## Cannon Rack and Panel

ITT Electronic Components is a division of the multi-national ITT Corporation a \$7.5 billion dollar global enterprise. Our connector portfolio remains the most extensive in the industry offering the most reliable and cost effective range of interconnect solutions. These innovations have enabled ITT to provide products and technologies to such markets as:

- Aerospace
- Computers Systems
- Defense Electronics
- Geophysical
- Industrial Automation
- Medical Electronics

When you specify a Cannon Rack and Panel connector, you can rely on a product designed, developed, and manufactured to the highest quality and reliability standards in the industry. This tradition of excellence is based on ITT's corporate culture of operating its entire business under the principles of Six Sigma. At ITT, Six Sigma is not just a quality philosophy but a complete corporate culture that drives the entire business. Our Value Based Management and Value Based Product Development systems are two cornerstones of ITT that allows for the development of both leadership and product development principles, ensuring that the correct industry leading products are developed to the accepted market driven lead times. These principles have allowed ITT to become the market leader in all of our business portfolios.

### Six Sigma Manufacturing

ITT operates manufacturing facilities in the United States, France, Germany, Italy, Mexico, China, and the UK, all of which have particular product area strengths allowing ITT to offer a truly global footprint to our customers. Our facilities are world class and accommodate full vertical integration with the latest manufacturing technologies including: automated and robotic machining centers, Super Market manufacturing cells, Kanban pull systems, and automated electrical, mechanical, and optical test and inspection equipment. The combination of our manufacturing strength and our advanced manufacturing facilities allows ITT to offer

products at market driven prices. Our capabilities, especially in robotics, computerized precision tooling, Kaizen Project Management, Six Sigma tools, and test labs, gives ITT the most optimized global manufacturing footprint in the interconnect industry.

### The Custom Difference

As the industry leader in harsh environment interconnect applications, ITT's world class engineering teams will work directly with our customers to design and develop cost effective solutions for their applications. In many cases we may modify one of our standard designs to ensure a highly reliable solution where timing is critical. Yet, in those cases where a complete custom interconnect solution is required, ITT will work with our customer's Engineers to design an interconnect solution which will be cost effective yet highly reliable. As professional consultants, our Engineering teams will provide a thorough systems and mechanical analysis of any proposed solution. These analyses provide our customers with sophisticated electrical signal and mechanical characterizations to determine the best solution for their application.

### RoHS Compliance Information

ITT has implemented a strict parts control plan for all ITT electronics plants worldwide that allows the Rack and Panel connector product portfolio to meet the requirements of European Union Directive 2002/95/EC better known as the Reduction of Hazardous Substances initiative. To make things easier for our customers, Rack and Panel products can be ordered with an R prefix number which insures our customers will receive RoHS compliant parts for their commercial electronics applications and equipment. Since most RoHS hazardous substances center around specific metal plating and lead solder coatings, ITT's products for RoHS compliance are available in the following plating finishes: electroless nickel, stainless steel, Anodize over aluminum and Gold plating. It should be noted that gold plating would be recommended as the replacement for tin-lead solder when ordering board mount connectors.

BKAD/E/F

- Low insertion force contacts.
- Both environmental and non- environmental versions.
- Polarizing posts that are removable from the mating face.
- Field replaceable inserts for size 22 and power contacts.
- Up to 800 size 22 contacts in one connector.
- Crimp, coax, power, printed circuit and wire wrappable post style contacts.
- Uses standard DPX crimp, insertion/extraction tooling.
- Waveguide connections available.

**BKAD/E**

Rear Release/Rear Removable  
Size 12, 16, 20, 22 Crimp Contacts

BKAD/E connectors represent the standard for new avionic systems developed to support the air transportation market. Several important design concerns have been addressed and solved in this new series. High mating forces of pluggable modules in a rack have been reduced by approximately two-thirds.

The low insertion force contacts are also interchangeable with the contacts used in the DPX series and permit retrofit of existing equipment.

**BKAF**

Front Release/Front Removable  
Size 22 Solder Tail and Wrap Post Contacts

This new connector is totally intermateable and intermountable with ARINC 600 connectors now in the field.

The BKAF permits the user to easily replace a contact in case of problems, rather than disassemble the entire connector—it is available with size 22 contacts in wrap post or solder-tail versions. The system maintains the advantages of low insertion force technology incorporated in all ARINC 600 connectors.

**Pos-Aline Connector Construction Feature**

In the ARINC 600 connector series, Size 22 contacts are the only size that utilize this design feature. The hooded socket extends from its insulator while the pin contacts are shrouded by its front insulator. All other contacts used in this series employ standard contact design.

The result is that the complement of contacts for the plug connectors will consist of pin contacts for size 22 and socket contacts for all others. The receptacle contacts will be just the reverse, socket contact for size 22 and pin contacts for the balance.

How to Order

\* = For Polarizing Position greater than 99, add third digit.

**CONNECTOR SERIES**

BKA (Per ARINC 600)

**RoHS version**

R - RoHS compatible

**CLASS**

- D - Non-environmental (rear release, crimp contacts)
- E - Environmental (rear release, crimp contacts)
- F - Non-environmental (front release, solder and wrap post #22 contact, rear release all others)
- C - Same as E, except uses BKAD shells and Less 0 rings on plug side.
- T - Non-environmental connector using filtered contacts

**SHELL SIZE**

- 1 - Max. contact capacity - 125
- 2 - Max. contact capacity - 400
- 3 - Max. contact capacity - 800

**CONNECTOR LAYOUT DESCRIPTION**

(See page 8)

**SIZE 1 COAX INSERT MODIFIER**

M - Connector contains modified 71W1 or 2W2 insert (four MTG screw hole locations and coaxial contact used in this insert are interchangeable between different manufacturers)

**SHELL STYLE**

- 3 - Plug (rack side)
- 4 - Receptacle (box side)

**CONNECTOR MOUNTING MODIFIER**

- 00 - Standard design, .148 dia. holes
- 01 - With #6-32 ESNA (#12 NCFMA2-62) clinch nuts (see chart)

Connector Size	Number of Clinch Nuts	
	Plug	Receptacle
1	4	4
2	4	6
3	8	10

- 02 - Size 1 receptacle only - less 3 printed circuit board mounting lugs
- 03 - With #4-40 ESNA (#22 NCFMA2-40) clinch nuts (see chart)
- 08 - Size 2 and 3 plug and receptacle only - with #4-40 ESNA (#22 NCFMA2-40) clinch nuts (all mounting holes)
- 09 - Size 2 and 3 plug and receptacle only - with #6-32 ESNA (#12 NCFMA2-62) clinch nuts (all mounting holes)
- 22 - Same as - 00 mounting modification except with nickel finished shells .0008 - .0012 thick with EMI grounding spring for plug shells and supplied with non-environmental inserts.
- 23 - With floating eyelets (.048 min. radial float) 4 corner holes per connector.

NOTE: A dash must be inserted whenever code does not apply.

Consult Customer Service if other modifications are required

How to Order (continued)

**CONNECTOR LAYOUT DESCRIPTION** Note: All layouts with "OPEN" insert cavity are not supplied with an insulator. If a Blank insert is required please consult factory.

Customer Use Drawings:

Coax contacts 349-1051-002 and 349-1044-000 are located on customer use drawing #349-0000-304  
 Coax contacts 349-1042-000 is located on customer use drawing #320-1042-000

Dimensions shown in inch (mm)  
 Specifications and dimensions subject to change

Sizes 1 Coax Contacts (71W1 layout only)

Same standard coax contacts as used in ITT's DPX (ARINC 404) connector series.

Cavity Reducer

Pin  
P/N 021-8756-000

Socket  
P/N 021-8757-000

#5 Coax to #12 Contact

Cavity reducers are available when additional circuits are required for size 12 power contacts. These reducers, having the internal configuration of size 12 power contact, are inserted into the size 5 coaxial insulator cavity to create size 12 power contact cavity.

(Non removable)

Dust Caps

Conductive dust caps protect against static electricity.

ARINC 600 Connector Engaging Sequence

- NOTES:**
- 1. Varies; See Mil-Spec. (#5 Coax)
  - 2. Size 1 only.
  - 3. Flush head screws are not permitted for connector mounting as they would position connector incorrectly.
  - 4. Dimension 7 was calculated to provide clearance for
    - MCU backplate mat'l thickness of 2.5 mm (.10 in).
    - Rack backplate mat'l thickness of 2.5 mm (.10 in).
    - Connector mounting pan head screws, MCU 2.0 mm (.08 in).
    - Tolerance allowance - 3.2 mm (.13 in.) rack 2.0 mm (.08 in.)
    - Total - 12.2 (.50 in) (minimum).

Mating Sequence	Flange Position With:	Flange Spacing in. (mm)
1	No Engagement	1.245 (31.62) Nom.
2	Shells Initially Engaged	1.110 (28.19) 1.073 (27.25)
3	Polarizing Pins Entering Keys	1.073 (27.25) 1.023 (25.88)
	Contacts Entering Mating Insulator	
	#22	.800 (22.32) .748 (18.99)
4	#20	.805 (20.44) .741 (18.82)
	#16	1.012 (25.70) .949 (24.10)
	#12	1.008 (23.60) .953 (24.20)
	Miniature Coax	1
	Contacts Electrically Engaged	
	#22	.642 (16.30) .547 (13.89)
5	#20	.649 (16.48) .553 (14.04)

	#12	.772 (19.60) .692 (17.57)
	Miniature Coax	1
6	"0" Ring Engagement (BKAE Only)	.618 (15.70) .578 (14.68)
7	Shells Fully Mated	.522 (13.26) .488 (12.40)

# ARINC 600

# SGA

- Available Rear Release/Rear Removable Front Release/Front Removable
- Low Insertion force contacts.
- Both environmental and non-environmental versions.
- Polarizing post that are removable from the mating face.
- Field replaceable inserts.
- Up to 150 Size #22 contacts per connector.
- Crimp, coax, twinax, printed circuit and wire wrappable post style contacts.
- Uses standard ARINC 600, crimp, insertion/ extraction tooling.

SGA connectors utilize all the Signal cavity inserts and contacts from the ARINC 600 connector series. It was designed to be used where there are space constraints in which a standard ARINC 600 connector can not be used. ITT's SGA connector fills the need for a 150 maximum contact connector with a smaller shell design than Shell Size 2 of ARINC 600, and has more contacts available than single gang DPX with 106 Size 22 contacts.

