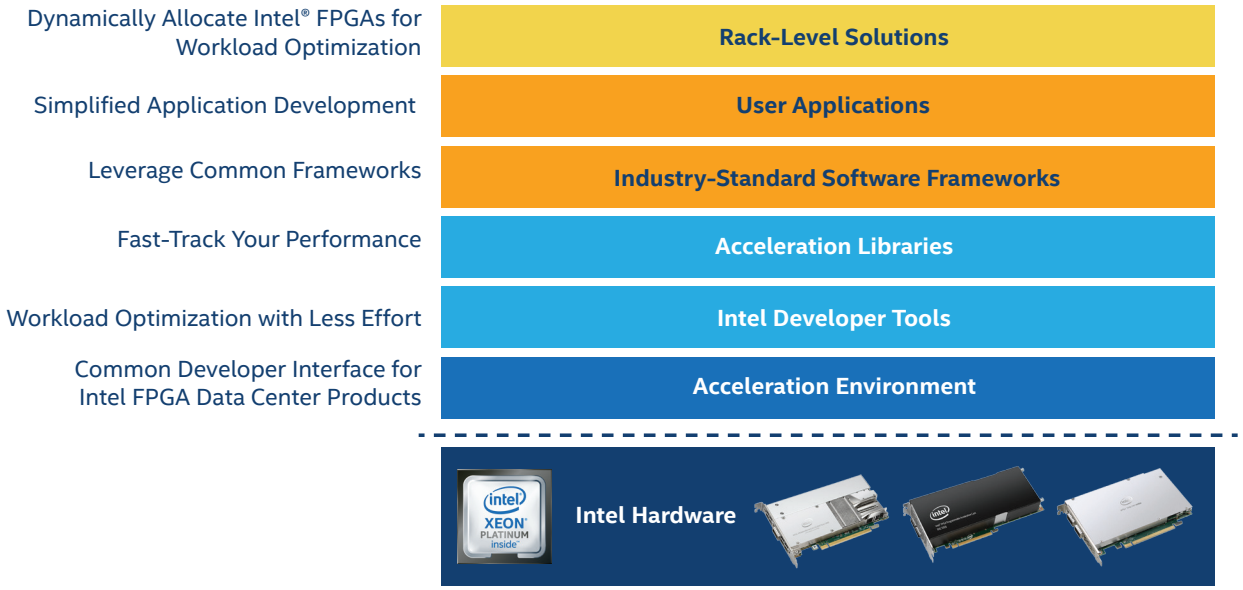
Accelerated Workload Solutions with Intel Partners

Intel enables partners to build pre-designed accelerator functions that integrate seamlessly into common libraries, software frameworks, and your custom software application to minimize development investment and accelerate time to market. All you need to do is select a platform, identify a workload you want to accelerate, and let our partners take the effort out of your design. We work with partners that develop workloads in big data analytics, media transcoding, financial technology, genomics, AI, security, and many others.

INTEL ACCELERATION STACK FOR INTEL XEON CPU WITH FPGAS

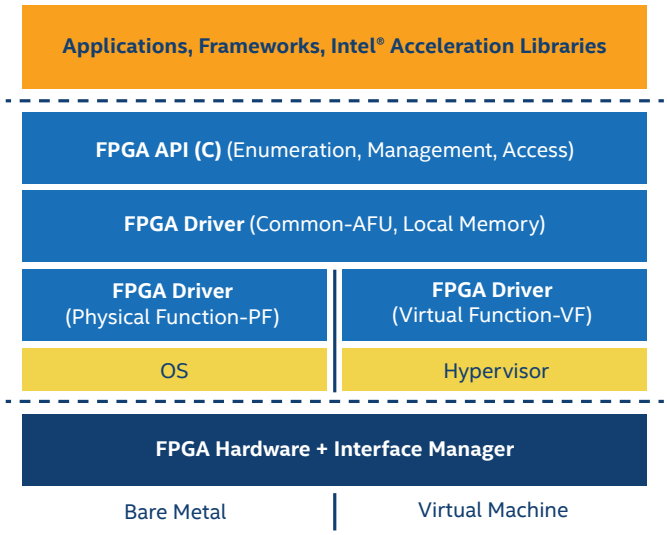
The Intel Acceleration Stack for Intel Xeon CPU with FPGAs provides optimized and simplified hardware interfaces and software APIs, saving developers time so they can focus on the unique value-add of their solution. It provides multiple benefits to design engineers:

- Establishes the world's first common developer interface for Intel FPGA data center products
- Enables code reuse across multiple Intel FPGA form-factor products
- Offers optimized and simplified hardware and software APIs provided by Intel
- Growing adoption by Intel partner ecosystem, further broadening appeal and simplifying use



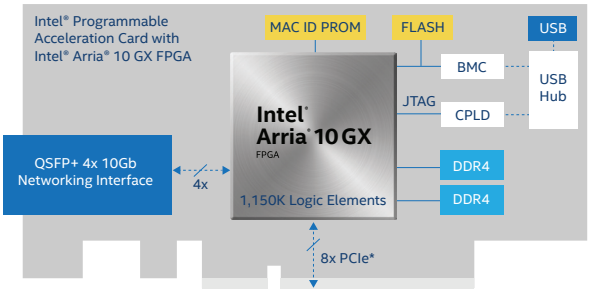
Open Programmable Acceleration Engine Technology

Open Programmable Acceleration Engine (OPAE) technology is a software programming layer that provides a consistent API across FPGA product generations and platforms. OPAE enables software developers to use popular Linux distributions and Intel SDKs and tools in virtual machine and bare-metal host platforms without the need to learn the intricacies of FPGA design. To foster an open ecosystem and encourage the use of FPGA acceleration for data center workloads, Intel has open sourced the technology for the industry and developer community.



INTEL PROGRAMMABLE ACCELERATION CARD WITH INTEL ARRIA 10 GX FPGA

This PCIe-based FPGA acceleration card for data centers offers both inline and lookaside acceleration. It provides the performance and versatility of FPGA acceleration and is one of several platforms supported by the Acceleration Stack for Intel Xeon CPUs with FPGAs. This acceleration stack provides a common developer interface for both application and accelerator function developers, and includes drivers, APIs, and an FPGA interface manager. Together with acceleration libraries and development tools, the acceleration stack saves developer time and enables code re-use across multiple Intel FPGA platforms. The card can be deployed in a variety of servers with its small form factor, low-power dissipation, and passive heat sink.



Targeted Workloads

- Big data analytics
- Artificial intelligence
- Media transcoding
- Cyber security
- High-performance computing (HPC), such as genomics and oil and gas
- Financial technology (FinTech)

Hardware

Intel Arria 10 GX FPGA
- High-performance, multi-gigabit serializer/deserializer (SERDES) transceivers up to 15 Gbps
- 1,150K logic elements available
- 65.7 Mb of on-chip memory
- 3,036 DSP blocks

On-Board Memory
- 8 GB DDR4 memory (4 GB x 2 banks)
- 1 Gb (128 MB) flash

Interfaces
- PCIe x8 Gen3 electrical, x16 mechanical
- USB 2.0 interface for debug and programming of FPGA and flash memory
- 1X QSFP+ with 4X 10GbE or 40GbE support

Form Factor
- ½ length, standard height; single slot with half height option
- 66 W thermal design power (TDP)

Board Management
- Temperature and voltage readout
- Platform Level Data Model (PLDM)

Software

- Acceleration Stack for Intel Xeon CPU with FPGAs
- FPGA Interface Manager installed
- OPAE

Design Entry Tools

- Intel Quartus Prime Pro Edition software
- Acceleration Stack for Intel Xeon CPU with FPGAs
- Intel FPGA SDK for OpenCL

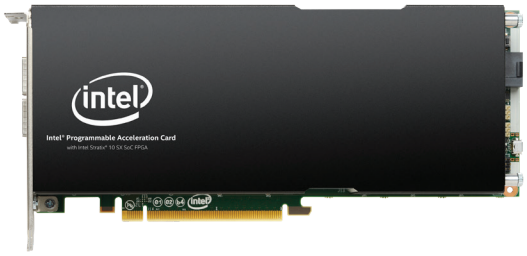
Ordering Information

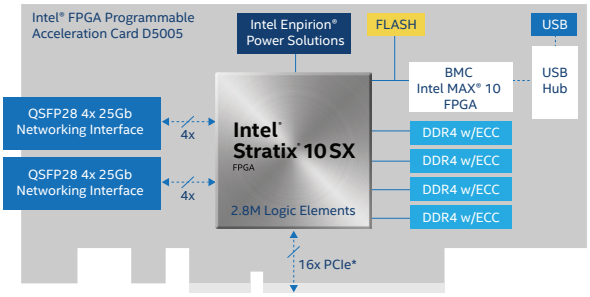
Development sample
- Buy from Intel's Buy Online (**https://buyfpga.intel.com**), Digi-Key (**www.digikey.com**), or Mouser (**www.mouser.com**) with an ordering code of DK-ACB-10AX1152AES
- Contact authorized server OEMs at **www.intel.com/fpgaaccelerationhub**
- Contact an Intel sales representative.

Volume Deployment
- Contact the authorized server OEMs listed in the URL above or an Intel sales representative.

INTEL FPGA PROGRAMMABLE ACCELERATION CARD D5005

This high-performance FPGA acceleration card for data centers offers both inline and lookaside acceleration. Expanding upon the Intel PAC portfolio, it offers inline high-speed interfaces up to 100 Gbps. The Intel FPGA PAC D5005 additional processing capability makes it ideal for FinTech and streaming analytics applications. It provides the performance and versatility of FPGA acceleration and is one of several platforms supported by the Acceleration Stack for Intel Xeon CPU with FPGAs. This acceleration stack provides a common developer interface for both application and accelerator function developers, and includes drivers, APIs, and an FPGA interface manager. Together with acceleration libraries and development tools, the acceleration stack saves developer time and enables code re-use across multiple Intel FPGA platforms.





Targeted Workloads

- FinTech
- Artificial intelligence
- Streaming analytics
- Video transcoding
- Genomics

Hardware

Intel Stratix 10 SX FPGA
- High-performance, multigigabit SERDES transceivers up to 26.3 Gbps
- 2,800K logic elements and 244 Mb on-chip memory
- 11,520 DSP blocks

Onboard Memory
- 32 GB DDR4 memory with error correction code
- 2 GB QSPI flash memory

Interfaces
- PCIe Gen3 x16
- USB 2.0 interface for debug and programming of FPGA and flash memory
- 2X QSFP+ with up to 100 Gbps support

Form Factor
- 3/4 length, full height; dual slot
- 215 W TDP

Board Management
- Intel MAX 10 FPGA Baseboard Management Controller (BMC)
  - Temperature and voltage readout
  - PLDM
  - Intelligent Platform Management Interface (IPMI 2.0)
- Remote Update capabilities for FPGA flash memory and BMC

Power Management
- Intel Enpirion Power Solutions: Intelligent system power management with real-time telemetry and system health monitoring.

