cannon

CA Threaded Catalog

ITT

ENGINEERED FOR LIFE

Proven Quality, Reliability & Expertise

ITT Cannon is a leading global manufacturer of connector products serving international customers in the aerospace and defense, medical, energy, transportation and industrial end markets.

Whether delivering critical specs to aircraft pilots, streaming data through communications satellites or giving expectant parents a first look at their unborn children, Cannon connects the world's most important information to the people who need it.

In 2015, Cannon celebrated 100 years that helped make history. Cannon products were used in the first "talking" movies and helped transmit the first messages home from the moon. Today we proudly continue our legacy of innovating to connect the world and inspire the successes of the next century – **because amazing things happen when great things connect.**

About ITT

ITT is a diversified leading manufacturer of highly engineered critical components and customized technology solutions for the energy, transportation and industrial markets. Building on its heritage of innovation, ITT partners with its customers to deliver enduring solutions to the key industries that underpin our modern way of life.

Founded in 1920, ITT is headquartered in White Plains, N.Y., with employees in more than 35 countries and sales in a total of approximately 125 countries. For more information, visit www.itt.com.

Our connector portfolio remains the most extensive in the industry.

Offering a reliable and cost effective range of interconnect solutions.

Dimensions shown in mm | Specifications and dimensions subject to change

Introduction

ITT Cannon's circular metal connector series CA Threaded is one of the market standards for harsh environment applications in commercial as well as military applications. Derived from the military standard MIL-C-5015 the product portfolio expanded to meet the needs of industrial and heavy vehicle applications around the globe. As a result the commercial offering exceeds the military portfolio by more than 30%.

Features and benefits

CA Threaded offers a range of features and benefits to customers in all kind of industrial and heavy vehicle markets:

- Threaded coupling mechanism offering extraordinary vibration resistance
- A wide range of contacts for both solder and crimp applications allowing to connect the full wire range up to 50mm^2 cross section
- An extensive range of backshells offering connections of all typical cable solutions with individual wires or jacket cables in shielded or unshielded versions
- Materials that allow to meet the stringent requirements of industrial and especially heavy vehicle markets as
  – temperatures ranging from –55°C up to +200°C
  – media resistance* as brake liquids, gasoline, lubricants and others
  – RoHS compliant product versions

Contact us for detail or your request for a customized solution.

*short time wetting

How to use

This catalog is split in several sections to provide…

- A brief introduction to ITT Cannon and CA Threaded
- A general overview of the CA Threaded product lines
- Detailed product information including contact arrangements, performance and part number data
- Detailed supporting information including accessories and tooling

The fastest way to find your product of choice is to follow these steps

1 **Select your product** using the "ordering reference" option

2 **Use the detail pages** to better understand the available options like connector styles, contact arrangements and contacts options

3 **Add accessories and tooling options** on the related pages. A connector assembly instruction is available upon request or visit www.ittcannon.com

4 **Use the contact information** on the back cover to contact us for further questions or to get advise on where you can purchase our products

Table of contents

Product overview

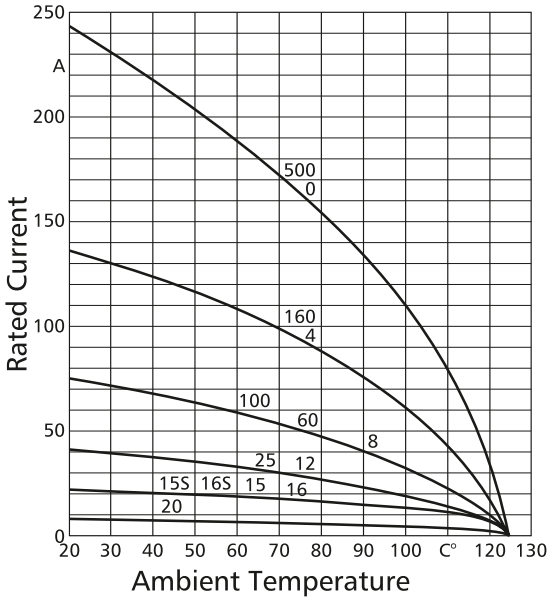
ELECTRICAL DATA

Contact Rating at 20°C (68°F), ambient temperature

Contact size (AWG/metric)	Rated Current ($A_{max.}$) [1]
20/10	8
16S/15S	22
16/15	22
12	41
8/60/100	74
4/160	135
0/500	245