## Materials and Finishes

	SGA*D	SGA*E	SGA*F	Specifications	
Shell	Material	Aluminum alloy	Aluminum alloy	Aluminum alloy	QQ-A-591/A380

Contacts	Finish	Gold	Gold	Gold	MIL-G-45204
	Termination	Crimp	Crimp	P.C/Wrap Post	N/A
Grommets/Seals	Material	N/A	Silicone-based Elastomer	N/A	N/A
O-Ring	Material	N/A	Silicone-based Elastomer	N/A	N/A

## How to Order (Refer to ARINC 600 [BKA] pages 12-14 for contact information.)

### CONNECTOR SERIES

SGA (Single Gang ARINC 600)

### SHELL STYLE

- 3 - Plug (Rack Side)
- 4 - Receptacle (Box Side)

### RoHS version

R - RoHS compatible

### CLASS

- C - Non-environmental with Grommet only, insulators are not potted into the connector shell.
- D - Non-environmental (rear release crimp contacts).
- E - Environmentally sealed (rear release crimp contacts).
- F - Non-environmental (front release, printed circuit or wire wrap posts).
- R - EMI/RFI Protected & Environmentally sealed, 0-ring omitted (plug only). (Reference ITTC Phoenix)

### CONTACT ARRANGEMENT

(See ARINC 600 (BKA) contact arrangements, pages 12-14)

### CONTACT TYPE

- P - Pin Contacts
- S - Socket Contacts

### CONNECTOR MOUNTING MODIFIER

- Mounting modifiers 00, 03, 06, 14, 15, hole location is .705 basic from connector vertical centerline.
- 00 - .151 Dia. Mounting holes.
  - 03 - .156 with #4-40 Self-Locking Clinch Nuts (ESNA #22NCFMA2-40) 4 per connector.
  - 06 - .188 Dia. For #6-32 Clinch nuts (ESNA #12NCFMA2-62) 4 per connector.
  - 14 - .137 Dia, Countersunk 82° x .230 Dia., Engaging face of mounting flange.
  - 15 - .137 Dia, Countersunk 82° x .230 Dia., Engaging face of mounting flange. Supplied with slant shield grounding spring.

Mounting modifiers 05, 07, 08, 09, 10, 11, 12, 13, hole location is .650 basic from connector vertical centerline.

- 05 - .208 Dia. for Floating Eyelet
- 07 - .212/.204 Slot 4 places.
- 08 - .120 Dia. Countersunk 82° x .230 Dia., Engaging face of mounting flange.
- 09 - .120 Dia. Countersunk 82° x .230 Dia., Rear face of mounting flange.
- 10 - .120 Dia. Countersunk 100° x .230 Dia., Engaging face of mounting flange.
- 11 - .120 Dia. Countersunk 100° x .230 Dia., Rear face of mounting flange.
- 14 - .137 Dia. Countersunk 82° x .230 Dia., Engaging face of mounting flange.
- 13 - .137 Dia. Countersunk 82° x .230 Dia., Rear face of mounting flange.

### POLARIZING POSITION

- 01 - 36 Positions. (See Chart page 28)  
When the last two digits are omitted, the polarizing posts will not be assembled and position number is not stamped on the connector. This allows the user to position the post and stamp the appropriate number on the shell. If the last two digits are "00", polarizing posts are not supplied with the connector.

### CONTACT MODIFIER

Refer to page 17 for replacement contact part numbers and required termination tooling information. (Blank) - With standard Crimp type Rear release contacts.

- F0 - Contacts are not supplied with connector (FO not stamped on connector.)
- SA - Front release .025 Dia. x .150 Solder Post Size 22 Sockets
- SB - Front release .025 Dia. x .250 Solder Post Size 22 Sockets
- SC - Front release .025 Dia. x .375 Solder Post Size 22 Sockets
- SD - Front release .025 Dia. x .500 Solder Post Size 22 Sockets
- WA - Front release .025 Sq. x .250 (1 Wrap)
- WB - Front release .025 Sq. x .375 (2 Wrap)
- WC - Front release .025 Sq. x .500 (3 Wrap)
- WD - Front release .025 Sq. x .641 (3 Wrap)

# MIL-C-81659

DPXNA (non-environmental, Type IV) and DPXNE (environmental, Types II and III) rack and panel connectors are designed to meet or exceed the requirements of MIL-C-81659, Revision B. They are used in military and aerospace applications and computer periphery equipment requirements, and are designed to operate in temperatures ranging from - 65°C to + 125°C. DPXNA/NE connectors are available in single, 2, 3, and 4 gang configurations

# DPXNA/DPXNE

with a total of 12 contact arrangements accommodation contact sizes 12, 16, 20 and 22, and combination standard and coaxial contacts. Contact retention of these crimp snap-in contacts is provided by the LITTLE CAESAR® rear release contact retention assembly. Environmental sealing is accomplished by wire sealing grommets and interfacial seals.

## Performance and Material Specifications

### MATERIALS AND FINISHES

Description	Material	Finish
Shell	Aluminum alloy	Cadmium plating, Type II, Class 3/QQ-P-416 with yellow chromate finish (underplating may be used)
Insulators	Thermoplastic or thermosetting plastic	None
Elastomers	Silicone rubber (ITT Cannon Blend)	None
Contacts	Copper alloy	Gold plate per MIL-G-45204, Type 1, Grade C, Class 1 with suitable underplating (silver not used)
Insulator Retaining Plate	Aluminum alloy	Anodize, blue color
Junction Shells (Not available for four gang)	Aluminum alloy	Same as shell
Clinch Nuts	Stainless steel	Cadmium Plating
Float Mounts	Stainless Steel	None
Polarizing Posts	Zinc (die cast )	Cadmium plating
Polarizing Keys & Retaining Plate	Nickel Silver	None
Screws	Brass	Cadmium plating
Lockwashers	Phosphor Bronze	Cadmium plating

### ELECTRICAL

Contact size	Wire Size	Insulation O.D. Limits (Inch)	Test Current per Mil-C-39029	Max. Current for Tests (Amps) (Mil-C-39029)	Max. Potential Drop (Millivolts) at 25°C
		Max.			
12	12	.135 (3.43)	23.0	23.0	63
	14		17.0	17.0	60
	16		13.0	13.0	68
16	18	.103 (2.62)	-	-	-
	20		7.5	-	75
	22		7.5	7.5	83
20	22	.071 (1.80)	-	-	-
	24		3.0	3.0	68
	22		5.0	5.0	110
22	24	.054 (1.37)	-	-	-
	26		2.0	2.0	80

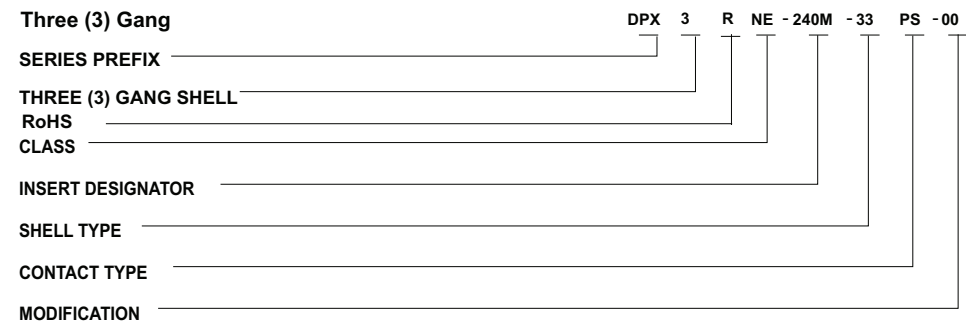

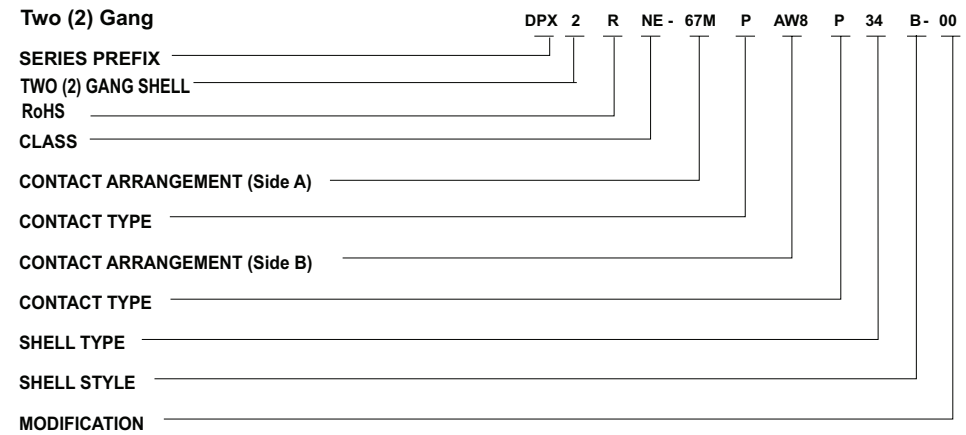

Note - The maximum contact resistance listed above is with silver plated wire.

Dimensions shown in inch (mm)  
Specifications and dimensions subject to change

www.ittcannon.com

How to Order

NOTE: On 3 & 4 gang assemblies, combination layouts, the contact type designator of the A106 layout. If applicable, precedes the 67 MS designator for standard contact sex layouts. See three (3) gang nomenclature breakdown above for 240M example (67MS A106P).

**SERIES PREFIX**

DPX - ITT Designation

**SHELL STYLE**

B - ARINC 'B' Shell

**RoHS version**

R - RoHS compatible

**CLASS (MIL-C-81659B, Class 1)....**

NA - Non - Environmental (MIL-C-81659B, Type IV)

NE - Environmental (Mil-C-81659B, Types II and III)

**INSERT DESIGNATOR**

In the 3 and 4 gang assemblies, the insert designation number represents cumulative (total) contacts. The charts on page 30 denote shell cavity location by layout. (If desired arrangement location is not defined, please consult or local sales engineering office.)