Software

- Acceleration Stack for Intel Xeon CPU with FPGAs
- FPGA Interface Manager
- OPAE

Design Entry Tools

- Intel Quartus Prime Pro Edition software
- Intel FPGA SDK for OpenCL

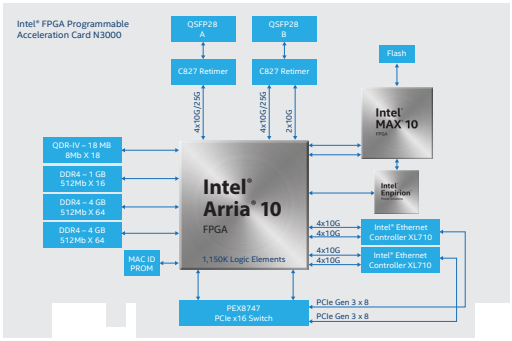
INTEL FPGA PROGRAMMABLE ACCELERATION CARD N3000

Intel FPGA Programmable Acceleration Card (Intel FPGA PAC) N3000 is a highly customizable platform, which enables high-throughput, lower latency, and high-bandwidth applications. It allows the optimization of data plane performance to achieve lower costs while maintaining a high degree of flexibility. End-to-end industry-standard and open-source tool support allow you to quickly adapt to evolving workloads and industry standards. Intel is accelerating 5G and network functions virtualization (NFV) adoption for ecosystem partners, such as telecommunications equipment manufacturers (TEMs), virtual network functions (VNF) vendors, system integrators, and telecommunications companies to bring scalable and high-performance solutions to market.



Targeted Workloads

- Virtual Broadband Networking Gateway (vBNG): H-QoS, Classification, Policing, Scheduling, and Shaping
- Virtualized Evolved Packet Core (vEPC), 5G Next-Generation Core Network (NGCN)
- Internet Protocol Security (IPSec)
- Segment routing for IPv6 (SRv6) vector packet processing (VPP)
- Virtual radio access network (vRAN)

Hardware

Intel Arria 10 GT FPGA

- High-performance, multi-gigabit SERDES transceivers up to 25.78 Gbps
- 1,150K logic elements
- 65.7 Mb on-chip memory
- 3,036 DSP blocks

Onboard Memory

- 9 GB DDR4
- 144 Mb QDR-IV

Interfaces

- PCIe Gen3 x16
- Dual Intel Ethernet Converged Network Adapter (Intel Ethernet CNA) XL710
- 2X QSFP with 10 Gbps and 25 Gbps support (up to 100GbE configuration)

Form Factor

- 1/2 length, full height; single slot

Board Management

- Intel MAX 10 FPGA BMC
  - Temperature and voltage readout
  - PLDM
- Remote update capabilities for FPGA flash memory and BMC

Power Management

- Intel Enpirion Power Solutions: Intelligent system power management with real-time telemetry and system health monitoring.

Software

- Data Plane Development Kit (DPDK)
- OPAE
- Acceleration Stack for Intel Xeon CPU with FPGAs
- FPGA Interface Manager

Design Entry Tools

- Intel Quartus Prime Pro Edition software
- Intel FPGA SDK for OpenCL

ACCELERATED WORKLOAD SOLUTIONS

Intel has engaged with leading providers of accelerator functions best suited for FPGA acceleration to provide complete solutions on Intel PACs. These solutions harness the performance and versatility of FPGA acceleration and leverage the Acceleration Stack for Intel Xeon CPU with FPGAs. This acceleration stack provides a common developer interface for both application and accelerator function developers. Together with acceleration libraries and development tools, the acceleration stack saves developers time and enables code re-use across multiple Intel FPGA platforms.

Our partners specialize in the workloads you care most about, such as data analytics, media processing, financial and genomics, to provide you with complete solutions and design services that minimize your development investment and accelerate your time to market.

INTEL QUARTUS PRIME DESIGN SOFTWARE

www.intel.com/quartus

The Intel Quartus Prime software is revolutionary in performance and productivity for FPGA, CPLD, and SoC designs, providing a fast path to convert your concept into reality. The Intel Quartus Prime software also supports many third-party tools for synthesis, static timing analysis, board-level simulation, signal integrity analysis, and formal verification.

Notes:
1. The software license for Intel Agilex FPGA support is available on request only.
2. The only Arria II FPGA supported is the EP2AGX45 device.
3. The Intel Cyclone 10 GX device support is available for free in the Pro Edition software.
4. Available for Cyclone V and Stratix V devices only and requires a partial reconfiguration license.
5. Available for Stratix V, Arria V, and Cyclone V devices.
6. For language support, refer to the **Verilog and SystemVerilog Synthesis Support** section of the Intel Quartus Prime Standard Edition User Guide.
7. Requires an additional license.

ADDITIONAL DEVELOPMENT TOOLS

TOOLS	DESCRIPTION
Intel FPGA SDK for OpenCL	• No additional licenses are required. • Supported with the Intel Quartus Prime Pro/Standard Edition software. • The software installation file includes the Intel Quartus Prime Pro/Standard Edition software and the OpenCL software.
Intel HLS Compiler	• No additional license required. • Now available as a separate download. • Supported with all editions of the Intel Quartus Prime software.
DSP Builder for Intel FPGAs	• Additional licenses are required. • DSP Builder for Intel FPGAs (Advanced Blockset only) is supported with the Intel Quartus Prime Pro Edition software for Intel Agilex, Intel Stratix 10, Intel Arria 10, and Intel Cyclone 10 GX devices. • DSP Builder for Intel FPGAs (Standard Blockset and Advanced Blockset) is supported with the Intel Quartus Prime Standard Edition software for Intel Arria 10, Intel Cyclone 10 LP, Intel MAX 10, Stratix V, Arria V, and Cyclone V devices.
Nios II Embedded Design Suite	• No additional licenses are required. • Supported with all editions of the Intel Quartus Prime software. • Includes Nios II software development tools and libraries.
Intel SoC FPGA Embedded Development Suite (SoC EDS)	• Requires additional licenses for Arm Development Studio (DS) Intel SoC FPGA Edition. • The SoC EDS Standard Edition is supported with the Intel Quartus Prime Lite/Standard Edition software and the SoC EDS Pro Edition is supported with the Intel Quartus Prime Pro Edition software.

INTEL QUARTUS PRIME DESIGN SOFTWARE FEATURES SUMMARY

Interface Planner	Enables you to quickly create your I/O design using real time legality checks.
Pin planner	Eases the process of assigning and managing pin assignments for high-density and high-pin-count designs.
Platform Designer	Accelerates system development by integrating IP functions and subsystems (collection of IP functions) using a hierarchical approach and a high-performance interconnect based on a network-on-a-chip architecture.
Off-the-shelf IP cores	Lets you construct your system-level design using IP cores from Intel and from Intel's third-party IP partners.
Synthesis	Provides expanded language support for System Verilog and VHDL 2008.
Scripting support	Supports command-line operation and Tcl scripting.
Rapid recompile	Maximizes your productivity by reducing your compilation time for small changes after a full compile. Improves design timing preservation.
Incremental optimization	Offers a faster methodology to converge to design sign-off. The traditional fitter stage is divided into finer stages for more control over the design flow.
Partial reconfiguration	Creates a physical region on the FPGA that can be reconfigured to execute different functions. Synthesize, place, route, close timing, and generate configuration bitstreams for the functions implemented in the region.
Block-based design flows	Provides flexibility of reusing timing-closed modules or design blocks across projects and teams.
Intel Hyperflex FPGA Architecture	Provides increased core performance and power efficiency for Intel Stratix 10 devices.
Physical synthesis	Uses post placement and routing delay knowledge of a design to improve performance.
Design space explorer (DSE)	Increases performance by automatically iterating through combinations of Intel Quartus Prime software settings to find optimal results.
Extensive cross-probing	Provides support for cross-probing between verification tools and design source files.
Optimization advisors	Provides design-specific advice to improve performance, resource usage, and power consumption.
Chip planner	Reduces verification time while maintaining timing closure by enabling small, post-placement and routing design changes to be implemented in minutes.
Timing Analyzer	Provides native Synopsys Design Constraint (SDC) support and allows you to create, manage, and analyze complex timing constraints and quickly perform advanced timing verification.
Signal Tap logic analyzer	Supports the most channels, fastest clock speeds, largest sample depths, and most advanced triggering capabilities available in an embedded logic analyzer.
System Console	Enables you to easily debug your FPGA in real time using read and write transactions. It also enables you to quickly create a GUI to help monitor and send data into your FPGA.
Power Analyzer	Enables you to analyze and optimize both dynamic and static power consumption accurately.
Design Assistant	A design rules checking tool that allows you to get to design closure faster by reducing the number of iterations needed and by enabling faster iterations with targeted guidance provided by the tool at various stages of compilation.
Fractal synthesis	Enables the Intel Quartus Prime software to efficiently pack arithmetic operations in the FPGA's logic resources resulting in significantly improved performance.
EDA partners	Offers EDA software support for synthesis, functional and timing simulation, static timing analysis, board-level simulation, signal integrity analysis, and formal verification. To see a complete list of partners, visit www.intel.com/fpgaedapartners.

Getting Started Steps

Step 1: Download the free Intel Quartus Prime Lite Edition software
www.intel.com/quartus

Step 2: Get oriented with the Intel Quartus Prime software interactive tutorial.
After installation, open the interactive tutorial on the welcome screen.

Step 3: Sign up for training
www.intel.com/fpgatraining

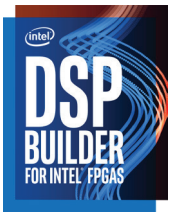
Purchase the Intel Quartus Prime software and increase your productivity today.

INTEL QUARTUS PRIME SOFTWARE		STANDARD EDITION	PRO EDITION[1]	UPGRADE TO PRO EDITION[2]
Fixed	New	$2,995	$3,995	$995
	Renewal	$2,495	$3,395	
Float / Float Add Seats	New	$3,995	$4,995	$995
	Renewal	$3,295	$4,295	

Notes:
1. The Quartus II Subscription Edition software or Intel Quartus Prime Standard Edition software is included when you purchase the Intel Quartus Prime Pro Edition software.
2. Current customers with valid Quartus II Subscription Edition software or Intel Quartus Prime Standard Edition software licenses are eligible to upgrade to Pro Edition. The number of upgrades available for purchase is equal to number of valid Standard or Subscription Edition software licenses.

MODELSIM-INTEL FPGA EDITION SOFTWARE	MODELSIM-INTEL FPGA STARTER EDITION SOFTWARE
$1,995 Renewal $1,695	Free
The ModelSim-Intel FPGA Edition software is available as a $1,995 option for both the Intel Quartus Prime Standard Edition and Lite Edition software. It is 33 percent faster than the Starter Edition software with no line limitation.	Free for both Intel Quartus Prime Standard Edition and Lite Edition software with a 10,000 executable line limitation. The ModelSim-Intel FPGA Starter Edition software is recommended for simulating small FPGA designs.

DSP BUILDER FOR INTEL FPGAS



www.intel.com/dspbuilder

The DSP Builder for Intel FPGAs is a DSP development tool that allows push-button HDL generation of DSP algorithms directly from the MathWorks Simulink environment. This tool adds additional libraries alongside existing Simulink libraries with the DSP Builder for Intel FPGAs (Advanced Blockset) and DSP Builder for Intel FPGAs (Standard Blockset). Intel recommends using the DSP Builder for Intel FPGAs (Advanced Blockset) for new designs. The DSP Builder for Intel FPGAs (Standard Blockset) is not recommended for new designs except as a wrapper for the DSP Builder for Intel FPGAs (Advanced Blockset).