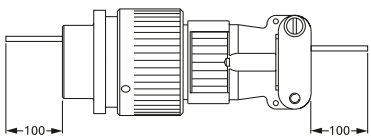
[1] This applies only to the max. rated current for one contact. If several contacts in one contact arrangement are loaded with higher current the temperature may not exceed 125°C

Rated Current vs. Ambient Temperature



Contacts Resistance (Millivolt test)

Contact size (AWG/metric)	Contact resistance mΩ max.
20/10	12,0
16S/15S	6,0
16/15	6,0
12/25	3,0
8/100	1,0
4/160	0,3
0/500	0,2



Insulation Resistance

Standard insulator material >1000 MΩ
FKM insulator material (upon request) >5000 MΩ

Air and Creepage Path (min.)

Voltage class	Instr.	A	D	E
Air path, mm	0,7	1,1	2,8	4,8
Creepage path, mm	0,7	1,1	2,8	4,8

Operation Voltage

Operating voltage for CA Threaded connectors is limited to 50VAC / 75VDC according to the safety regulations defined in the European Low Voltage Directive (LVD) 2014/35/EU. For other uses or regions please see appropriate regional regulations.

Test voltage

Service rating	Test voltage Vrms
Instruments	1050
A	1600
B	4500
D	2500
E	3000

MECHANICAL FEATURES

Ambient temperature

Neoprene: –55/125°C (–67/257°F), FKM: –30/200°C (–22/392°F)*

ENVIRONMENTAL SEALING

Up to IP 65 (in mated condition) Acc. to DIN EN 60068-1

Mating Cycles min. 500

Min. Separating Force per Contact

Contact size		Separating force
metric	AWG	N min
10	20	0,3
15S/15	16S/16	1,0
25	12	1,5
60/100	8	3,0
160	4	4,0
500	0	8,5

Contact Retention Apply test force in mating direction

Contact size		Test force
metric	AWG	N
10	20	30
15S/15	16S/16	35
25	12	55
60/100	8	80
160	4	90
500	0	95

Coupling Torque

The admissible coupling torque has to be tested under harnessed condition

	Admissible torque	
Shell size	Closing and opening (Nm_{max})	Opening (Nm_{min})
10SL	3,0	0,15
12S	2,8	0,23
14S	5,9	0,35
16S/16	7,0	0,46
18	8,0	0,58
20	9,0	0,70
22	10,6	0,80
24	12,9	0,80
28	16,7	0,92
32	18,1	1,02
36	23,9	1,05

Materials

Shell	Aluminum alloy
Contacts	Copper alloy, silver plated or gold plated
Insulator/Grommet	Polychloroprene (Standard) FKM (High temperature)

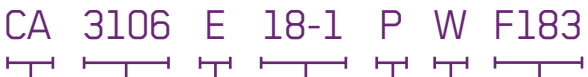
Ordering reference

Part number explanation



Series CA – Cannon Designation	

Shell type	
3100 – Wall mounting receptacle	see page 24-26
3101 – Cable connecting plug	see page 27-29
3102 – Box mounting receptacle	see page 30-31
20 – Box mounting receptacle, rear mounting	see page 30-31
3106 – Plug, straight	see page 32-34
3108 – Plug, 90°	see page 35

Class
E – Backshell with cable clamp[1]
F – Backshell for flex tube
PG – Adapter for PG-termination
ME – Adapter for Metric-termination
L – PCB solder termination
R – Short backshell, no strain relief