**CONTACT ARRANGEMENT**

See page 35

**SHELL TYPE**

'33' for Plug; '34' for Receptacle

**CONTACT TYPE**

'P' for Pin (Standard on '34' receptacle except A106 layout which has reversed contact sex)  
 'S' for Socket (Standard on '33' plug except A106 layout which has reversed contact sex)

**MODIFICATION CODES**

- 00 Standard
- 01 Standard with clinch nuts in the mounting holes.
- 02 Standard with tabs for attaching junction shells.
- 03 Standard with mounting holes .120 dia. countersunk 100° to .230 dia.
- 17 Combination of 01\*\* and 02\*\* (clinch nuts in mounting holes - 34 only and tabs for attaching junction shells).
- 22 Standard with clinch nuts (.33 only).
- 23 Standard with standard floating eyelets.
- 29 Standard except less grommet (NE, pin only).
- 30 Same as - 29\*\* except with tabs for attaching junction shells.
- 33 Same as - 29\*\* except with clinch nuts.
- 37 Same as - 29\*\* except with clinch nuts and tabs for attaching junction shells.
- 39 Standard with standard floating eyelets and tabs for attaching junction shells.

NOTE: For additional modification codes please consult Customer Service.

NOTES: † Coaxials without the seal accommodates both Seal 1 and Seal 2 cables.  
 †† Coaxials without the seal are utilized in DPX\*NE connectors supplied less the grommet (modification code: - 29\*\*) and DPX\*NA connectors.  
 ††† A152 modification code indicates .00005 (0.0010) gold plating on coaxial contacts. (Standard for the DPXNE/NA series.)  
 A176 modification code indicates .00002 (0.0005) gold plating on coaxial contacts.

Coaxial Contact Data

Installation Data

1. Use basic tool M22520/5-01 with Y-211 die (#995-0002-249) for crimping.
2. Use extraction tool No. CET-C8. An insertion tool is not required (See Note 5).
3. Center contact, rear insulator, crimp ring, support bushing (not applicable to RG58/RG142 coaxials), seal sleeve, front insulator, shell and ferrule are shipped unassembled in a common container.

4. Cable Assembly Instructions

- Step 1 - If applicable determine which portion of seal sleeve should be used. If Seal 2 is used, cut off Seal 1 portion.
- Step 2 - In sequence, place seal sleeve, support bushing and crimp ring over cable jacket.
- Step 3 - Trim cable per illustration.
- Step 4 - Comb out braid and flare out ends to permit entry of ferrule.
- Step 5 - Complete termination per illustration.

5. To extract coaxial, push back seal sleeve and support bushing. Slip cable into extraction tool

Push tool into insert until contacts coaxial retaining shoulder. Grip both cable and tool with one hand and pull coaxial rearward out of insert cavity.

6. To facilitate extraction of contacts, the length of free cable adjacent to the rear surface of the connector should not be less than 2.000 (50.80).

- A. Push ferrule under braid as far as it will go. Trim off braid extending beyond shoulder of ferrule, if necessary.
- B. While holding ferrule in place pull crimp sleeve forward over braid until it is tight against shoulder on ferrule. Pull firmly against face of ferrule to make sure it is up tight.
- C. Trim dielectric to the .035 (0.89)/.030 (0.76) dimension.

- A. Place front insulator over contact and then push assembly into coaxial shell.
- B. Place parts in jaw of crimp tool. Locate jaws at start of chamber on crimp sleeve. Press sleeve firmly into coaxial shell and crimp.
- C. After assembled coaxial is inserted into connector, push support bushing into grommet until shoulder rests on tubular extension. Then pull sealing sleeve forward until it is snug on grommet.

- A. Carefully push inner conductor through rear insulator.
- B. While holding rear insulator firmly against ferrule, trim conductor to .156 (3.96)/.146 (3.91) dimension.
- C. Place contact over conductor and solder.

Polarization Positions

MIL-C-81659B requires that polarizing post be shipped unassembled with the connector. The user then assembles the post in the preferred position and marks the position number on the connector. All DPXNA and DPXNE connectors shall be sold this way. The position number will not be marked.

Face View of Engaging End

The last two digits in the four-digit dash number refer to the polarizing post position. The polarizing posts will be shipped unassembled with the connector assembly. The position number is not stamped on the connector. This allows the customer to position the posts themselves and then stamp the appropriate number on the shell.

(See Customer Use Drawing for details)

## ARINC 404

## DPX

### DPXA - Single Shell DPX

DPXA connectors are one-piece shell miniature rack/panel connectors. The construction offers high strength and maximum utilization of insert area for contact arrangements accommodating up to 106 contacts. Shells are keystone-shaped for polarization. Operating temperature for the DPXA is -54.2°C to +125°C (-67°F to +257°F).

DPXA-34

DPXB-33

### DPXB - Polarized ARINC Shell

DPXB connectors are DPXA connectors with an ARINC B shell. Additional polarization is provided by three hexagonal polarizing posts.

### DPX2 - Two Gang DPX Series

DPX2 connectors are the original two-gang versions of the DPX, and are made of the same materials and accommodate the same contact arrangements. Keystone shaped shells accommodate two DPX inserts with up to 212 contacts. The DPX2 has three polarizing posts with 99 polarizing positions.

DPX2-34B

DPX2-33B

### DPX2 - A - ARINC A Shell

DPX2-A connectors are DPX2 connectors with an ARINC A shell. This shell type has the receptacle flange placed .344 (8.74) from the front of the engaging portion of the shell, and short aluminum alloy polarizing posts permit polarization before contacts engage.

### DPX2-B - ARINC B Shell

DPX2-B connectors supersede the DPX2-A and have an ARINC B Shell. This Shell type has the

receptacle flange placed .060 (1.52) from the front of the engaging portion of the shell, and polarizing posts permit polarization before the shells engage.

### DPX3 - Three Gang DPX Series

DPX3 connectors are three-gang versions of the DPX, made of the same materials, and accommodate the same contact arrangements. The three-gang version can therefore accommodate up to a total of 318 in the keystone shaped shells, with three polarizing posts that are capable of providing up to 99 polarizing positions.

DPX3-34

DPX4-33

### DPX4 - Four Gang DPX Series

DPX4 connectors are four gang versions of the DPX, made of the same materials, and can accommodate four separate arrangements that can total up to 424 contacts. The DPX4 has three polarizing posts with 99 polarizing positions.

### DPX\*MA - LITTLE CAESAR® Contact Assembly

DPX\*MA connectors are DPX connectors with the LITTLE CAESAR contact assembly for rear insertion, release, and extraction of crimp type contacts. Insertion requires no tool; extraction requires an expendable plastic tool. A hard dielectric, closed-entry socket insert has lead-in chamfers for positive mating of contacts. Contacts are crimpable with the M22501 tool.

### DPX\*ME - Environmental with LITTLE CAESAR® Contact Assembly

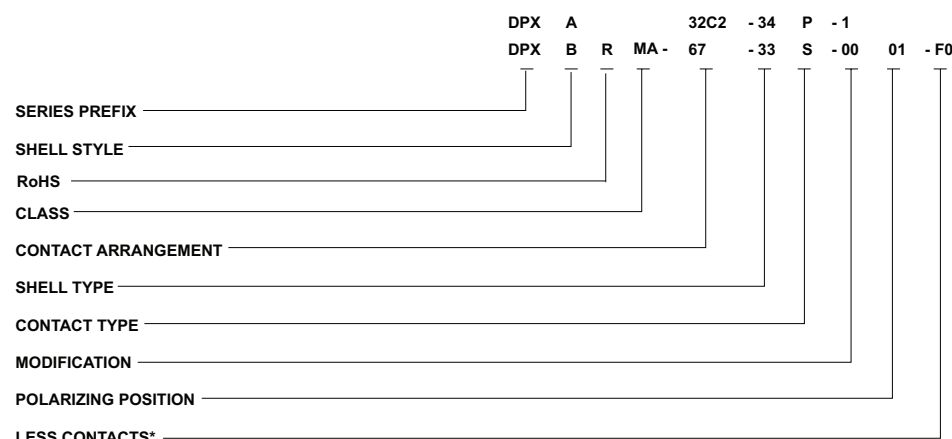

DPX\*ME connectors are DPXMA connectors with environmental interfacial and grommet seals, and olive drab shell finish.

\*\*Crimp rear release coaxial contacts.  
†A106 arrangements have the POS-ALINE connector design. See below.  
NOTE: Engaging force of each layout arrangement shall not exceed 45 lbs. maximum.

Positive Contact Alignment Design

For high density A106 contact arrangement

In the POS-ALIGN connector construction the entire pin contact is recessed in an individual cavity in the plug insulator while the sturdy socket members are exposed and extend from the connector receptacle face. There is a lead-in chamfer that guides the socket contact into the pin cavity assuring proper contact alignment during mating and protecting the pin contact from damage and wear.

Contact and Termination Tooling Data - Commercial

Crimp Contacts

The crimp contacts are shipped with the connector, not installed. Additional contacts may be ordered using the part numbers listed below. All tools must

be purchased separately. The insertion/extraction tools listed are plastic type. Consult factory for more durable metal tools.

Coaxial Cable Assembly

ITT Cannon recommends resistance soldering for all solder contacts, particularly for RF cable where excessive heat will damage the dielectric. Wires

should be pre-tinned. Bushing, endbells, and junction shells (where applicable) must be slipped over wire bundles before soldering is started. Consult

factory for types not shown. The mechanical steps in wiring coaxials described below.

**For Codes A, B, C, D, and E**

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Remove inner contact from coaxial assembly and solder it to inner conductor of cable.
3. Push inner contact back into coaxial assembly.
4. Pull outer conductor over coaxial shell, and solder.
5. Apply shrink sleeving after assembly.

**For Codes I and J**

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Comb braid, tin conductor and remove flux.
3. Remove solder pot cover. Insert cable and solder conductor to contact. The dielectric should butt against contact solder pot.
4. Replace solder pot cover and solder braid to ferrule.
5. Apply shrink sleeving after assembly.

**For Codes K**

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Unscrew cap and remove spacer and inner contact from coaxial assembly.
3. Push cable through center of cap and spacer.
4. Solder inner contact to inner conductor of cable.
5. Push inner contact back into coaxial shell assembly and attach cap.
6. Separate outer conductor of cables into two pigtailed 180° apart.
7. Attach on pigtail to each end of cap strip and solder.
8. Apply shrink sleeving after assembly.

**For Codes Z and AA**

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Solder inner conductor to coaxial contact through side slot in coaxial with outer sleeve pushed back on cable.
3. Pull sleeve forward over braid and solder through holes in sleeve.
4. Solder sleeve to coaxial body.