DSP BUILDER FOR INTEL FPGAs FEATURES SUMMARY

The DSP Builder for Intel FPGAs (Advanced Blockset) offers the following features:

- Arithmetic logic unit (ALU) folding to build custom ALU processor architectures from a flat data-rate design
- High-level synthesis optimizations, auto-pipeline insertion and balancing, and targeted hardware mapping
- High-performance fixed- and floating-point DSP with vector processing
- Auto memory mapping
- Single system clock datapath
- Flexible 'white-box' fast Fourier transform (FFT) toolkit with an open hierarchy of libraries and blocks for users to build custom FFTs

Generate resource utilization tables for all designs without the Intel Quartus Prime software compile.

Automatically generate projects or scripts for the Intel Quartus Prime software, the ModelSim-Intel FPGA software, Timing Analyzer, and Platform Designer.

FEATURES	DSP BUILDER FOR INTEL FPGAS (STANDARD BLOCKSET)	DSP BUILDER FOR INTEL FPGAS (ADVANCED BLOCKSET)

Purchase the DSP Builder for Intel FPGAs to meet high-performance DSP design needs today.

PRICING	OPERATING SYSTEM
$1,995 Primary $1,995 Renewal Subscription for one year	Windows/ Linux

Getting Started with the DSP Builder for Intel FPGAs

Step 1: Download the Intel Quartus Prime Pro or Standard Edition software (www.intel.com/quartus):
- Pro Edition to target the latest Intel Agilex, Intel Stratix 10, Intel Arria 10, and Intel Cyclone 10 GX devices.
- Standard Edition to target Intel Arria 10, Intel Cyclone 10 LP, Intel MAX 10, Stratix V, and Cyclone V devices.

Step 2: Purchase additional DSP Builder for Intel FPGAs and MATLAB software licenses:
- DSP Builder for Intel FPGAs software license
- MATLAB software license

Step 3: Follow the following required order of installation:
a. Intel Quartus Prime software
b. MathWorks MATLAB software
c. DSP Builder for Intel FPGAs

Step 4: To view the DSP Builder for Intel FPGAs version history and software requirements, visit the DSP Builder for Intel FPGAs Version History and Software Requirements web page.

Step 5 : To learn how to add your DSP Builder for Intel FPGAs license to your MATLAB installation, refer to the Installing and Licensing DSP Builder for Intel FPGAs web page.

INTEL FPGA SDK FOR OPENCL

www.intel.com/opencl

Intel FPGA SDK for OpenCL[1] allows you to accelerate applications on FPGAs by abstracting away the complexities of FPGA design. Software programmers can write hardware-accelerated kernel functions in OpenCL that is an ANSI C-based language with additional OpenCL constructs to extract parallelism and program heterogeneous platforms. FPGAs are the accelerator of choice for heterogeneous systems, providing low latency, performance, and power efficiency versus GPUs and CPUs.

INTEL FPGA SDK FOR OPENCL SOFTWARE FEATURES SUMMARY	
Offline Compiler	• GCC-based model compiler of OpenCL kernel code
OpenCL Utility	• Diagnostics for board installation • Flash or program FPGA image • Install board drivers (typically PCI Express)
Intel Code Builder for OpenCL API	• Edit, build, and debug OpenCL kernels • Collect runtime performance • View generated reports
Operating System	• Microsoft Windows 10 • Red Hat Enterprise Linux 6 • Read Hat Enterprise Linux 7 • SUSE SLE 12 • Ubuntu 14.04 LTS • Ubuntu 16.04 LTS • Ubuntu 18.04 LTS
Memory Requirements	• Computer equipped with at least 32 GB RAM

Notes:
1. Product is based on a published Khronos Specification, and has passed the Khronos Conformance Testing Process. Current conformance status can be found at www.khronos.org/conformance.

Getting Started with the Intel FPGA SDK for OpenCL

Step 1: Download the Intel Quartus Prime Pro or Standard Edition software (www.intel.com/quartus):
- Pro Edition to target the latest Intel Agilex, Intel Stratix 10, Intel Arria 10, and Intel Cyclone 10 devices.
- Standard Edition to target Stratix IV, Stratix V, Arria II, Arria V, Cyclone IV, Cyclone V, Intel Cyclone 10 LP, and Intel MAX 10 devices.

Note: The software installation file includes the OpenCL software and Intel Quartus Prime Pro or Standard Edition software. The Intel Quartus Prime software requires a license purchase but no additional licenses are required for the Intel FPGA SDK for OpenCL.

Step 2: Download the Intel Board Support Package (BSP) that is needed to run your OpenCL application.
You can also purchase a partner provided BSP, or create a custom BSP.

Step 3: For more information, read the Intel FPGA SDK for OpenCL Getting Started Guide.

INTEL SOC FPGA EMBEDDED DEVELOPMENT SUITE

www.intel.com/soceds

The Intel SoC FPGA Embedded Development Suite (SoC EDS) is a comprehensive tool suite for embedded software development on Intel SoC FPGAs. It comprises development tools, utility programs, and design examples to jump-start firmware and application software development. The Intel SoC EDS is now available in Standard and Pro Editions. The Standard Edition includes extensive support for 28 nm SoC FPGA device families, whereas the Pro Edition is optimized to support the advanced features in the next-generation SoC FPGA device families. In addition, the Intel SoC EDS includes an exclusive offering of the Arm Development Studio Intel SoC FPGA Edition. This toolkit enables embedded developers to code, build, debug, and optimize in a single Eclipse-based IDE. The Arm Development Studio Intel SoC FPGA Edition licenses are available in two options: a free limited license and a paid full-featured license with one year support. A full-featured Arm Development Studio Intel SoC FPGA Edition license is included at no cost with Intel SoC FPGA Development Kits.

Notes:
1. You have to download the Linaro Compiler.
2. These design examples are only available through Rocketboards.org.
3. For Intel Arria 10 SoC only.

SoC FPGA OPERATING SYSTEM SUPPORT

Intel and our ecosystem partners offer comprehensive operating system support for Intel SoC FPGA development boards that support the Arm Cortex-A9 processor.

OPERATING SYSTEM	COMPANY
Abassi	Code Time Technologies
Android	MRA Digital
AUTOSAR MCAL	Intel
Bare-Metal/Hardware Libraries	Intel
Carrier Grade Edition 7 (CGE7)	MontaVista
DEOS	DDC-I
eCosPro	eCosCentric
eT-Kernel	eSOL
FreeRTOS	FreeRTOS.org
INTEGRITY RTOS	Green Hills Software
Linux	Open Source (www.rocketboards.org)
Nucleus	Mentor Graphics

OPERATING SYSTEM	COMPANY
OSE	Enea
PikeOS	Sysgo
QNX Neutrino	QNX
RTEMS	RTEMS.org
RTXC	Quadros System
ThreadX	Express Logic
uC/OS-II, uC/OS-III	Micrium
uC3 (Japanese)	eForce
VxWorks	Wind River
Wind River Linux	Wind River
Windows Embedded Compact 7	Microsoft (Witekio)

NIOS II PROCESSOR

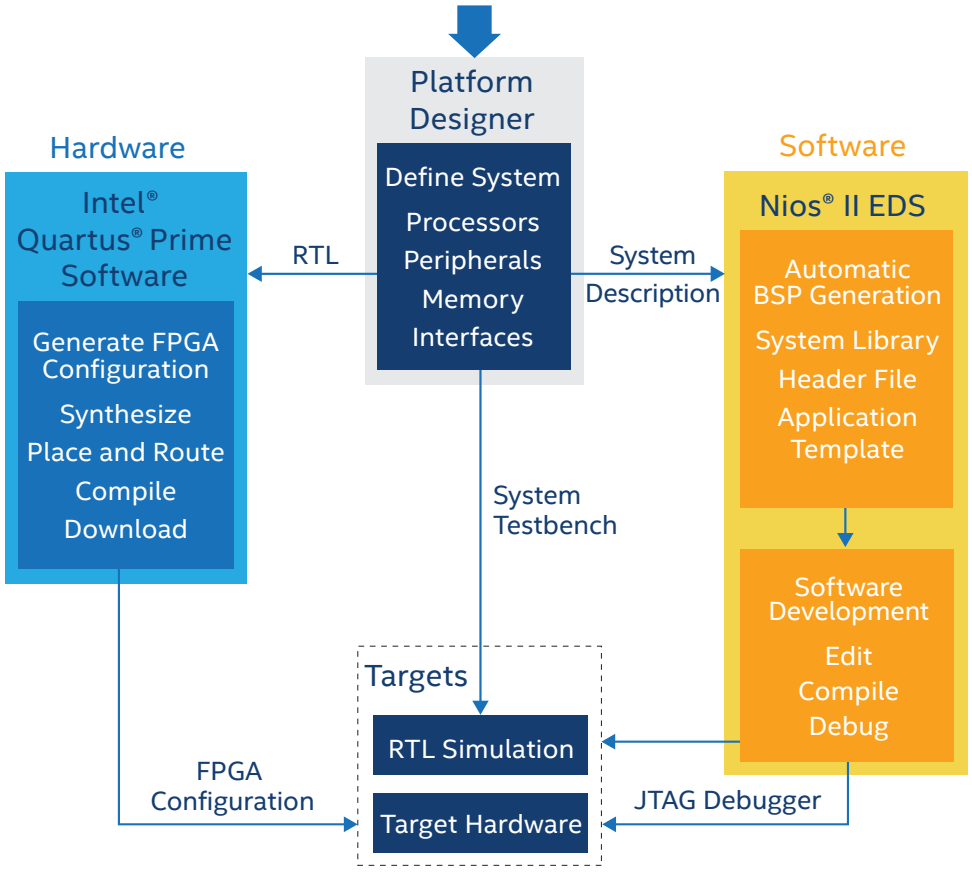
In any Intel FPGA, the Nios II processor offers a custom system solution that has the flexibility of software and the performance of hardware. Through its innovative design, the Nios II processor leverages the logic resources of the device to provide unprecedented hard and soft real-time capabilities.

You can also use the Nios II processor together with the Arm processor in Intel SoCs to create effective multi-processor systems.

With the Nios II processor you can:

- Lower overall system cost and complexity by integrating external processors into the FPGA.
- Scale performance with multiple processors, custom instructions (hardware acceleration of a software function), or co-processor modules (hardware accelerator next to the soft processor).
- Target the Intel Agilex, Intel Stratix, Intel Arria, Intel Cyclone, or Intel MAX 10 FPGA, or the FPGA portion of the Intel Agilex, Intel Stratix 10, Intel Arria 10, Arria V, or Cyclone V SoC.
- Eliminate the risk of processor and ASSP device obsolescence.
- Take advantage of the free Nios II economy core, the free Nios II Embedded Design Suite (EDS), and the free NicheStack TCP/IP Network Stack - Nios II Edition software to get started today.

Nios II Processor Development Flow



NIOS II PROCESSOR EMBEDDED DESIGN SUITE

The Nios II processor, the world's most versatile processor according to Gartner Research, is the most widely used soft processor in the FPGA industry. This soft processor delivers unprecedented flexibility for your cost-sensitive, real-time, safety-critical (DO-254), and applications processing needs. All Intel FPGA families support the Nios II processor.