Coaxial Contacts

NOTES: 1. The "X" dimension is take from the rear of the shell.  
 2. Codes G and S are inactive for new design. Use codes AD and AE.  
 3. Code AA is designed for installations that have limited space in the terminal area. Use code AG for standard installations.

\*P for pin; S for socket.

DPX\*MA/ME Coaxial Contact Data (for environmental requirements)

Components/Accessories

NOTE: The A32W2 & A40W1 (Ring Type Retention); AW8 & A32W4 (LITTLE CAESAR Renention) Coaxial Contact arrangements have been redesigned to provide ease of insertion/removal of the coaxial contacts. Sealing is accomplished with the addition of sealing sleeves provided with the coaxial contact assembly.

RING TYPE RETENTION (A32W2 & A40W1 CONTACT ARRANGEMENTS)

A40W1 (ME Version)

Coaxial Contact Assembly Recommendations

(For Codes A, B, C, D, E, J, K, L and P)

- Center contact, rear insulator, crimp ring, support bushing and seal sleeve are packaged separately and shipped with the coaxial assembly.
- Use impact extraction tool no. CET-C4 (038869-0004). An insertion tool is not required. (See Item 4).
- Cable Assembly Instructions
  - Step 1- If applicable, determine which portion of seal sleeve should be used. If seal 2 is used, cut off seal 1 portion
  - Step 2 - In sequence, place seal sleeve, support bushing and crimp ring over cable jacket.
  - Step 3 - Trim cable per illustration.
  - Step 4 - Place rear insulator over dielectric.
  - Step 5 - Solder innerconductor to center contact.
  - Step 6 - Insert soldered cable firmly into coaxial with shielding over coaxial shell.
  - Step 7 - Pull crimp ring forward until stopped and crimped.
  - Step 8 - Insert coaxial assembly into connector until engaged. Push support bushing into grommet until shoulder rest on tubular extension. Then pull seal sleeve forward until it is snug against grommet.
- To extract coaxial, push back seal sleeve and support bushing. Then push out coaxial from engaging end with CET-C4 (038869-0004) impact tool.
- When crimping with CA58073 crimp tool, care should be taken to avoid flaring the front end of the crimp ring. Place Crimp jaw so that the second tooth of the indentors is over the end of the crimp ring.
- To facilitate extraction of contacts and avoid splaying the length of free cable adjacent to the rear surface of the connector should not be less then 2.000 (50.80).

WITHOUT SEAL

\*P for Pin, S for Socket  
 Unsealed accommodates both Seal 1 & Seal 2 cables.  
 For use with connector supplied less grommet (Code-29\*\*, etc.).

Coaxial Contact Assembly and Extraction Recommendations

- Use Crimp Tool No. DIE Y211 (995-0002-249), Tool M22520 / 5-01 (995-0001-761).
- Use extraction tool No. CET-C8. An insertion tool is not required. (See Note 5).
- Center contact, rear insulator, crimp ring, support bushing (not applicable to RG58/RG142 coaxials), seal sleeve, front insulator, shell and ferrule are shipped unassembled in a common container.
- Cable Assembly Instructions:  
 Step 1 - If applicable, determine which portion of seal sleeve should be used. If seal 2 is used, cut off seal 1 portion.  
 Step 2 - In sequence, place seal sleeve, support bushing and crimp ring over cable jacket.  
 Step 3 - Trim cable per illustration.  
 Step 4 - Comb out braid and flare out ends to permit entry of ferrule.  
 Step 5 - Complete termination per illustration. (See below)
- To extract: coaxial, push back seal sleeve and support bushing. Slip cable into extraction tool. Push tool into insert until it contacts coaxial retaining shoulder. Grip both cable and tool with one hand and pull coaxial rearward out of insert cavity.

WITHOUT SEAL

SEALED

- To facilitate extraction of contacts and avoid splaying, the length of free cable adjacent to the rear surface of the connector should not be less than 2.000 (50.80).

- Carefully push inner conductor through rear insulator.
- While holding rear insulator firmly against ferrule, trim conductor to .156 (3.96)/.146 (3.71) dimension.
- Place contact over conductor and solder.

- Push ferrule under braid as far as it will go. Trim off braid extending beyond shoulder of ferrule, if necessary.
- While holding ferrule in place pull crimp sleeve forward over braid until it is tight against shoulder of ferrule. Pull firmly against face of ferrule to make sure it is up tight.
- Trim dielectric to the .035 (0.89)/.030 (0.76) dimension.

- Place front insulator over contact and then push assembly into coaxial shell.
- Place parts in jaw of crimp tool. Locate jaws at start of chamfer on crimp sleeve. Press sleeve firmly into coaxial shell and crimp.
- After assembled coaxial is inserted into connector, push support bushing into grommet until shoulder rests on tubular extension. Then pull sealing sleeve forward until it is snug on grommet.

Coaxial Cable Assembly Recommendations

LITTLE CAESAR Contact Assembly Data

For Codes F, S and T

1. Strip and trim cable as shown on page 60.
2. Solder inner conductor to coaxial contact with crimp ring over braid and rear insulator over inner conductor.
3. Insert cable into coaxial with shell under braid. Crimp ring with Cannon crimp tool CA58073.

For Codes G, H and R

1. Strip and trim cable as shown on page 60.
2. Solder inner connector to coaxial contact with crimp ring pushed back on cable.
3. Insert cable into coaxial and pull ring forward over braid. Crimp ring with Cannon crimp tool CA58073-0001 or CCT-408M. After crimping, crimp ring must not exceed .252 (6.40) diameter.

For Codes U

1. Strip and trim cable as shown on page 60.
2. Slide crimp ring over braid and jacket of cable.
3. Unbraid exposed portion of braid and fold braid wires backward over outside of crimp ring.
4. Insert prepared wire into right angle fitting of shell assembly. Conductor should be aligned in slot of the center contact. Crimp with Cannon tool CCT/C10.
5. Solder center conductor of cable to contact. Insert cap and solder in place.

For Codes AA

1. Slip ferrule over cable jacket. Trim outer jacket. Comb out braid as shown. Retrim braid.
2. Bend up combed out braid at right angles to cable. Slide ferrule up to bend and fold braid back against ferrule.
3. Slide rear insulator over dielectric as shown. Press insulator firmly against folded back braid and trim dielectric flush with insulator. Then cut inner conductor to length shown.
4. Place contact over conductor. Press contact and insulator firmly against braid and solder contact to conductor.
5. Push cable assembly into shell, pressing against rear of ferrule and crimp area shown with T. & B. #WT-400 Crimp Tool while making sure parts do not move out of place.

For Codes AC

1. Trim jacket to .680 (17.27)/.660 (16.76) dimension. Then slide ferrule over braid until it stops against jacket, and comb out exposed portion of braid.
2. Fold combed braid over ferrule as shown. Then trim dielectric to .070 (1.78)/.060 (1.52) dimension and slide rear insulator over dielectric until it presses against braid.
3. Press insulator against braid and trim inner conductor to .247 (6.27)/.237 (6.02) dimension. Then place contact over conductor and crimp with MS3191-3 (do not use MS3191-1). Press parts firmly against locator during crimping operation.
4. Place front insulator over contact. Push parts into coaxial shell. While holding parts firmly against stop shoulder in coaxial shell, place jaw of crimp tool at back end of shell and crimp. Use Buchanan crimp tool #612991 (.343 [8.71] across hex).

Dimensions shown in inch (mm)  
Specifications and dimensions subject to change

www.ittcannon.com

Coaxial Cable Assembly Recommendations (Continued)

For Code V

1. Trim cable to dimensions shown below.
  - A. Push ferrule under braid as far as it will go and press braid down tightly around ferrule.
  - B. Solder ends of braid to ferrule by applying a small amount of solder. Avoid excess solder as it would cause braid to swell up.
  - C. Remove any solder exceeding the .349 (8.86) max. diameter.
  - D. Check the .075 (1.90) max. dielectric extension, retrim if necessary.
3. A. Place rear insulator over dielectric and conductor into contact.
  - B. Solder contact to conductor through access hole.
  - C. Remove excess solder from outside of contact.
4. A. Place front insulator over contact.
  - B. Push parts into coaxial shell.
  - C. While holding parts firmly against stop shoulder in coaxial shell, place jaw of crimp tool at back end of shell and crimp, use Buchanan crimp tool #612991 [.343 (8.71) across hex].

For Codes AB, AD, AE, AF and AG

Setp 1 - Trim cable as shown.

Step 2 - Flare out ends of braid to permit entry of ferrule.

Step 3 - Complete termination per instructions as shown below.

- a. Push ferrule under braid as far as it will go. Trim off braid extending beyond shoulder of ferrul, if necessary.
- b. While holding ferrule in place pull crimp sleeve forward over braid until it is tight against shoulder on ferrule. Push firmly against face of ferrule to make sure it is up tight.
- c. Trim dielectric to the .035 (0.89)/.030 (0.76) dimension.
- d. Carefully push inner conductor through rear insulator.
- e. While holding rear insulator firmly against ferrule, trim conductor to .156 (3.96)/.146 (3.71) dimension.
- f. Place contact over conductor and solder.
- g. Place front insulator over contact and then push assembly into coaxial shell.
- h. Place parts in jaw of crimp tool. Locate jaws at start of chamfer on crimp sleeve. Press Sleeve firmly into coaxial shell and crimp. Use Daniels crimp tool HX4-210.

50	2	2	5					50	6	3	3				

The last two digits in the DPX nomenclature (ex: DPXB-8-33B-0014) refer to the polarizing post position. When the last two digits are omitted it means the polarizing posts will not be assembled and position number is not stamped on the connector. This allows the customer to position the posts themselves and then stamp the appropriate number on the shell. If the last two digits are made 00 it means the polarizing posts are deleted.

# MIL-C-83733

# DPK

**HIGH-PERFORMANCE MIL-C-83733 QUALIFIED**  
**Temperature Ranges of - 65 C to +200 C**  
**Environment - Resistant**

The Cannon DPK series are high performance environment-resistant, rectangular connectors qualified to MIL-C-83733 (USAF). They feature crimp snap-in contacts in the dependable LITTLE CAESAR® rear release contact retention assembly. This field-proven assembly permits contacts to be inserted and extracted at the rear of the connector. Contacts are qualified to military specifications and are crimped with MIL-C-22520 crimp tools, using standard locators.