NIOS II EDS CONTENTS
Nios II Software Build Tools for Eclipse (Nios II SBT for Eclipse) for software development · Based on Eclipse IDE · New project wizards · Software templates · Source navigator and editor
Compiler for C and C++ (GNU)
Software Debugger/Profiler
Flash Programmer
Embedded Software · Hardware Abstraction Layer (HAL) · MicroC/OS-II RTOS (full evaluation version) · NicheStack TCP/IP Network Stack—Nios II Edition · Newlib ANSI-C standard library · Simple file system
Other Intel Command-Line Tools and Utilities
Design Examples

Hardware Development Tools

- Intel Quartus Prime Standard and Pro design software
- Platform Designer
- Signal Tap logic analyzer plug-in for the Nios II processor
- System Console for low-level debugging of Platform Designer systems

Licensing

Getting started with the Nios II processor is now easier than ever. Not only is the Nios II EDS free, but the Nios II economy core IP is also free.

Licenses for the Nios II fast core IP are available stand-alone (IP-NIOS) or as part of the Embedded IP Suite (IPS-EMBEDDED). The Embedded IP Suite is a value bundle that contains licenses for the Nios II processor IP core, DDR1/2/3 Memory Controller IP cores, Triple-Speed Ethernet MAC IP core and 16550 - compatible UART IP core. These licenses support both Nios II Classic and Gen2 processors. These royalty-free licenses never expire and allow you to target your processor design to any Intel FPGA.

Nios II EDS: What You Get for Free!

The Nios II Embedded Design Suite (EDS) provides all the tools and software you need to develop code for the Nios II processor.
With the Nios II EDS you can:

- **Develop software with Nios II SBT for Eclipse:** Based on industry-standard Eclipse, the Nios II SBT is an integrated development environment for editing, compiling, debugging software code, and flash programming.
- **Manage board support packages (BSPs):** The Nios II EDS makes managing your BSP easier than ever. The Nios II EDS automatically adds device drivers for Intel FPGA-provided IP to your BSP, and the BSP Editor provides full control over your build options.
- **Get a free software network stack:** The Nios II EDS includes NicheStack TCP/IP Network Stack - Nios II Edition—a commercial-grade network stack software—for free.
- **Evaluate a RTOS:** The Nios II EDS contains an evaluation version of the popular Micrium MicroC/OS-II RTOS. Product licenses can be purchased directly from Micrium.

Join the Nios II Processor Community!

Be one of many Nios II processor developers who visit the Intel FPGA Wiki, Intel FPGA Community, and the Rocketboards.org website. Intel FPGA Wiki and the Rocketboards.org website have hundreds of design examples and design tips from Nios II processor developers all over the world. Join ongoing discussions on the Nios II processor section of the Intel FPGA Community to learn more about Linux, hardware, and software development for the Nios II processor.

SUMMARY OF NIOS II SOFT PROCESSORS

CATEGORY	PROCESSOR	VENDOR	DESCRIPTION
Power- and cost-optimized processing	Nios II economy core	Intel	With unique, real-time hardware features such as custom instructions, ability to use FPGA hardware to accelerate a function, vectored interrupt controller, and tightly coupled memory, as well as support for industry-leading RTOSs, the Nios II processor meets both your hard and soft real-time requirements, and offers a versatile solution for real-time processing.
Real-time processing	Nios II fast core[1]	Intel	
Applications processing	Nios II fast core	Intel	A simple configuration option adds a memory management unit to the Nios II fast processor core to support embedded Linux. Both open-source and commercially supported versions of Linux for Nios II processors are available.
Safety-critical processing	Nios II SC	HCELL	Certify your design for DO-254 compliance by using the Nios II Safety Critical core along with the DO-254 compliance design services offered by HCELL.
Lockstep Solution	Nios II Lockstep dual core	Intel	Provides high diagnostic coverage, self-checking and advanced diagnostic features in full compliance with functional safety standards IEC 61508 and ISO 26262.
Safety qualification kit (Qkit)	Nios II fast, standard and economy cores	Validas AG	Enables software designers to qualify the use of Nios II Toolchain in their safety application, fulfilling the requirements of IEC 61508 up to SIL 4 and ISO 26262 up to ASIL D.

Notes:
1. With the Nios II Gen2 product the standard core is not available as a pre-configured option, however the Gen2 fast core can be configured in the Platform Designer to have the same feature set as the standard core.

Getting Started

INTEL FPGA AND PARTNER DEVELOPMENT KITS

www.intel.com/fpgaboards

Intel FPGA development kits provide a complete, high-quality design environment for engineers. These kits help simplify the design process and reduce time to market. Development kits include software, reference designs, cables, and programming hardware. Intel FPGA and partner development kits are listed below. For more details about these development kits or other older development kits that are available, check out our online development kits page at www.intel.com/fpgaboards.

PRODUCT AND VENDOR NAME	DESCRIPTION
INTEL STRATIX 10 FPGA KITS	
Intel Stratix 10 GX FPGA Development Kit **Intel**	This kit provides a complete design environment including all hardware and software needed to take advantage of the performance and capabilities of the Intel Stratix 10 GX FPGA. This kit can be used to develop and test PCI Express 3.0 designs, memory subsystem consisting of DDR4, DDR3, QDR IV, and RLDRAM III memories, and develop modular and scalable designs using FPGA mezzanine card (FMC) connectors.
Intel Stratix 10 GX Transceiver Signal Integrity Development Kit **Intel**	This kit provides a complete design environment including all hardware and software needed to take advantage of the performance and capabilities of the Intel Stratix 10 GX FPGA. This kit can be used to evaluate transceiver channel performance, generate and verify pseudo-random binary sequence (PRBS), and dynamically change the channel's differential output voltage (VoD), pre-emphasis, and equalization settings.
Intel Stratix 10 SX SoC Development Kit **Intel**	The kit offers a quick and simple approach for developing custom Arm processor-based SoC designs. It offers memory options, such as HiLo DDR4 and DDR4 SODIMM. There are also two FMC+ low-pin-count connectors and two quad small form factor pluggable (QSFP) connectors for transceiver channel performance. More notably, the kit offers two HPS peripheral daughtercards to expand the capabilities.
Intel Stratix 10 TX Signal Integrity Development Kit **Intel**	This kit offers a complete design environment for developing on the Intel Stratix 10 TX FPGA. It can evaluate E-Tile transceiver channel performance up to 58 Gbps PAM4 and 30 Gbps NRZ. The board has different QSFP-DD, FMC+, MXP, and SMA connectors for networking applications. It can also be used for jitter analysis and to verify physical medium attachment (PMA) compliance for 10/25/50G/100G/200G/400G Ethernet and other major standards.
Intel Stratix 10 MX FPGA Development Kit **Intel**	This kit can be used to test and develop designs using the Intel Stratix 10 MX FPGA, which features High-Bandwidth Memory (HBM). PCIe 3.0 designs can be developed as the board contains a PCIe end point connector and a PCIe root port connector. The board also contains a DIMM socket and HiLO connector for expanded memory capability.
S10VG4 **BittWare Inc.**	This PCI Express card is based on the Intel Stratix 10 FPGA and is ideal for high-density data center applications. BittWare's Viper platform offers support for large FPGA loads, up to 32 GB of DDR4 SDRAM, and 4x100 Gbps Ethernet. The card is enabled for high-speed networking with four front panel QSFP+ cages, each supporting 40/100GbE or four 10/25GbE channels. Serial expansion is available through two UltraPort SlimSAS connectors. A 1GbE interface, a pulse-per-second (PPS) input, and a USB interface are available for debug and support. The board's flexible memory configuration includes four DIMM sites that support DDR4 SDRAM and QDR.
Nallatech 520 **Nallatech**	This is a PCI Express accelerator card based on the Intel Stratix 10 FPGA designed to address a range of compute-intensive and latency-critical applications including machine learning, gene sequencing, oil and gas, and real-time network analytics. This introduces the ground-breaking single precision floating-point performance of up to 10 TFLOPS per device.

PRODUCT AND VENDOR NAME	DESCRIPTION
INTEL ARRIA 10 FPGA KITS	
Intel Arria 10 FPGA Development Kit **Intel**	This kit provides a complete design environment including hardware and software for prototyping and testing high-speed serial interfaces to an Intel Arria 10 GX FPGA. This kit includes the PCI Express x8 form factor, two FMC connectors for expandability, Ethernet, USB, and SDIs. The board includes one HiLo connector for plugging in DRAM and SRAM daughtercards. Supported daughtercard formats include DDR4 x72 SDRAM, DDR3 x72 SDRAM, RLDRAM 3 x36, and QDR IV x36 SRAM. The board includes SMA connectors for transceiver output, clock output, and clock input. Several programmable oscillators are available and other user interfaces include user push buttons, dual in-line package (DIP) switches, bi-color user LEDs, an LCD display, power, and temperature measurement circuitry. This development kit comes with a one-year license for the Intel Quartus Prime design software.
Intel Arria 10 FPGA Signal Integrity Kit **Intel**	This kit enables a thorough evaluation of transceiver signal integrity and device interoperability. Features include six full-duplex transceiver channels with 2.4 mm SMA connectors, four full-duplex transceiver channels to Amphenol Xcede+ backplane connector, four full-duplex transceiver channels to C form factor pluggable (CFP2) optical interface, four full-duplex transceiver channel to QSFP+ optical interface, one transceiver channel to SFP+ optical interface, and ten full-duplex transceiver channels to Samtec BullsEye high-density connector. This board also includes several programmable clock oscillators, user pushbuttons, DIP switches, user LEDs, a 7-segment LCD display, power and temperature measurement circuitry, Ethernet, an embedded Intel FPGA Download Cable II, and JTAG interfaces. This development kit comes with a one-year license for the Intel Quartus Prime design software.
Intel Arria 10 SoC Development Kit **Intel**	This kit offers a quick and simple approach for developing custom Arm processor-based SoC designs. The Intel Arria 10 SoCs offers full software compatibility with previous generation SoCs, a broad ecosystem of Arm software and tools, and an enhanced FPGA and DSP hardware design flow. This kit includes an Intel Arria 10 10AS066N3F40I2SG SoC, PCI Express Gen3 protocol support, a dual FMC expansion headers, two 10/100/1000 SGMII Ethernet ports, one 10/100/1000 RGMII Ethernet port, two 10GbE small form factor pluggable (SFP) cages, two 1GB DDR4 HPS HiLo memory card, DDR4 SDRAM, NAND, quad SPI, SD/MICRO boot flash cards, character LCD, display port, and SDI port.
Attila Instant-Development Kit Intel Arria 10 FPGA FMC IDK **REFLEX**	This kit provides out-of-the-box experience, combining compact hardware platform and an efficient intuitive software environment. This kit is designed for high-performance serial transceiver applications using Intel Arria 10 GX 1150 KLEs. Hardware, software design tools, IP, and pre-verified reference designs included. Its unique installation and GUI allows an immediate start, and its reference designs enable fast turn-around designs, shortening and securing the developments.
Alaric Instant-Development Kit Intel Arria 10 SoC FMC IDK **REFLEX**	This kit provides out-of-the-box experience, combining compact hardware platform and an efficient intuitive software environment. This kit is designed for high-performance serial transceiver applications using an Intel Arria 10 SoC with 660 KLEs and an Arm dual-core Cortex-A9 MPCore. Its unique installation and GUI allows an immediate start, and its reference designs enable fast turn-around designs, shortening and securing the developments.
Nallatech 510T **Nallatech**	Nallatech 510T is an FPGA co-processor that is designed to deliver ultimate performance per watt for compute-intensive data center applications. The 510T is a GPU-sized 16-lane PCI Express Gen3 card featuring two of Intel's new floating-point enabled Intel Arria 10 FPGAs delivering up to 16 times the performance of the previous generation†. Applications can achieve a total sustained performance of up to 3 TFLOPS.
INTEL CYCLONE 10 FPGA KITS	
Intel Cyclone 10 LP Evaluation Kit **Intel**	This kit provides an easy-to-use platform for evaluating Intel Cyclone 10 LP FPGA technology and Intel Enpirion regulators. This evaluation board enables you to develop designs for Intel Cyclone 10 LP FPGAs via Arduino UNO R3 shields, Digilent Pmod Compatible cards, GPIOs, or Ethernet connector. This kit also measures key Intel Cyclone 10 LP FPGA power supplies and reuse the kit's PCB schematic as a model for your design.
Intel Cyclone 10 GX FPGA Development Kit **Intel**	This kit is an ideal starting point for developing applications, such as embedded vision, factory automation, and surveillance. With this development kit, you can develop Intel Cyclone 10 GX FPGA-based designs with expansion through PCIe Gen2, USB 3.1, SFP+, and RJ-45.

PRODUCT AND VENDOR NAME	DESCRIPTION
INTEL MAX 10 FPGA KITS	
Intel MAX 10 FPGA Nios II Embedded Evaluation Kit (NEEK) **Terasic**	This kit is a full featured embedded evaluation kit based on the Intel MAX 10 device family. The kit delivers an integrated platform that includes hardware, design tools, IP, and reference designs for developing a wide range of applications. This kit allows developers to rapidly customize their processor and IP to suit their specific needs, rather than constraining their software around the fixed feature set of the processor. The kit features a capacitive LCD multimedia color touch panel, which natively supports multi-touch gestures. An eight megapixel digital image sensor, ambient light sensor, and three-axis accelerometer make up this rich feature set, along with a variety of interfaces connecting the kit to the outside for Internet of Things (IoT) applications across markets.
Intel MAX 10 FPGA Development Kit **Intel**	This kit offers a comprehensive general-purpose development platform for many markets and applications, such as industrial and automotive. This fully featured development kit includes a 10M50DAF484C6G device, DDR3 memory, 2X 1 GbE, high-speed mezzanine card (HSMC) connector, quad serial peripheral interface, 16 bit digital-to-analog converter (DAC), flash memory, and 2X Digilent Pmod Compatible headers.
Intel MAX 10 FPGA Evaluation Kit **Intel**	The 10M08 evaluation board provides a cost-effective entry point to Intel MAX 10 FPGA design. The card comes complete with an Arduino header socket, which lets you connect a wide variety of daughtercards. Other features include an Intel MAX 10 10M08SAE144C8G device, Arduino shield expansion, access to 80 I/O through-holes, and a prototyping area.
DECA Intel MAX 10 FPGA Evaluation Kit **Arrow**	DECA is a full-featured evaluation kit featuring a 10M50DAF484C6G device. The kit includes a BeagleBone-compatible header for further I/O expansion, a variety of sensors (gesture/humidity/ temperature/CMOS), MIPI CSI-2 camera interface, LEDs, pushbuttons, and an on-board Intel FPGA Download Cable II.
Mpression Odyssey Intel MAX 10 FPGA IoT Evaluation Kit **Macnica**	The Macnica Intel MAX 10 FPGA evaluation kit connects and controls your FPGA design via Bluetooth using the Mpression Odyssey Smartphone application. This kit also includes a10M08U169C8G device, SDRAM, Arduino shield expansion capability, and Bluetooth SMART connectivity module.
STRATIX V FPGA KITS	
Stratix V Advanced Systems Development Kit **Intel**	This kit is a complete systems design environment that includes both the hardware and software needed to begin architecture development and system design using Stratix V FPGAs. The PCI Express-based form factor utilizes a x16 edge connector, and includes high memory bandwidth to DDR3, QDR II+, and serial memory. Multiple high-speed protocols are accessible through FMC and HSMC connections. A one year license for the Intel Quartus Prime design software is available with this kit.
Stratix V GX FPGA Development Kit **Intel**	This kit provides a full-featured hardware development platform for prototyping and testing high-speed serial interfaces to a Stratix V GX FPGA. This kit includes the PCI Express x8 form factor, two HSMC connectors for expandability, and Ethernet, USB, and SDI interfaces. Memory includes one x72 DDR3 SDRAM, one RLDRAM II x18 QDR II+ SRAM, and flash memory. This kit also includes two SMA connectors for a differential transceiver output. Several programmable oscillators are available and other user interfaces include three user pushbuttons, one 8-position DIP switch, 16 user LEDs, an LCD display, and power and temperature measurement circuitry.
Transceiver Signal Integrity Development Kit, Stratix V GX Edition **Intel**	This kit enables a thorough evaluation of transceiver signal integrity and device interoperability. Features include seven full-duplex transceiver channels with SMA connectors, two 14G backplane connectors (from Amphenol and Molex), four programmable clock oscillators, four user pushbuttons, one 8-position DIP switch, eight user LEDs, a 7-segment LCD display, power and temperature measurement circuitry, and Ethernet, an embedded Intel FPGA Download Cable, and JTAG interfaces.
Transceiver Signal Integrity Development Kit, Stratix V GT Edition **Intel**	The Stratix V GT Transceiver Signal Integrity Development Kit provides a platform for electrical compliance testing and interoperability analysis. The accessibility to multiple channels allows for real-world analysis as implemented in the system with transceiver channels available through SMA and popular backplane connectors. This development kit can be used for evaluation of transceiver link performance up to 25.7 Gbps, generation and checking pseudo-random binary sequence (PRBS) patterns via an easy-to-use GUI that does not require the Intel Quartus Prime software, access advanced equalization to fine-tune link settings for optimal bit error ratio (BER), jitter analysis, and verifying physical media attachment (PMA) interoperability with Stratix V GT FPGAs for targeted protocols, such as CEI-25/28G, CEI-11G, PCI Express Gen 3.0, 10GBASE-KR, 10 Gigabit Ethernet, XAUI, CEI-6G, Serial RapidIO, HD-SDI, and others. You can use the built-in high speed backplane connectors to evaluate custom backplane performance and evaluate link BER.
100G Development Kit, Stratix V GX Edition **Intel**	This kit enables a thorough evaluation of 100G designs. It supports 10G/40G line interfaces through optical modules, and applications requiring external memory interfaces through one x18 QDR II and six x32 DDR3 memory banks. With this kit, you can evaluate transceiver performance up to 12.5 Gbps, and verify PMA compliance to standards, such as 10G/40G/100G Ethernet, Interlaken, CEI-6G/11G, Serial RapidIO, PCI Express (Gen1, Gen2, and Gen3), and other major standards. This kit can also validate interoperability between optical modules, such as SFP, SFP+, QSFP, and CFP.
DSP Development Kit, Stratix V Edition **Intel**	The DSP Development Kit, Stratix V Edition provides a complete design environment that includes all the hardware and software you need to begin developing DSP intensive FPGA designs immediately. The development kit is RoHS-compliant. You can use this development kit to develop and test PCI Express designs at data rates up to Gen3, develop and test memory subsystems for DDR3 SDRAM or QDR II SRAM memories, and use the HSMC connectors to interface to one of over 35 different HSMCs provided by Intel partners, supporting protocols such as Serial RapidIO, 10 Gbps Ethernet, SONET, CPRI, OBSAI, and others.

PRODUCT AND VENDOR NAME	DESCRIPTION
ARRIA V FPGA AND SoC KITS	
Arria V GX Starter Kit, Arria V GX Edition **Intel**	This kit provides a low-cost platform for developing transceiver I/O-based Arria V GX FPGA designs. This kit includes the PCI Express x8 form factor, one HSMC connector, a 32 bit DDR3 SDRAM device, one-channel high-speed transceiver input and output connected to SMAs, HDMI output, SDI input and output, 16x2 LCD display, and flash memory.
Arria V SoC Development Kit and SoC Embedded Design Suite **Intel**	The Arria V SoC Development Kit offers a quick and simple approach to develop custom Arm processor-based SoC designs. Intel's midrange, transceiver-based Arria V FPGA fabric provides the highest bandwidth with the lowest total power for midrange applications such as remote radio units, 10G/40G line cards, medical imaging, broadcast studio equipment, and the acceleration of image- and video-processing applications. This development kit includes the SoC Embedded Design Suite software development tools. The development board has PCI Express Gen2 x4 lanes (endpoint or rootport), two FMC expansion headers, dual Ethernet PHYs, and various DRAM and flash memories.
CYCLONE V FPGA AND SoC KITS	
Cyclone V E FPGA Development Kits **Intel**	The Cyclone V E Development Kit offers a comprehensive general-purpose development platform for many markets and applications, including industrial, networking, military, and medical applications. The kit features an Intel Cyclone V device and a multitude of onboard resources including multiple banks of DDR3 and LPDDR2 memory, LCD character display, LEDs, user switches, USB, and RJ-45 connectors. The Cyclone V E FPGA Development Kit gives industrial equipment designers greater flexibility in implementing real-time Ethernet communications with industrial Ethernet IP cores.
Cyclone V GT FPGA Development Kit **Intel**	This kit can be used to prototype Cyclone V GT FPGA or Cyclone V GX FPGA applications. It offers a quick and simple way to develop low-cost and low-power system-level designs and achieve rapid results. This kit supports a myriad of functionalities, such as FPGA prototyping, FPGA power measurement, transceiver I/O performance up to 5 Gbps, PCI Express Gen2 x4 (at 5 Gbps per lane), endpoint or rootport support.
Cyclone V SoC Development Kit **Intel**	The Cyclone V SoC Development Kit offers a quick and simple approach to develop custom Arm processor-based SoC designs accompanied by Intel's low-power, low-cost Cyclone V FPGA fabric. This kit supports a wide range of functions, such as processor and FPGA prototyping and power measurement, industrial networking protocols, motor control applications, acceleration of image- and video-processing applications, PCI Express x4 lane with ~1,000 MBps transfer rate (endpoint or rootport).
Cyclone V GX Starter Kit **Terasic Technologies**	The Cyclone V GX Starter Kit offers a robust hardware design platform based on Cyclone V GX FPGA. This kit is optimized for the lowest cost and power requirement for transceiver applications with industry-leading programmable logic for ultimate design flexibility. The Cyclone V Starter Kit development board includes hardware, such as Arduino Header, on-board Intel FPGA Download Cable circuit, audio and video capabilities, and an on-board HSMC connector with high-speed transceivers that allows for an even greater array of hardware setups.
DE0-Nano-SoC Kit **Terasic Technologies**	The DE0-Nano-SoC Kit combines a robust, Cyclone V SoC-based development board and interative reference designs into a powerful development platform. This low-cost kit is an interactive, web-based guided tour that lets you quickly learn the basics of SoC development and provides an excellent platform on which to develop your own design. The board includes a Gigabit Ethernet port, USB 2.0 OTG port, SD card flash, 1 GB DDR3 SDRAM, an Arduino header, two 40-pin expansion headers, on-board Intel FPGA Download Cable circuit, 8-channel A/D converter, accelerometer, and much more.
MAX V CPLD KITS	
MAX V CPLD Development Kit **Intel**	This low-cost platform will help you quickly begin developing low-cost, low-power CPLD designs. Use this kit as a stand-alone board or combined with a wide variety of daughtercards that are available from third parties. With this platform, you can develop designs for the 5M570Z CPLD and build upon example designs provided.
STRATIX IV FPGA KITS	
100G Development Kit, Stratix IV GT Edition **Intel**	This kit enables a thorough evaluation of 100G designs. It supports 10G/40G line interfaces through optical modules, and applications requiring external memory interfaces through four x18 QDR II and four x32 DDR3 memory banks. With this kit, you can evaluate transceiver performance up to 11.3 Gbps, verify PMA compliance to standards, such as 10G/40G/100G Ethernet, Interlaken, CEI-6G/11G, Serial RapidIO, PCI Express (Gen1, Gen2, and Gen3), and other major standards. This kit can also validate interoperability between optical modules, such as SFP, SFP+, QSFP, and CFP.