The versatile DPK Connector is suitable for many applications, particularly where environment or thermal protection is mandatory and high reliability is a design requirement.

These high performance connectors are available in two shell sizes with a variety of mounting configurations. There are 13 contact arrangements available accommodating from 18 to 185 standard contacts. The standard contacts are available in sizes 12, 16, 20 and 22D. Shells are a die-cast aluminum alloy with electroless nickel finish. Insulators are a high grade, glass reinforced, resin conforming to MIL-M-14 which meets or exceeds the requirements of MIL-C-83733. Silicone rubber is used for wire sealing grommets, interfacial and peripheral seals.

## How To Order

### MIL-C-83733 (USAF) Nomenclature

### RoHS version

R - RoHS compatible

### SHELL SIZE

A - Small shell  
 B - Large shell

### CONTACT MODIFICATION

G-MIL-C-38999 contacts. Size 22D for DPKA-131 and DPKB-185 contact arrangements only.  
 W-MIL-C-38999 type contacts. Size 22D wrap posts for DPKA-131 and DPKB-185 layouts. .025 (0.63) square posts for .340(8.64); extension from grommet face.

### CONTACT ARRANGEMENT

Shell Size A-18, 32, 51 and 131 (MIL-STD-1531).  
 Shell Size B-48, 64, 78, 101 59W7, 71, 71C15, 161 and 185 (MIL-STD-1532).

### CONTACT TYPE

P-Pin (Receptacle Connectors)  
 S-Socket (Plug Connectors)

### POLARIZATION

Six-position shell polarization accomplished with Polarizing pins mounted on each end of shell flange. Available on mounting style A only.

### MOUNTING STYLES

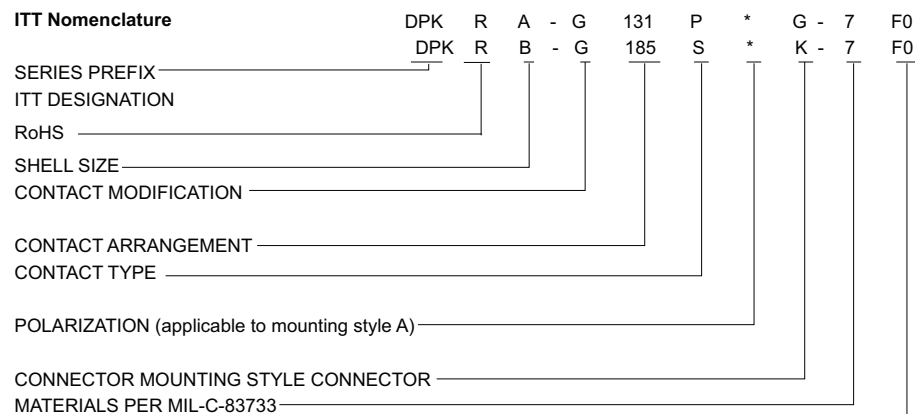

A - Two mounting holes .197(5.00) diameter (for either nuts or jackscrews ordered separately) and two polarizing posts. (Replaces Mounting Style B.)  
 C - Four MS24700-2 bushings, included for the receptacle (M83733/5).

F - Four (4) clinch nuts jNo. 6-32 thread M83733/6.

Dimensions shown in inch (mm)  
 Specifications and dimensions subject to change

www.ittcannon.com

### ITT Nomenclature

FURNISHED LESS CONTACTS (will not be stamped on connector).

- G - Four .281(7.14) diameter holes (for MS24700-2 bushings or 231-0019-000 spring mounts) (M83733/1).
- H - Two mounting hole flange. Two (231-0019-000) spring mounts on the plug and two MS24700-2 bushing mounts on the receptacle (M83733/10/12).
- K - Four captivated, non-rotating spring mounts on the plug (M83733/4).
- M - Two mounting hole flange. Two mounting holes .281(7.14) diameter (for MS24700-2 bushings or 231-0019-000 spring mounts) (M83733/9).

- X - Two guide pins with two (231-0019-000) spring mounts on the plug and two guide sockets with two .197(5.00) diameter holes on the receptacle (M83733/2; /3)
- Y - Two guide sockets with two (231-0019-000) spring mounts on the plug and two guide pins with .197(5.00) diameter holes on the receptacle (M83733/7; /8).
- Z - Two staggered clinch nuts on the receptacle (No. 6-32 thread) (M83733/11).

MATERIAL MODIFICATION  
 - 7 standard product line, environment resistant per MIL-C-83733(USAF). QPL M83733

Performance and Material Specifications

**MATERIALS**

Shell	Diecast aluminum alloy A-380 per QQ-A-591
Insulator	Thermosetting Plastic/Thermoplastic
Contacts	Copper alloy per QQ-C-533
Grommets and Seals	Silicone base elastomer
Mounting hardware	Stainless steel/Alloy steel

**FINISHES**

Shell	Electroless nickel plate per MIL-C-26074, Class 3
Contacts	Gold over suitable underplate per MIL-C-39029
Hardware	Passivate/Cadmium plate

**MECHANICAL FEATURES**

Shell Sizes	A (DPKA); B (DPKB)
Coupling	Friction, spring mount or jackscrew-coupling nut
Contact Arrangements	A-18,32,51,G131 B-48,64,78,101,59W7.71,71C15,161 G185
Contact Termination	Crimp

**ELECTRICAL**

Test Data

The following is a presentation of the certified capabilities of Cannon's DPK, high performance, rectangular, rack and panel series connectors with respect to critical qualification performance and design requirements of MIL-C-83733. The data presented herein is a condensation of authentic qualification test data extracted from the original qualification reports on file at the ITT Cannon Test Laboratory.

The successful completion of the conducted qualification program clearly demonstrates the compliance of ITT Cannon, DPK series connectors and contacts to meet or exceed the performance requirements of MIL-C-83733.

**Identification of Qualification Specimens**  
The DPK connectors listed below represent the description and identification of the test specimens

subjected to the qualification test sequence of MIL-C-83733.  
DPKA-G-131PC-7 (Receptacle) DPKB-G185PC-7 (Receptacle)  
DPKA-G131SK-7 (Plug) DPKA-G185SK-7 (Plug)  
DPKA-G-131PC-7 (Receptacle) DPKB-G185PC-7 (Receptacle)

Table I below, lists the conducted tests executed in accordance with the applicable test paragraphs of MIL-C-83733, with the Test Level, Parameter Limits and Measured Values listed in Table 11.

TABLE 1 TEST PERFORMED

Test Description	Test Description	Test Description	Test Description
Examination Of Product	Contact Separating Forces	Low Level Contact Resistance	Moisture Resistance
visual Examination	Connector Mating and Unmating Forces	Thermal Shock	Altitude Immersion
Sample Preparation	Contact Retention	Crimp Potential Drop	Insert Retention
Insulation Resistance - 25°C	Endurance	Vibration (Random)	Corrosion
Withstanding Voltage - Sea Level	Gold Plating Porosity	Physical Shock	Analyses
Withstanding Voltage - Altitude	Temperature Life	Ozone Exposure	Service and Storage Life
Contact Resistance	Insulation Resistance - 200°C	Fluid Immersion	Gases and Toxic or Corrosive Fumes

TABLE II

Test or Environment	Test Level or Special Requirements	Parameters Limits	Measured Values or Comments
Examination Of Product visual Examination Sample Preparation Insulation Resistance - 25°C Withstanding Voltage - Sea Level Withstanding Voltage - Altitude Contact Resistance	Assure compliance with: a) Applicable detail specifications and control drawings b) Materials c) Design and construction d) Dimensional e) Finish f) Product identification g) Workmanship	Compliance to applicable detail specification and control drawings.	Product submitted accompanied by Q.A. certificates of compliance. complied with the applicable acceptance requirements for qualification testing.
VISUAL EXAMINATION	Visual examination of qualification test specimens for completeness, workmanship, identification and/or other detrimental conditions.	Visual examination acceptance.	No visible detection of any condition detrimental to normal function.
SAMPLE PREPARATION	MIL-W-16878/4A, 28 AWG (min. dia.) and 22 AWG (max. dia.) wire. Daniels WA22A crimping tool. M22520/2-06 and M22520/2-09 contact positioner for resp.22D size socket and pin. MS7495A22M insertion and MS27495R22M removal tool.	Assemblies to conform with specified wiring and termination requirements.	Qualification test specimens prepared and terminated in accordance with specified wiring requirements. No difficulties encountered during wiring operation.
INSULATION RESISTANCE [25°C (77 F)]	Unmated condition. 50% of contact complement measured. Between adjacent contact pairs and each contact and connector shell.	5.1 Gigohms minimum at 500 Vdc. Electrification Time 120 secs. maximum.	Insul. res. range (ohms) (25°C) DPKA Adj. Cont. Cont./Shell 300G-1.0T 1.1T-1.8T DPKB 400G-1.6T 1.1T-20T (Ganged parallel test circuits)
DIELECTRIC WITHSTANDING VOLTAGE (SEA LEVEL)	Unmated condition. 50% of contact complement measured. Test voltage 1350 Vac/rms-60hz, applied between adjacent contact pairs and each contact and connector shell.	No electrical breakdown, flashover or excessive current leakage. Electrification 2 secs. minimum.	No evidence of breakdown or flashover Leakage ≤ 5mA. (Ganged Parallel test circuits)
SALT SPRAY (CORROSION)	Method 101, test condition B. (48 hours) un-mated. Salt solution 5% by weight. S.G. 1.026 to 1.040 at 22.8°C-23.9°C (73°F-75°F). Solution pH 6.5 to 7.2 and chamber temp 33.9°C to 36.1°C (93°F to 97°F).	Visual examination. No degradation of normal connector functions.	No detrimental corrosive attack on connector's surface finish or contacts.
CONTACT RESISTANCE [AT 25°C AND 200°C (77 F AND 392 F)]	Mated condition 20% of contact complement tested. Test circuit per Fig. 2 measured across points YY performed at 25°C and 200°C (77°F and 392°F).	Max. Voltage Drop (MV) Wire 25°C 200°C Size (77°F) (392°F) 28 8 19 22 14 25	MV-Drop Range. (25°C) Wire Size Adc Range Avg. 28 1.5 2.3-5.2 (mV) (mV) 22 5.0 6.3-10 8.2 (200°C) 28 1.5 9-17 11.8 22 5.0 16-21 17.8
CONTACT SEPARATING FORCES	100% of socket contact complement measured. Separating force measured on steel test pin .0294 ± .0001 (0.747 ± 0.002) dia. insertion depth .205 (5.21) min. from insert face.	Separating Force (ounce-force) Min. Max. 0.6 4.9	Separating force range (ounce-force) DPKA Sep. Force Avg. Force 1.3-4.1 2.4 DPKB 1.0-2.9
CONNECTOR MATING AND UNMATING FORCES	Mating dept. .390 (9.91) panel spacing. Total of 10 cycles mating and unmating. Forces measured on 10th cycle.	Axial mating and unmating forces 175 pounds-force maximum.	Mating/Unmating Force (pound-force) Mate Unmated DPKA 145 34 DPKB 150 72 Forces obtained on 10th cycle.
CONTACT RETENTION	Unmated. 50% of contacts measured. 10.0 lbf applied to contact engaging end. Zero reference at 2.0 lbf preload. Displacement measured under spec. load.	Max. contact displacement under 10.0 lbf load .011 (0.28) maximum.	Contact Displacement Range (inch) DPKA Avg. Pins 0.002-0.003 0.0027 Sockets 0.002-0.004 0.0031 DPKB Pins 0.002-0.004 0.0027 Sockets 0.002-0.003 0.0026
ENDURANCE (DURABILITY)	Mating dept. .450 (11.43) panel spacing. Total of 500 cycles mating and unmating at a rate of 300 cycles/hour maximum.	Withstand 500 cycles of durability conditioning without detrimental effects to function.	No detrimental damage. Connectors fully functional.

Test Data

(TABLE II Continued)

Test or Environment	Test Level or Special Requirements	Parameters Limits	Measured Values or Comments																																																																				
THERMAL SHOCK	Mated condition. Five continuous cycles of temperature change. 30 mins. exposure at each temp. extreme constitutes one cycle. Transfer time between chambers 2 mins. max. temp. extremes: - 54 ± 3° C and 200 ± 3° C (-77° + 5.4° F and 392 ± 5.4° F).	Withstand temperatre cycling. No damage.	No apparent damage.																																																																				
CRIMP POTENTIAL DROP	20% of the contacts in each connector measured. VIBRATION (RANDOM)	Method 214, Test condition II, Letter 'G'. Test level envelope per figure and table 214-2. Contact circuit series wired for current discontinuity monitoring. Eight hours duration in each of three mutually peipendicular axes. Connector mating depth .450 (11.43) panel spacing.	No current discontinuity ≥ 1.0 microsec. No cracking, breaking or loosening of connector parts.	Connectors met random vibration requirements. No electrical discontinuity detected.																																																																				
PHYSICAL SHOCK	Mated condition, .450 111.43) panel spacing. Shock pulse duration 11 ± 1 mS, waveshape terminal peak smooth, peak amplitude 20g. Contact circuit series wired for current discontinuity monitoring. One shock pulse in each of three mutually perp. axes.	No current discontinuity ≥ 1.0 microsec. No cracking, breaking or loosening of connector parts.	Connectors met physical shock requirements. No electrical discontinuity or damage detected.																																																																				
MOISTURE RESISTANCE	Method 106, (Step 7b) ommed) Mated condition. 10 days humidity and temperature cycling. At end Step 6 final cycle at 25° C (77° F) and 90-98% RH insulation resistance in asured 100% between each and all other contacts and the shell in parallel circuit.	Insulation resistance at final humidity cycle 102 Megohms minimum at 50 Vdc.	Insul. Res. range (ohms ) final humidity cycle. GOLD PLATING POROSITY	Unwired. wouisebled contact bodies. One part (by volume) concentrated Nitric Acid (S.G.-1.42) to we part distilled water. 30 secs. minimum immersion period.	No visible reaction (bubbles forming) to reagent.	No evidence of reaction to reagent.																																																																				
TEMPERATURE LIFE W/CONTACT LOADING	Wired mated condition, with contacts under specific load: #220 (5 lbs.); #16 12.5 lbs. A current of 100 MA was applied during life of test. Test duration. 1000 hours at temperature of + 200° C (392° F).	Withstand temp life. No damage. No discontinuity higher than 1.0 microsecond. No contact dislodging order load.	No evidence of contact dislodging and/or electrical discontinuity of 1.0 microsecond or greater during the speified temperature life exposure under contact loading conditions. All post test requirements were met.																																																																				

Conclusion

All subject test specimens, connector components, materials, accessories and contacts covered by this report satisfied and/or exceeded the specified requirement.

The successful completion of the qualification program as reported herein, demonstrates the capabilities of the subject ITT Cannon DPK series connectors to comply with stringent verification

qualification requirements in accordance with MIL-C-83733. On the basis of testing, the DPK connector series was granted full OPI status to MIL-C-83733.

Weights

The following are weights for DPK connector assemblies, mounting hardware, contacts, and sealing plugs. All connector weights are listed less contacts (FO) and mounting hardware. The total connector weight is obtained by adding mounting hardware, contacts, and sealing plugs weight to the connector assembly weight.

Example:

DPKB-101SK-7 (with 90 contacts and 11 sealing plugs)

	Weight Pounds	Weight Grams

Mounting Styles/Applications

DPK connectors for rectangular or staggered mounting are available in both two- and four-spring mount assemblies, or the same shelf style may be ordered to accommodate bushing assemblies. In the spring mount version the spring-loaded mechanism will compensate for a panel space variation of up to .070(1.78) while insuring electrical and environmental integrity.

DPK connectors are also available with polarizing posts, accommodations for jackscrews, and coupling nuts for cord-to-card and cord-to-panel applications. Another shelf style has two or four mounting holes fitted with captive clinch nuts. For mounting dimensions of the various mounting styles shown here please refer to page 91.

**Style A**  
Mounting style A is designed for cord-to-panel and cord-to-cord applications. Connectors are supplied with two polarizing posts installed and provisions for installation of two jackscrew assemblies or two coupling nut assemblies. (Replaces Mounting Style B.)

Pin Contacts

**Style G**  
Mounting style G is designed for rack-to-panel applications. Connectors are supplied with four .281(7.14) diameter holes which will accommodate either four MS24700-2 bushings or four 231-0019-000 spring mounts,

## Style M

Mounting style M is designed for rack-to-panel applications. Connectors are supplied with two .281 (7,14) diameter holes which are staggered and will accommodate eight two MS24700-2 bushings or two 231-0019-000 spring mounts.

## Style X

Mounting style X is designed for rack-to-panel applications where positive alignment is required before connectors are mated. Plug has two guide pins and two spring mounts (MIL-STO-1533); receptacle has two guide sockets and two .197 (5.00) dia. holes.

## Style Y

Mounting style Y is identical to mounting style X, except the guide sockets are on the plug and the guide pin and springs are on the receptacle.

## Style Z

Mounting style Z is designed for use in rack-to-panel applications. Connectors are supplied with two captive clinch nuts which are staggered.

Polarization (Mounting Style A only)

Polarizing Post Alternate Positions

Pin inserts polarizing positions are 180° opposite socket insert polarizing positions. Shaded areas indicate extended portion of the polarizing post. Cord to panel DPK connectors are available in 35 alternate polarizing positions by changing indexing of the polarizing posts. Keystone corners and hexagonal posts provide this wide range of alternate positions.

Mounting Assembly-Jackscrew/Coupling Nut

Installation of jackscrew and coupling nuts in mounting style A and B.

Mounting Assembly-Bushing/Spring Mount

Installation of mounting styles utilizing bushing and spring mount assemblies.

PLUGS

RECEPTACLES

Mating Forces

The axial forces required to fully mate or separated the plug and receptacle shall not exceed the values listed.

Mating force at .390 (9.91) minimum spacing

Shell Size	Without mounting accessories	Spring mounting	
		Maximum	Normal
A	70 max.	176	145
B	95 max.	176	150

For connectors using spring mounting, the mating forces become a function of the spring loading. Values listed apply to connectors mounted as specified above at minimum panel spacing.

Size 12/RG-179B/U Cable (used in 71C15 layout)

Assembly Instructions

**Step 1.**  
Strip outer jacket to dimensions shown to expose outer conductor.

**Step 2.**  
Slip (or install) ferrule over outer conductor against cable jacket. Exposed portion of the outer conductor must be combed out then folded back over ferrule.

**Step 3.**  
Trim cable to dimensions, as shown. (Ferrule must butt against cable jacket).

**Step 4.**  
Install inner contact against dielectric then crimp contact and center conductor with a M22520/2-01 crimp tool using a M22520/2-30 locator.

**Step 5.**  
Insert cable, ferrule and inner contact to rear of shell and crimp into place with M22520/5-03 crimp tool.

Coaxial Contact/Assembly

249-5500-010 Socket\*  
249-5500-011 PIN\*

**STEP 1.**  
Slide outer ring over cable as shown (Figure 1).

**STEP 2.**  
Strip cable as shown (Figure 1).

**STEP 3.**  
Install body insert, insulator bead, and contact on cable as shown (Figure 2.)

**STEP 4.**  
With body insert, insulator bead, and contact firmly in place, crimp the contact with tool M22520/2-01 (setting number 3) and locator M22520/2-30 (Figure 2). Caution: The assembled components must be tightly in place after crimping.

**STEP 5.**  
Slide body assembly over components and under shield until firmly bottomed in place. Locate outer ring over shield and against body as shown (Figure 3).

**STEP 6.**  
With cable and body assembly securely held together, hex crimp the outer ring with tool CCT-C9 (Figure 3). Important: For optimum hex crimp, firmly bottom the outer ring against the shoulder of the hex die before compressing the handles.

- NOTES:**
1. These assembly instructions apply to 249-5500-010, and 249-5500-011.
  2. The following assembly tools are required:
    - a) CCT-C9 hex crimp tool
    - b) MS3198-Q W/L-3198-C1 contact crimp tool and locator
    - c) 149 C(300 F) hot air gun (recommended): Regal heat Gun No. 9A
    - d) Blades, scissors, and picks

\*These contacts are used in the F59C7 layout.