PRODUCT AND VENDOR NAME	DESCRIPTION
CYCLONE IV FPGA KITS	
Cyclone IV GX FPGA Development Kit **Intel**	This kit provides a comprehensive design environment that allows you to quickly develop low-cost and low-power FPGA system-level designs. This kit includes the PCI Express short card form factor, two HSMC connectors, and a 10/100/1000 Mbps Ethernet interface. Onboard memory includes 128 MB DDR2 SDRAM, 64 MB flash, and 4 MB SSRAM. This kit also includes SMA connectors, and 50 MHz, 100 MHz, and 125 MHz clock oscillators, as well as user interfaces including pushbuttons, LEDs, and a 7-segment LCD display.
DEO-Nano Development Board **Terasic Technologies**	The DE0-Nano Development Board is a compact-sized FPGA development platform suited for prototyping circuit designs such as robots and "portable" projects. The board is designed to be used in the simplest possible implementation targeting the Cyclone IV device up to 22,320 LEs. This kit allows you to extend designs beyond the DE0-Nano board with two external general-purpose I/O (GPIO) headers and allows you to handle larger data storage and frame buffering with on-board memory devices including SDRAM and EEPROM. This kit is lightweight, reconfigurable, and suitable for mobile designs without excessive hardware. This kit provides enhanced user peripheral with LEDs and push buttons and three power scheme options including a USB Mini-AB port, 2-pin external power header, and two DC 5-V pins.
Industrial Networking Kit **Terasic Technologies**	The Industrial Networking Kit (INK) offers a comprehensive development platform for industrial automation and applications. The kit consists of the DE2-115 board featuring the Cyclone IV device and dual 10/100/1000-Mbps Ethernet, 128 MB SDRAM, 8 MB flash memory, 2 MB SRAM, HSMC and GPIO connectors, USB 2.0, an SD card slot, switches and buttons, LEDs, 16x2 display, audio and video, and VGA-out. The kit also includes an Industrial Communications Board (ICB-HSMC) that supports RS-485, RS-232, CAN, and additional I/O expansion.
DE2-115 Development and Education Board **Terasic Technologies**	This board is part of the DE2 educational development board series and features the Cyclone IV E EP4CE115 FPGA. The DE2-115 offers an optimal balance of low cost, low power, and a rich supply of logic, memory and DSP capabilities, as well as interfaces to support mainstream protocols including GbE. A HSMC connector is provided to support additional functionality and connectivity via HSMC daughtercards and cables.
MAX II CPLD Kits	
MAX II/MAX IIZ Development Kit **System Level Solutions**	This board provides a hardware platform for designing and developing simple and low-end systems based on MAX II or MAX IIZ devices. The board features a MAX II or MAX IIZ EPM240T100Cx or EPM240ZM100Cx device with 240 LEs and 8,192 bits of user flash memory (UFM). The board also supports vertical migration into EPM570T100Cx devices with 570 LEs and 8,192 bits of UFM.

SoC SYSTEM ON MODULES

www.intel.com/fpgasoms

System on modules (SoMs) provide a compact, pre-configured memory and software solution perfect for prototyping, proof-of-concept, and initial system production. SoMs enable you to focus on your IP, algorithms, and human/mechanical interfaces rather than the fundamentals of the SoC and electrical system and software bring-up. In some cases, SoMs can also make sense for full system production.

The following Intel SoC-based SoMs are available now from Intel FPGA DSN partners:

PARTNER	SOM	INTEL DEVICE	MAIN MEMORY[1]	MODULE IMAGE
Aries Embedded	MX10	Intel MAX 10 FPGA	512 MB DDR3 SDRAM	
Alorium Technology	Snō	Intel MAX 10 FPGA	2 KB Data SRAM, 32 KB Program	Critical Link	MitySOM-5CSX	Cyclone V SoC	Up to 2 GB DDR3 with ECC	
DENX Computer Systems	MCV	Cyclone V SoC	1 GB DDR3 SDRAM	Dream Chip	Intel Arria 10 System on Module	Intel Arria 10 SoC	6 GB DDR4 SDRAM with ECC	
Enclustra	Mercury SA Mercury+ SA2	Cyclone V SoC	Up to 2 GB DDR3L SDRAM	Enclustra	Mercury+ AA1	Intel Arria 10 SoC	8 GB DDR4 SDRAM with ECC	

Notes:

1. Processor main memory only. Additional FPGA, flash memory, eMMC, microSD, SD/MMC, and EEPROM memory may be provided but is not shown in this table. Consult SoM vendor specifications for complete memory details.

PARTNER	SOM	INTEL DEVICE	MAIN MEMORY[1]	MODULE IMAGE
Enterpoint	Larg 2	Cyclone V SoC	512 M Byte DDR3 SDRAM	
EXOR International	uS02 microSOM	Cyclone V SoC	1 GB DDR3 SDRAM	
iWave Systems	Qseven Module	Cyclone V SoC	512 MB DDR3 SDRAM with ECC	
iWave Systems	iW-Rainbow-G24M	Intel Arria 10 SoC	1 GB DDR4 SDRAM, Others upon request.	Macnica	Borax SoM	Cyclone V SoC	1 GB DDR3 SDRAM[1]	REFLEX	Achilles	Intel Arria 10 SoC	8 GB DDR4 SDRAM	NovTech	NOVSOM CV NOVSOM CVlite	Cyclone V SoC	Up to 2 GB DDR3 SDRAM with ECC	
Notes:

1. Processor main memory only. Additional FPGA, flash memory, eMMC, microSD, SD/MMC, and EEPROM memory may be provided but is not shown in this table. Consult SoM vendor specifications for complete memory details.

For more information about Intel SoC system on modules, visit www.intel.com/fpgasoms.

SINGLE-BOARD COMPUTER

While a SoM must be plugged into a carrier board to access the I/Os, single-board computers (SBC) integrate I/O connectors along with the processor and memory. The SBC offering supports a variety of embedded operating systems and provides an integrated FPGA SoC hardware and software solution that accelerates time to market for production OEM and maker markets.

The following Intel SoC-based SBC is available now from Intel FPGA DSN partners:

PARTNER	SBC	INTEL DEVICES	MAIN MEMORY	MODULE IMAGE
Embedded Planet	EP5CSXxS Single-board computer	Cyclone V SoC	Up to 1 GB DDR3 SDRAM	
DESIGN STORE

fpgacloud.intel.com/devstore/

The Design Store contains Intel and partner FPGA design examples to assist you in designing with Intel FPGAs and associated development tools. Design examples are cataloged by development kit, Intel Quartus software versions, and IP for easy search. These design examples showcase a wide range of interface IP, core function IP, configuration, embedded, and end applications. New content is continuously added and updated for all product families. Adjunct sites containing Intel FPGA content such as the rocketboards.org embedded Linux site are also cataloged through the Design Store.

Check out the Design Store now: fpgacloud.intel.com/devstore

INTEL FPGA PARTNER PROGRAM

www.intel.com/fpgapartners

FPGA Partner Program

The Intel FPGA Partner Program brings together a broad ecosystem of global partners with a shared mission to accelerate the adoption of Intel FPGAs. The partner ecosystem is diverse; it includes solution or IP partners that build innovative FPGA solutions, and channel companies that help with scale and go-to-market. The FPGA Partner Program was developed to facilitate the relationships, tools, and training needed to ensure partner success in bringing innovative new high-performance solutions to market.

Faster Time to Market

The FPGA Partner Program provides training, certification, hardware and software development tools, and technical support to enable partners to build innovative FPGA solutions and get to market quickly.

Connecting with Other Ecosystem Partners

The FPGA Partner Program connects channel partners, systems integrators, original equipment manufacturers, and other go-to-market organizations with innovative solution partners, such as independent software vendors and original development manufacturers. These collaborations help to provide a channel to market for validated and tested FPGA-based solutions.

Expanding Ecosystem Knowledge

The FPGA Partner Program enhances its partners' innovation through training and competency programs that qualify and train FPGA partners. The program leverages unique Intel tools such as the FPGA Developer Cloud which provides a cloud environment for testing and validating solutions. Through training, testing and certification, partners can bring innovations to market quickly and customers can trust that they deliver value.

FPGA Partner Program Titanium

Titanium members have market-ready FPGA solutions as well as a high level of Intel FPGA knowledge and experience.

FPGA Partner Program Gold

Gold members offer a range of solutions across a broad set of Intel FPGA products. They also have an expansive knowledge of FPGA technology.
For more information about the program including program benefits and criteria, visit our **FPGA Partner Program** portal. If you have any questions, please contact us at **PSG.Ecosystem.Team@intel.com**.

INTEL DESIGN SOLUTIONS NETWORK

www.intel.com/dsn

FPGA Design Solutions Network

Intel's FPGA Design Solutions Network (DSN) is a global ecosystem of independent, qualified companies that offer an extensive portfolio of design services, IP, accelerator functions, and board products to help customers accelerate their time to market and lower product development risks. DSN members have expertise designing with Intel FPGA products and offer design services ranging from selecting the right devices for a new product design, to multiboard system-level designs and IP integration.

ACCELERATE PRODUCT DEVELOPMENT

- Use off-the-shelf IP, boards, commercial off-the-shelf (COTS) products, or solutions to reduce your development time
- Consult with a member to help you select the right FPGA, SoC, or Intel Enpirion devices
- Get help with new product design feasibility or complex high-performance system design

MINIMIZE PRODUCT DEVELOPMENT RISKS

You can quickly locate members who offer:

- Intel FPGA, SoC, or Enpirion engineering design services
- Custom development kits, modules, boards, COTS, or IP
- Comprehensive end-market application and Intel FPGA expertise
- Prototyping, compliance, and manufacturing support

SUPPORT FROM INTEL

- Members must meet the established criteria to maintain the DSN program membership
- Members qualify for Intel benefits to accelerate customer support

FPGA Design Solutions Network
Platinum

Platinum members have the highest level of Intel customer project design or IP/board/COTS product experience.