249-5500-012 Socket\*  
249-5500-013 PIN\*

**STEP 1.**  
Slide heat-shrink sleeve and outer ring over cable as shown.

**STEP 2.**  
Strip cable as shown (Figure 1). Caution: Do not nick shield wires.

**STEP 3.**  
Install body insert, insulator bead, and contact on cable as shown.

**STEP 4.**  
With body insert, insulator bead, and contact firmly in place, crimp the contact with tool M22520/2-01, using setting number 3 and locator M22520/2-30 (Figure 2). Caution: The assembled components must be tightly in place after crimping.

**STEP 5.**  
Slide body assembly over components and under shield until firmly bottomed in place. Locate outer ring over shield and against body as shown (Figure 3).

**STEP 6.**  
With cable and body assembly securely held together, hex crimp the outer ring with tool CCT-C9 (Figure 3). Important: For optimum hex crimp, firmly bottom the outer ring against the shoulder of the hex die before compressing the handles.

**STEP 7.**  
The final step is to shrink the heat sleeve in place with a hot air source of 149 C to 327 C (300 F to 621 F) (Figure 3).

- NOTES:**
1. These assembly instructions apply to 249-5500-010, and 249-5500-011.
  2. The following assembly tools are required:
    - a) CCT-C9 hex crimp tool
    - b) M22520/2-01 contact crimp tool and locator
    - c) 149 C(300 F) hot air gun (recommended): Regal heat Gun No. 9A
    - d) Blades, scissors, and picks

\*These contacts are used in the G59C7 layout.

# Miniature Rack and Panel

# DPA

### DPA-Miniature Rack/Panel

DPA plugs are rugged, miniature rack/panel plugs utilizing maximum insert space in a one-piece shell. Polarization is accomplished with a keystone cornered shell and the coupling means is friction. Operating temperature for the DPA is - 55 C to + 125 C (-67 F to + 257 F)

### DPAF - Float Mount Shells

DPAF plugs are DPA plugs with four rivets with washers on the contact termination side of the connector. Floating rivets are .093 (2.36) I.D. with a minimum of .032 (0.81) float.

### DPAL - Large Flange Shells

DPAL plugs are DPA plugs with a large flange.

### DPAMA - Little CAESAR' Contact Assembly

DPAMA plugs are DPA plugs with the proven LITTLE CAESAR contact assembly for rear insertion, release and extraction of crimp type contacts. Insertion requires no tool; extraction requires an expendable plastic tool. Hard dielectric, closed-entry socket insert has lead-in chamfers for positive mating of pin contacts. Contacts are of simpler, stronger design for greater resistance to bending or damage and are crimpable with the M22520/1-01 tool.

### MODIFIER

Add FO to order connector less contacts. Consult factory for other modifications.

Arrangements with coax contacts, such as 24C2, may be ordered without coax contacts by substituting a "W" for teh "C" e.g., DPA-24C2-34P with two coax contacts becomes DPA-24W2-34P with two cavities. The customer can then order separately any snap in coax contact shown on page 99. The customer is thus able to "create" arrangements with infinite combinations of coax contacts.

## Environmental, Rectangular Connectors for Aircraft, Missile and Ground Support Equipment Applications

Cannon's DPGM, DPJM, and DPJMB connectors are designed for applications where space and weight are prime considerations. Their rectangular shape provides maximum space utilization and permits easy removal of equipment for inspection and/or repair. DPGM and DPJM connectors feature crimp snap-in contacts with ring-type retention while DPJMB connectors feature the LITTLE CAESAR® rear release contact retention assembly (rear insertion, release and extraction of crimp snap-in contacts). They both have one piece diallyl phthalate insulators with polychloroprene wire sealing grommets. They also incorporate a peripheral seal design that allows an axial tolerance of up to .125 (3.175) while still effecting a seal. The 34 shell utilizes a rubber seal encased in such a way that the step down design of the mating 33 shell seats into and against it.

All of these connectors utilize keystone corners for polarization and are coupled by friction. Two shell styles with different mounting provisions are available.

For all new applications, the referenced connectors will be available only with insulators in the normal position, that is, pin insulators in the 34 (receptacle) shells and socket insulators in the 33 (plug) shells.

For replacements it is suggested that where practical, customers using these connectors with reversed insulators change to connectors with insulators in the normal position. However, for those who are unable to change we will furnish connectors with reversed insulators to maintain their equipment usage.

## Standard Data

DPGM/DPJM/DPJMB		
Shell	Material	Aluminum alloy
	Finish	Cadmium plate with olive drab irridite
Insulator	Material	Diallyl phthalate
	Material	Copper alloy
Contacts	Finish	Gold plate
	Termination	Crimp
	No. of Contacts	8, 12, 15, 16, 20, 21, 32, 59, 98
Contact Arrangements		

## How To Order

Contacts, coaxials and junction shells must be ordered separately, except for the DPJMB where the contacts are supplied with the connector. When (ordering or reordering) please specify the 3-4-3 contact part number as shown. We have cross-referenced these new part numbers with the previous part numbers (which have been obsoleted) for your convenience.

Example:

031-0900-001 new "3-4-3" part number  
 (038819-001) previous part number

## Junction Shells

### DPGM

DPGM junction shells are essential for proper installation of connector and are ordered separately.

### DPJM/DPJMB

## Wire Bushings

Small wires should be provided with rubber bushings before crimping. Approximately 1/16 (1.59) of an inch of bushing is visible when installed into grommet. Grommets will seal with out bushings or wire .096 (2.44) to .185 (4.70) to diameter.

## Hole Fillers

All holes in grommet require filling either by a wire and contact, or by means of wire hole plugs.

Contact Size	Part Number

## Assembly Procedures

### Wiring and Crimping Contacts

Wires should be stripped to the dimension appropriate to the contact use

#### 1. CONTACT INTO CRIMP TOOL

Drop contact into crimp tool, it will locate on the contact shoulder.

#### 2. WIRE INTO CONTACT

Take wire stripped to dimensions above, and push into the contact crimp pot until it is completely home.

Where outside diameter of wire in the #12 or COAXIAL contact is less than .096 (2.44), a rubber bushing must be slipped over the wire before crimping (see page 103).

#### 3. CRIMP

Squeeze the crimp tool to secure the wire into the contact. It is not possible to remove the contact from the crimp tool until crimp is completed.

#### 4. REMOVED WIRED CONTACT FROM TOOL

#### 5. INSPECT

If wires are stripped and crimped correctly, the wire will be visible through the small inspection hole in the contact.

### Contact Insertion (DPGM/DPJM)

Inserting #20 & #16 Contacts

Inserting Coaxial & #12 Contacts

After the contacts have been crimped, they should be threaded through the junction shell and inserted with the tools shown below. It is recommended that the contacts be inserted in the center horizontal row first, then work to the top and bottom horizontal rows.

Contact	Tool Description	Assembly Number
#20	CIT - 20	038894-0000
#16	CIT - 16	038895-0000
#12	CIT - 12	038896-0000
Coaxial 50-75,95 & 150 ohm	CIT - C2	038901-0000

### Contact Extraction (DPGM/DPJM)

Extracting #20 & #16 Contacts

Extracting Coaxial & #12 Contacts

If it is necessary at any time to remove contacts, this may be accomplished with an impact extraction tool. Simply place the correct tool on the engaging end of the contact and push. A reversible tip is provided for pins and sockets.

Contact	Tool Description	Assembly Number
#20	CET - 20A	038889-0100
#16	CET - 16	038888-0000
#12	CET - 12	038890-0000
Coaxial 50-75,95 & 150 ohm	CET - C1	038869-0000

# DPGM/DPJM/DPJMB

## Assembly Procedures

### Coaxial Contact Assembly (DPGM/DPJM)

#### Cable Stripping

	Cable Trim Dimensions			Cable Entry Dimensions		
	A	B	C	D min. dia.	E max. dia.	F min. dia.
150 ohm	3/16 (4.76)	1/16 (1.59)	5/32 (3.97)	.154 (3.91)	.183 (4.65)	.202 (5.13)
95 ohm	3/16 (4.76)	1/8 (3.18)	5/64 (1.98)	.106 (2.69)	.139 (3.53)	.153 (3.89)
75 ohm	3/16 (4.76)	1/8 (3.18)	5/64 (1.98)	.122 (3.10)	.158 (4.01)	
50 ohm	1/4 (6.35)	1/8 (3.18)	5/64 (1.98)	.106 (2.69)	.136 (3.53)	

**50 Ohm Contact (RG-196U)**  
(assembly steps 1, 2, 3, 4, 5 & 8)

**75 Ohm Contact (RG-187U)**  
(assembly steps 1, 2, 3, 5 & 8)

**95 Ohm Contact (RG-195U)**  
(assembly steps 1, 3, 6, 7 & 8)

## Assembly Steps

- After the coaxial cable has been stripped to the proper dimensions, tin the center conductor. If O.D. of cable is less than .096 (2.44), slip rubber bushing over wire. (50, 75 & 95 ohm)
- Assemble crimp ring under braid and add bushing to cable. (50 & 75 ohm)

- The center contact is supplied loose in the polyethylene bag. Insert the tinned conductor into the contact. Wire must be visible through inspection hole and dielectric pushed against contact shoulder. For 150 ohm contact shoulder must be flush against bushing. Heat contact with a clean soldering iron. Avoid solder outside contact. (50, 75, & 95 ohm)

- Wrap shim around braid. (50 ohm)

- Feed cable and assembled parts into coaxial shell. Care is required if braid is to fit smoothly inside the shell. (50 & 75 ohm)
- Thread crimp ring over cable. Feed center contact into coaxial shell with the shell between the dielectric and the braid. (95 ohm)

- Slip crimp over the braid. (95 ohm)
- Crimp - crimp tool must be located 1/16 (1.58) to 5/64 (1.98) from shoulder of coaxial. (50, 75 & 95 ohms)

## DPD/DPDMA

- Rectangular Rack/Panel Connectors
- Non-Environmental Single and Two-Gang Configurations

Cannon's DPD Rack and Panel connectors are distinguished from other connector lines by their rectangular shape which provides maximum space utilization on a rack or chassis mounted equipment. The DPD is used in any commercial application where moisture/ environmental resistance is not required, such as I/O connector or computer panels, GFE test equipment, and GSE ground support equipment. For example, one-half of a connector assembly is mounted on a radio rack, or panel, and the mating connector is attached to a cable that

connects to another instrument or rack. The DPO has a temperature range of -55°C to +125°C (-67°F to +257°F).