FPGA Design Solutions Network
Gold

Gold members offer a wide range of Intel FPGA, application, or solution expertise across our product families.

Visit www.intel.com/dsn to search for DSN Platinum and Gold partners offering FPGA design services, IP, or boards. You can also search by end-market application, Intel FPGA, geography, or expertise.

TRAINING OVERVIEW

www.intel.com/fpgatraining

We offer an extensive curriculum of classes to deepen your expertise. Our classes are beneficial whether you're new to FPGA, CPLD, and SoC design, or are an advanced user wanting an update on the latest tools, tips, and tricks. Our training paths are delivered in four ways:

ONLINE AND SELF-PACED TRAINING	INSTRUCTOR-LED VIRTUAL / ONLINE CLASSROOM	ON-SITE INSTRUCTOR-LED TRAINING	ENGINEER-TO-ENGINEER HOW-TO VIDEOS
Generally 30 minutes long, features pre-recorded presentations and demonstrations. Online classes are free and available at any time, from any computer with Internet access with non-restrictive firewall. You can find some of these online training courses on the **Intel FPGA Technical Training YouTube Channel**.	Involves live instructor-taught training supplemented with hands-on exercises. Taught virtually using a WebEx connection and Internet access with non-restrictive firewall. Allowing you to benefit from the interactivity with an instructor from the comfort of your home or office. Classes are taught in 4.5-hour sessions across consecutive days.	Typically lasting one or more days, involves in-person instruction with hands-on exercises usually with development boards either onsite or via remote connection through WebEx. Classes conducted from an Intel or Intel partner subject matter expert. Fees vary.	These short how-to YouTube videos teach specific skills and help solve your issues. Refer to the **Engineer-to-engineer YouTube Channel**.

Learn more about our training program or sign up for classes at **www.intel.com/fpgatraining**. Start sharpening your competitive edge today!

To help you decide which courses might be most useful to you, we've grouped classes into specific curricula levels. Select the persona that your work most closely aligns with to view your recommended training curriculum:

- **Software Developer for Host Application**
- **Software Developer for Acceleration Using OpenCL**
- **Software Developer for Acceleration using C/C++**
- **FPGA Designer: What's New – Intel Agilex FPGAs**

Training material is broken up into various levels of depth. 100 level courses focus on introduction and high-level overviews. 200 level courses cover the first level of how to do something but require a basic understanding of the topic that is covered in 100 level courses. 300 level courses go down to a much deeper technical or specific level of knowledge.

Instructor-Led and Virtual Classes

VIRTUAL CLASSROOM COURSES DENOTED WITH A■
(ALL COURSES ARE ONE DAY IN LENGTH UNLESS OTHERWISE NOTED)

COURSE CATEGORY	GENERAL DESCRIPTION	COURSE TITLES
High-Level Design	Accelerate algorithm performance with Open Computing Language (OpenCL) by offloading to an FPGA.	• OpenCL on FPGAs for Parallel Software Programmers■ • Introduction to OpenCL Programs for Intel FPGA■ • Optimizing OpenCL Programs for Intel FPGAs (16 Hours Course)■ • Introduction to High-Level Synthesis with Intel FPGAs■ • High-Level Synthesis Advanced Optimization Techniques■
Design Languages	Attain the skills needed to design with Verilog HDL and VHDL for programmable logic.	• Introduction to VHDL■ • Advanced VHDL Design Techniques■ • Introduction to Verilog HDL■ • Advanced Verilog HDL Design Techniques■
Intel Quartus Prime Software	Acquire design entry, compilation, programming, verification, and optimization skills by learning how to use both basic and advanced features of the Intel Quartus Prime software.	• The Intel Quartus Prime Software: Foundation■ • The Intel Quartus Prime Software: Foundation for Xilinx Vivado Design Suite Users■ • Intel Quartus Prime Software: Pro Edition Features for High-End Designs■ • The Quartus Software Debug Tools • The Intel Quartus Prime Software Design Series: Timing Analysis with Timing Analyzer■ • Advanced Timing Analysis with Timing Analyzer■ • Timing Closure with the Quartus II Software■ • Partial Reconfiguration with Intel FPGAs■
Design Optimization Techniques	Learn design techniques and Intel Quartus Prime software features to improve design performance. Note: While the focus of this course is the Intel Stratix 10 device family, many of the techniques you will learn can be used to improve performance in other device architectures.	• Performance Optimization with Intel Stratix 10 FPGA Hyperflex Architecture■ • Advanced Optimization with Intel Stratix 10 FPGA Hyperflex Architecture■ • The Intel Hyperflex FPGA Optimization Workshop■
System Integration	Build hierarchical systems by integrating IP and custom logic.	• Introduction to the Platform Designer System Integration Tool■
Embedded System Design	Learn to design an Arm-based or Nios II processor system in an Intel FPGA.	• Designing with the Nios II Processor • Developing Software for the Nios II Processor • Using Intel SoC FPGAs■
System Design	Solve DSP and video system design challenges using Intel technology.	• Designing with DSP Builder for Intel FPGAs■
Connectivity Design	Build high-speed, gigabit interfaces using embedded transceivers found in leading-edge FPGA families.	• Building Interfaces with Arria 10 High-Speed Transceivers■ • Building Gigabit Interfaces in 28 nm Devices • Creating PCI Express Links Using FPGAs

Online Training

FREE ONLINE TRAINING COURSES (COURSES ARE APPROXIMATELY 30 MINUTES LONG)

COURSE CATEGORY	COURSE TITLES	LANGUAGES
Getting Started	Read Me First!	English, Chinese, and Japanese
	Basics of Programmable Logic: FPGA Architecture	English, Chinese, and Japanese
	Basics of Programmable Logic: History of Digital Logic Design	English, Chinese, and Japanese
	How to Begin a Simple FPGA Design	English, Chinese, and Japanese
	Become an FPGA Designer in 4 Hours	English only
	FPGA Business Fundamentals	English and Japanese
Acceleration	Introduction to the Acceleration Stack for Intel Xeon CPU with FPGAs	English, Chinese, and Japanese
	Introduction to Intel FPGAs for Software Developers	English only
	Programmers' Introduction to the Intel FPGA Deep Learning Acceleration Suite	English and Japanese
	Performance Tuning Architectures with the Intel FPGA Deep Learning Acceleration Suite	English only
	OpenCL Development with the Acceleration Stack for Intel Xeon CPU with FPGA	English and Chinese
	Building RTL Workloads for the Acceleration Stack for Intel Xeon CPU with FPGAs	English and Chinese
	Application Development on the Acceleration	English and Chinese
	Introduction to Apache Hadoop	English only
	Introduction to Apache Spark	English only
	Introduction to Kafka	English only
	Introduction to High Performance Computing (HPC)	English and Japanese
	Intel Programmable Acceleration Card (PAC) Getting Started	English and Japanese
	Building an Accelerator Functional Unit for the Intel FPGA Programmable Acceleration Card N3000	English only
Deep Learning	Getting Started with the Intel Distribution of OpenVINO™ toolkit with FPGAs	English only
	Introduction to Deep Learning	English only
	Programmers' Introduction to the Intel FPGA Deep Learning Acceleration Suite	English, Japanese and Chinese
	Deploying Intel FPGAs for Deep Learning Inferencing with OpenVINO Toolkit	English only
OpenCL	Introduction to Parallel Computing with OpenCL Programs on FPGAs	English, Japanese, and Chinese
	Introduction to OpenCL on FPGAs for Parallel Programmers	English and Chinese
	Writing OpenCL Programs for Intel FPGAs	English, Japanese, and Chinese
	Running OpenCL Programs on Intel FPGAs	English, Japanese, and Chinese
	Using Channels and Pipes with OpenCL on Intel FPGAs	English only
	OpenCL: Single-Threaded versus Multi-Threaded Kernels	English, Japanese, and Chinese
	OpenCL Optimization Techniques: Image Processing Algorithm Example	English only
	OpenCL Optimization Techniques: Secure Hash Algorithm Example	English only
	Memory Optimization for OpenCL on Intel FPGAs	English only
	OpenCL Coding Optimizations for Intel Stratix 10 Devices	English only
	Building Custom Platforms for Intel FPGA SDK for OpenCL: BSP Basics	English only
High-Level Synthesis	Introduction to High-Level Synthesis (Part 1 of 7)	English and Japanese
	HLS Interfaces (Part 2 of 7)	English only
	HLS Loop Optimizations (Part 3 of 7)	English only
	HLS Data Types (Part 4 of 7)	English only
	HLS Local Memory Optimizations (Part 5 of 7)	English only
	HLS Performance Optimization (Part 6 of 7)	English only
	HLS Optimization Example: Matrix Decomposition (Part 7 of 7)	English only
	HLS Coding Optimizations for Intel Stratix 10 Devices	English only
Design Languages	VHDL Basics	English, Chinese, and Japanese
	Verilog HDL Basics	English, Chinese, and Japanese
	SystemVerilog with the Intel Quartus Software	English, Chinese, and Japanese
	Best HDL Design Practices for Timing Closure	English only

FREE ONLINE TRAINING COURSES (COURSES ARE APPROXIMATELY ONE HOUR LONG)

COURSE CATEGORY	COURSE TITLES	LANGUAGES
Software Overview and Design Entry	Using the Intel Quartus Prime Standard Edition Software: An Introduction	English only
	The Intel Quartus Prime Software: Foundation (Pro Edition)	English only
	The Intel Quartus Prime Software: Foundation (Standard Edition)	English only
	Using the Intel Quartus Prime Pro Edition Synthesis Engine	English only
	Incremental Optimization with the Intel Quartus Prime Pro Edition Software	English and Japanese
	Introduction to Incremental Compilation in the Intel Quartus Prime Standard Edition Software	English, Chinese, and Japanese
	Incremental Block-Based Compilation in the Intel Quartus Prime Pro Software: Design Partitioning	English only
	Incremental Block-Based Compilation in the Intel Quartus Prime Pro Software: Introduction	English only
	Incremental Block-Based Compilation in the Intel Quartus Prime Pro Software: Timing Closure & Tips	English and Japanese
	Design Block Reuse in the Intel Quartus Prime Pro Software	English only
	Fast & Easy I/O System Design with Interface Planner	English only
	SERDES Channel Simulation with IBIS-AMI Models	English and Japanese
	Partial Reconfiguration for Intel FPGA Devices: Introduction & Project Assignments	English only
	Partial Reconfiguration for Intel FPGA Devices: Design Guidelines & Host Requirements	English only
	Partial Reconfiguration for Intel FPGA Devices: PR Host IP & Implementations	English only
	Partial Reconfiguration for Intel FPGA Devices: Output Files & Demonstration	English only
Verification and Debugging	Signal Tap Logic Analyzer: Introduction & Getting Started	English only
	SignalTap II Logic Analyzer: Triggering Options, Compilation, & Device Programming	English only
	SignalTap II Logic Analyzer: Data Acquisition & Additional Features	English only
	SignalTap Logic Analyzer: Basic Configuration & Trigger Conditions	English only
	Using Intel Quartus Prime Pro Software: Chip Planner	English and Japanese
	System Console	English only
	Debugging JTAG Chain Integrity	English only
	Power Analysis & Optimization for Intel Arria 10 & Stratix 10 Devices: Intro & Early Power Estimator	English only
	Power Analysis & Optimization for Intel Arria 10 & Stratix 10 Devices: Power Analyzer	English only
	Power Analysis & Optimization for Intel Arria 10 & Stratix 10 Devices: Optimization	English only
	Power Analysis & Optimization for Intel Arria 10 & Stratix 10 Devices: SmartVoltage ID	English only
	Power Analysis	English only
	Power Optimization	English only
	The Power & Thermal Calculator for Intel Agilex Devices	English only
Timing Analysis and Closure	Timing Analyzer: Introduction to Timing Analysis	English, Chinese, and Japanese
	Timing Analyzer: Required SDC Constraints	English and Chinese
	Timing Analyzer: Intel Quartus Prime Integration & Reporting	English and Chinese
	Timing Analyzer: Timing Analyzer GUI	English and Chinese
	Using Design Space Explorer	English and Japanese
	Timing Closure Using TimeQuest Custom Reporting	English only
	Design Evaluation for Timing Closure	English and Chinese
	Good High-Speed Design Practices	English only
	Clock Domain Crossing Considerations	English only
	Constraining Source Synchronous Interfaces	English and Chinese
	Constraining Double Data Rate Source Synchronous Interfaces	English, Chinese, and Japanese
	Stratix 10 Hyperflex FPGA Architecture Overview	English, Chinese, and Japanese
	Intel Quartus Prime Software Hyper-Aware Design Flow	English and Japanese
	Intel Agilex FPGAs Fabric Improvements	English and Japanese
	Intel Hyperflex Architecture Overview for Intel Agilex Devices	English and Japanese