In addition to standard DPD connectors with solder contacts, the DPDMA version has rear insertion, rear release crimp, snap-in contacts that feature the LITTLE CAESAR®, rear. release contact retention assembly used in many other ITT product lines.

DPD-33/DPDMA-33 Plug

DPD-34/DPDMA-34 Receptacle

DPD2-33/DPD2MA-33 Plug

DPD2-34/DPD2MA-34 Receptacle

### DPD - Standard Rack and Panel Connector Series

DPD connectors are the original rectangular rack and panel connectors with solder type contact termination, accommodating a wide range of contact arrangements and a variety of endbells and junction shells.

### DPDMA - LITTLE CAESAR® Contact Assembly

DPDMA connectors are DPD's with the LITTLE CAESAR contact assembly for rear insertion, release and extraction of crimp type contacts. Contacts are inserted by hand, and extraction is accomplished with the use of an expendable plastic

tool. Hard dielectric, closed-entry socket inserts have lead-in chamfers for positive mating of pin contacts during engagement. Both the DPD and DPDMA connectors are intermateable.

### DPD2 - Two Gang Version of DPD

DPD2 connectors are two-gang versions of the DPD solder type connectors designed to handle double the circuitry in instrument panel disconnect applications. The DPD2 is identical in shell style and materials to the DPD, but features a center coupling screw for positive engagement. Various coupling devices are shown on pages 114-115. The DPD2 may also be ordered without the engaging device by

omitting the letter code "M" as shown in the ordering nomenclature. Two optional polarizing posts give up to six alternate insert positions (page 112).

### DPD2MA - LITTLE CAESAR® Contact Assembly

DPD2MA connectors are DPD2 connectors with the LITTLE CAESAR contact assembly for rear insertion, release and extraction of crimp type contacts. Contact insertion is by hand and extraction is by an expendable plastic tool. Hard dielectric, closed-entry socket inserts have lead-in chamfers for positive mating of pin contacts during engagement. DPD2 and DPD2MA connectors are intermateable.

\*32C2 arrangement may be purchased less coaxial contacts as -30. All contact variations shown for 32C2 may be purchased in the DPDMA.

### DPD2/DPD2MA

DPD2 Insert assemblies consist of two standard DPD insert mounted in a DPD2 shell. They are identified as insert "A" and insert "B". Any two inserts with similar contact arrangements can be used together.

The tabulation lists the DPD2 contact arrangement ordering number for the the combination of two inserts. For complete information on each insert, see page 113. Consult factory for combination layouts not shown.

# DPD/DPDMA

## Stripping Instructions

ITT Cannon recommends resistance soldering for all solder contacts, particularly for RF cable where excessive heat will damage the dielectric. Wires should be pre-tinned. Shells, bushings, endbells and junction shells (where applicable) must be slipped over wire bundles before soldering or crimping is started. The mechanical steps in wiring coaxials are described below.

Coax Type	Cable Size	A	Trim B	C
Straight R Coax	RG-7/U	.171 (4.34)	.421 (10.69)	.515 (13.08)
	RG-59/U	.171 (4.34)	.546 (13.87)	.671 (17.04)
	RG-62/U	.171 (4.34)	.543 (13.87)	.671 (17.04)
90°angle R Coax	RG-7/U	.218 (5.54)	.312 (7.92)	.437 (11.10)
	RG-58/U	.218 (5.54)	.531 (13.49)	.593 (15.06)
	RG-59/U	.218 (5.54)	.531 (13.49)	.593 (15.06)
	RG-62/U	.218 (5.54)	.531 (13.49)	.593 (15.06)

### R Coaxial (Straight and 90°)

1. Cut cable even. Trim to dimensions shown on tabulation. Care should be taken not to injure the conductor or dielectric.
2. Comb braid, tin conductor and remove flux. If a 90° contact is used, bend conductor 90° after tinning.

3. Remove solder pot cover. Insert cable and solder conductor to contact. If a straight contact is used, the dielectric should but against contact solder pot.
4. Replace solder pot cover and solder braid to ferrule.

## Engaging Devices

### Single Gang - DPD/DPDMA

The DPD/DPDMA can be engaged by means of a No. 10-32 steel jack screw and clinch nut. This coupling device is designed to fasten connectors securely when they are used in other than standard rack/ panel applications. The jack screws and clinch nuts are mounted on the shell flanges at the factory. They may be called out on either -33 or -34 shells, although it is preferred to have jack screws on the -33 shell and the clinch nuts on the -34 shell. The device can be ordered on both DPD and DPDMA.

### How to Order

DPD-\*\*-34\*-1\* N      DPD-\*\*-33\*-1\* S  
 N = Clinch Nut  
 S = Jack Screw

The suffix "N" or "S" is placed immediately after the mounting hole variation; i.e., -1AN, -1AS, etc.

### Two Gang - DPD2/DPD2MA

The DPD2 is engaged by means of a variety of screw mechanisms. Engaging devices are interchangeable (within the thread group) with male or female mounting on either 33 or 34 shells. The accompanying tabulation lists the available engaging devices, male opposite female, with which they mate.

### How to Order

# DPD/DPDMA

## Polarization

### DPD/DPDMA

DPD 33 with  
POLARIZING POSTS

DPD 34 with  
POLARIZING KEYWAYS

DPD connectors can be supplied with polarizing posts to provide six or more alternate positions. This feature prevents cross plugging where two identical connectors are mounted close together. Shells with polarizing posts can be ordered by adding the desired position to the part number; for example: DPD-12C4-34P-1A-POS. Y. Polarizing positions are shown below and are face view of the 33 (plug) shell.

Shaded area indicates extended portion of polarizing post.

### DPD2/DPD2MA

DPD2 series can be supplied with two polarizing posts to provide six or more alternate positions. This feature is designed to assist in preventing cross

plugging. At present shells are modified upon request only, by adding the desired position to the part number; e.g., DPD2-156-34PM-Pos. V. See

drawing below for available positions. Polarizing positions shown are face view of 33 shell.

Shaded area indicates extended portion of polarizing post.

## Cannon Rack and Panel

**THIS NOTE MUST BE READ IN CONJUNCTION WITH THE PRODUCT DATA SHEET/CATALOG. FAILURE TO OBSERVE THE ADVICE IN THIS INFORMATION SHEET AND THE OPERATING CONDITIONS SPECIFIED IN THE PRODUCT DATA SHEET/ CATALOG COULD RESULT IN HAZARDOUS SITUATIONS.**

### 1. MATERIAL CONTENT AND PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.

a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.

b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

### 2. FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

**There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionization and burning.**

Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet/Catalog are exceeded and can cause breakdown of insulation and hence electric shock. If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonization of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

### 3. HANDLING

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers. Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

### 4. DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

### 5. APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths. Always use the correct application tools as specified in the Data Sheet/Catalog. Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

### IMPORTANT GENERAL INFORMATION

**(i) Air and creepage paths/Operating voltage.** The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations.

For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

### (ii) Temperature

All information given are temperature limits. The operation temperature depends on the individual application.

### (iii) Other important information

Cannon continuously endeavors to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.

### Product Warranty

ITT Electronic Components, a Division of ITT Corporation manufactures the highest quality products available in the marketplace; however these products are intended to be used in accordance with the specifications in this publication. Any use or application that deviates from the stated operating specifications is not recommended and may be unsafe. No information and data contained in this publication shall be construed to create any liability on the part of Cannon. Any new issue of this publication shall automatically invalidate and supersede any and all previous issues. A limited warranty applies to Cannon products. Except for obligations assumed by Cannon under this warranty, Cannon shall not be liable for any loss, damage, cost of repairs, incidental or consequential damages of any kind, whether or not based on express or implied warranty, contract, negligence or strict liability arising in connection with the design, manufacture, sale, use or repair of the products. Product availability, prices and delivery dates are exclusively subject to our respective order confirmation form; the same applies to orders based on development samples delivered. This publication is not to be construed as an offer. It is intended merely as an invitation to make an offer. By this publication, Cannon does not assume responsibility or any liability for any patent infringements or other rights of third parties which may result from its use. Reprinting this publication is generally permitted, indicating the source. However, Cannon's prior consent must be obtained in all cases.

## Rack & Panel Connectors

ITT is the world leader in rack and panel connectors, offering unmatched variety of shell configurations and insert arrangements, materials, plating and contact options. Many of our standard and custom designs meet the stringent requirements of ARINC 600, ARINC 404 (MIL-C-81659), and MIL-DTL-83733 standards.

[www.ittcannon.com/rackandpanel](http://www.ittcannon.com/rackandpanel)

## Circular/Filter/Hermetic Connectors

As a world leader in circular, filter and hermetic connectors, ITT can leverage its design and manufacturing expertise to fit virtually any application. Our expertise includes fast positive mating for a wide range of military applications, as well as numerous sizes and contact configuration for various harsh environments. ITT can also meet numerous specs, including NATO and MIL standards.

## D-Subminiature Connectors

Cannon invented D-sub connectors in 1952. Our family of D-Subs now includes combinations of signal, power and RF, as well as severe service sealed connectors. Cannon D-Subs are available with an extensive line of backshells and accessories and are one of the most economical shielded connector solutions available. Qualified to the MIL-DTL-24308 specification.

[www.ittcannon.com/dsubs](http://www.ittcannon.com/dsubs)

## Fiber Optic Connectors and Cable Assemblies

Cannon fiber optic solutions provide an excellent performance/cost value. Performance can be tailored to the end system, and our use of superior materials and bonding agents provides highly effective solutions. Our wide variety of products includes fiber optic hybrid contacts, multi-channel, rack and panel, and hi-rel assemblies, including MIL and ARINC standard solutions.

## Microminiature Connectors

Cannon microminiature connectors offer high performance and reliability with exceptional versatility. Available in rectangular, circular and strip configurations for countless applications, many of our connectors meet or exceed applicable requirements of the MIL-DTL-83513 specification.

[www.ittcannon.com/micro](http://www.ittcannon.com/micro)

ITT's Electronic Components business ([www.ittcannon.com](http://www.ittcannon.com)) is an international supplier of connectors, interconnects, cable assemblies, I/O card kits and smart card systems. As a worldwide leader in connector technology for nearly a century, ITT offers one of the industry's broadest product offerings, manufacturing capability worldwide, fast time to market, high volume/high yield capacity, robust design and Value-Based Product Development and an extensive sales and customer support network.