FREE ONLINE TRAINING COURSES (COURSES ARE APPROXIMATELY ONE HOUR LONG)

COURSE CATEGORY	COURSE TITLES	LANGUAGES
Timing Analysis and Closure (Continued)	Using Fast Forward Compile for the Intel Hyperflex FPGA Architecture	English, Chinese, and Japanese
	Introduction to Hyper-Retiming	English, Chinese, and Japanese
	Eliminating Barriers to Hyper-Retiming	English, Chinese, and Japanese
	Introduction to Hyper-Pipelining	English and Japanese
	Introduction to Hyper-Optimization	English, Chinese, and Japanese
	Intel Hyperflex FPGA Architecture Design: Analyzing Critical Chains	English only
	Intel Stratix 10 FPGA Optimization: Loop Analysis and Solutions	English only
	Hyper-Optimization Techniques 2: Pre-Computation	English only
	Hyper-Optimization Techniques 3: Shannon's Decomposition	English only
	Creating High-Performance Designs in Intel Stratix 10 FPGAs	English only
	Creating High-Performance Designs in 20 nm Intel FPGAs	English, Chinese, and Japanese
Memory Interfaces	Introduction to Memory Interfaces in Intel Agilex Devices	English and Japanese
	Integration of Memory Interfaces in Intel Agilex Devices	English only
	Using High Performance Memory Interfaces in Altera 28 nm and 40 nm FPGAs	English and Chinese
	Introduction to Hybrid Memory Cubes with Altera FPGAs	English only
	Implementing the Hybrid Memory Cube Controller IP in an Altera FPGA	English only
	High Bandwidth Memory (HBM2) Interfaces in Intel Stratix 10 MX Devices: Introduction, Architecture	English only
	High Bandwidth Memory (HBM2) Interfaces in Intel Stratix 10 MX Devices: HBMC Features	English only
	High Bandwidth Memory (HBM2) Interfaces in Intel Stratix 10 MX Devices: Implementation	English only
	Introduction to Memory Interfaces IP in Intel FPGA Devices	English, Chinese, and Japanese
	Integrating Memory Interfaces IP in Intel FPGA Devices	English, Chinese, and Japanese
	On-Chip Debugging of Memory Interfaces IP in Intel FPGA Devices	English, Chinese, and Japanese
	Verifying Memory Interfaces IP in Intel FPGA Devices	English, Chinese, and Japanese
	Low-Density Parity-Check (LDPC) Codes Intel FPGA IP for 5G Systems	English only
Connectivity Design	Configuring the Intel FPGA E-Tile Hard IP for Ethernet	English and Japanese
	Intel FPGA E-Tile Transceiver Basics	English and Japanese
	Intel Stratix 10 FPGA L- and H-Tile Transceiver Basics	English, Chinese, and Japanese
	Intel FPGA E-Tile Clocking	English only
	Transceiver Basics for 20 nm and 28 nm Devices	English, Chinese and Japanese
	Transceiver Toolkit for 28-nm Devices	English and Chinese
	Transceiver Toolkit for Intel Stratix 10 Devices	English only
	Transceiver Toolkit for Intel Arria 10 and Cyclone 10 GX Devices	English only
	Generation 10 Transceiver Clocking	English only
	Building a Generation 10 Transceiver PHY Layer	English only
	Building an Intel Stratix 10 FPGA Transceiver PHY Layer	English only
	Advanced Signal Conditioning for Stratix IV and Stratix V Receivers	English only
	Advanced Signal Conditioning for Arria 10 FPGA Transceivers	English only
	Introduction to the Arria 10 Hard IP for PCI Express	English only
	Customizing Intel Stratix 10, Intel Arria 10 & Intel Cyclone 10 GX FPGA Hard IP for PCI Express	English only
	Connecting to the Arria 10 Hard IP for PCI Express	English only
	Designing with Intel Stratix 10, Intel Arria 10 & Intel Cyclone 10 GX Hard IP for PCI Express	English only
	Introduction to the 28 nm Hard IP for PCI Express	English only
	Customizing the 28 nm Hard IP for PCI Express	English only
	Connecting to the 28 nm Hard IP for PCI Express	English only
	Designing with the 28 nm Hard IP for PCI Express	English only
	JESD204B MegaCore IP Overview	English only
	Introduction to the Triple-Speed Ethernet MegaCore Function	English and Chinese
	Implementing the Triple-Speed Ethernet MegaCore Function	English only
	Introduction to the 10Gb Ethernet PHY Intel FPGA IP Cores	English only
	Introduction to the Low Latency 10Gb Ethernet MAC Intel FPGA IP Core	English only
	Using the 10Gb Ethernet Design Examples	English only

FREE ONLINE TRAINING COURSES (COURSES ARE APPROXIMATELY ONE HOUR LONG)

COURSE CATEGORY	COURSE TITLES	LANGUAGES
System Design	Introduction to Platform Designer	English, Chinese, and Japanese
	Creating a System Design with Platform Designer: Getting Started	English, Chinese, and Japanese
	Creating a System Design with Platform Designer: Finish the System	English and Chinese
	Platform Designer in the Intel Quartus Prime Pro Edition Software	English only
	Advanced System Design Using Platform Designer: Component & System Simulation	English only
	Advanced System Design Using Platform Designer: System Optimization	English only
	Advanced System Design Using Platform Designer: System Verification with System Console	English only
	Advanced System Design Using Platform Designer: Utilizing Hierarchy	English only
	Custom IP Development Using Avalon and Arm AMBA AXI Interfaces	English and Chinese
	DSP Builder Advanced Blockset: Getting Started	English only
	DSP Builder Advanced Blockset: Interfaces and IP Libraries	English only
	DSP Builder Advanced Blockset: Using Primitives	English only
	Variable-Precision DSP Blocks in Altera 20 nm FPGAs	English only
	High-Performance Floating-Point Processing with FPGAs	English only
	Building Video Systems	English and Chinese
	Creating Reusable Design Blocks: Introduction to IP Reuse with the Intel Quartus Prime Software	English and Japanese
	Creating Reusable Design Blocks: IP Design & Implementation with the Intel Quartus Prime Software	English and Japanese
	Creating Reusable Design Blocks: IP Integration with the Intel Quartus Prime Software	English and Japanese
	Avalon Verification Suite	English and Chinese
	Low-Density Parity-Check (LDPC) Codes Intel FPGA IP for 5G Systems	English only
Embedded System Design	Intel Stratix 10 SoC FPGA Technical Overview	English only
	Hardware Design Flow for an Arm-based Intel SoC FPGA	English, Chinese, and Japanese
	Software Design Flow for an Arm-based Intel SoC FPGA	English, Chinese, and Japanese
	Initial Design Review for Arria 10 SoC FPGA Designs	English only
	Getting Started with Linux for Altera SoCs	English and Japanese
	SoC Hardware Overview: Flash Controllers and Interface Protocols	English and Chinese
	SoC Hardware Overview: Interconnect and Memory	English and Chinese
	SoC Hardware Overview: System Management, Debug, and General Purpose Peripherals	English and Chinese
	SoC Hardware Overview: the Microprocessor Unit	English, Chinese and Japanese
	Profiling Intel SoC FPGAs with Arm Streamline	English only
	Creating Second Stage Bootloader for Altera SoCs	English only
	Secure Boot with Arria 10 SoC FPGAs	English only
	The Nios II Processor: Booting	English only
	Designing with the Nios II Processor and Qsys - Day 1	Japanese only
	The Nios II Processor: Introduction to Developing Software	English and Japanese
	Developing Software for the Nios II Processor: Tools Overview	Chinese only
	Developing Software for the Nios II Processor: Design Flow	Chinese only
	Using the Nios II Processor	Chinese only
	Using the Nios II Processor: Custom Components and Instructions	English only
	Using the Nios II Processor: Hardware Development	English only
	Using the Nios II Processor: Software Development	English only
	Developing Software for the Nios II Processor: Nios II Software Build Tools for Eclipse	Japanese only
	The Nios II Processor: Hardware Abstraction Layer	English, Chinese, and Japanese

FREE ONLINE TRAINING COURSES (COURSES ARE APPROXIMATELY ONE HOUR LONG)

COURSE CATEGORY	COURSE TITLES	LANGUAGES
Device-Specific Training	Introduction to Configuring Intel FPGAs	English and Chinese
	Configuration Schemes for Intel FPGAs	English and Chinese
	Configuration for Stratix 10 Devices	English, Chinese, and Japanese
	Integrating an Analog to Digital Converter in Intel MAX 10 Devices	English only
	Introduction to Analog to Digital Conversion in Intel MAX 10 Devices	English only
	Using the ADC Toolkit in Intel MAX 10 Devices	English only
	Using the MAX 10 User Flash Memory	English only
	Using the MAX 10 User Flash Memory with the Nios II Processor	English only
	Using the Generic Serial Flash Interface	English only
	Reducing Compile Time with Fast Preservation	English only
	Remote System Upgrade in Intel MAX 10 Devices	English, Chinese, and Japanese
	Remote System Upgrade in MAX 10 Devices: Design Flow & Demonstration	Chinese and Japanese
	Mitigating Single Event Upsets in Intel Arria 10 and Intel Cyclone 10 GX Devices	English and Japanese
	SEU Mitigation in Arria 10 Devices: Hierarchy Tagging	English only
	SEU Mitigation in Intel FPGA Devices: Fault Injection	English only
	Thermal Management in Intel Stratix 10 Devices	English and Chinese
Scripting	Command-Line Scripting	English only
	Introduction to Tcl	English and Chinese
	Intel Quartus Prime Software Tcl Scripting	English, Chinese, and Japanese

† Tests measure performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase. For more complete information about performance and benchmark results, visit www.intel.com/benchmarks.