Shell size
10SL, 12S, 14S, 16, 16S, 18, 20, 22, 24, 28, 32, 36

Contact arrangement	see page 9-21

Contact type
P – pin
S – socket

Insulator position	see page 9-19

Modification	
13 – shielded version, solder pot contacts, no grounding spring	
14 – shielded version, metric crimp contacts, no grounding spring	
15 – shielded version, AWG crimp contacts, no grounding spring	
48 – F backshell with O-ring seal without ferrule and grommet	
83 – Grounding spring on the barrel	
A176 – Contacts gold plated	see page 42-43
A232 – Zinc cobalt black plating, RoHS compliant	
A233 – Zinc cobalt green plating, RoHS compliant	
A240 – Zinc nickel plating, blue iridescent, RoHS compliant	
BM29 – Threaded flange holes, shell styles 02, 20 and 00	
DN – Adapter for heat shrink boots	
F0 – Without contacts (to be ordered separately)	
F42 – Without backshell, grommet and ferrule	
F80 – AWG Crimp contacts	
F137 – O-ring under the coupling nut[2]	
F183 – Metric Crimp contacts	

[1] except shell style 02/20 [2] a number of plugs are already featured with this O-ring

32	50,9	48,3	4,5	44,5		
36	57,2	53,1	4,5	49,2		

HARNESSING

CA Threaded connectors are designed for single wire harnessing, if an individual wire sealing grommet is used. Wires have to conform to wire and insulation diameters with the data given in the following table:

Contact size		Crimp/solder contacts		Insulation Ø	
AWG	metric mm	AWG	metric mm²	AWG	metric mm
–	10	–	0,75-1,0	–	1,45-2,5
16S/15S	16/15	16	0,75-1,5	1,6-2,8	1,60-2,8
12	25	12	2,5	2,9-3,5	2,9-3,5
–	60	–	6,0	–	3,5-4,9
8	100	8	10,0	4,2-5,8	5,5-6,5
4	160	4	16,0	6,2-9,0	7,1-9,0
0	500	0	50,0	10,5-13,0	10,5-13,0

WIRE STRIPPING

Either mechanical or hot stripping can be used. Prevent conductors or insulators damage. For solder contacts, conductors have to be pretinned.

Note: Do not twist conductors used with crimp contacts. Do not touch uninsulated conductors before crimping, twisting of conductors and grease or lubricants on the wires cause poor crimp quality.

Contact size		Stripping length
AWG	metric	mm
–	10	4,0 + 0,4
16S/15S	16/15	6,0 + 0,5
12	25	6,0 + 0,5
8	60/100	11,0 + 0,8–0,4
4	160	11,0 + 0,8–0,4
0	500	13,0 + 0,8–0,4

WIRING HINTS

Strip wires carefully. Do not damage conductors and insulation. For solder connections, wires have to be pretinned. Do not twist conductors used in crimp contacts, otherwise no perfect crimp connection will be achieved. Do not touch conductors before crimping. Film of grease or lubricants on the strands will cause poor crimp quality.

For detailed assembly instructions please visit www.ittcannon.com and search for the keyword "CA Bayonet Assembly Instruction".

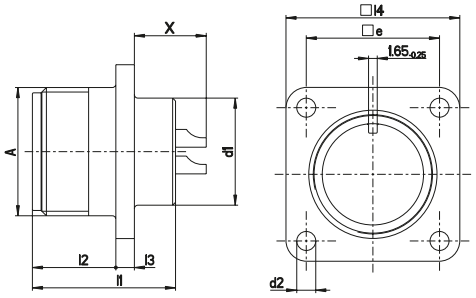
BOX MOUNTING RECEPTACLE

CA3102

CA3102E designates a box mounting receptacle for front panel mounting with square flange. It mates with plugs CA3106 and CA3108.
If crimp version is required please order CA3102E…F80 or CA3102E…F183.



Dimension **X** max for pin or socket (solder contacts only)

STRAIGHT PLUG ENFORCED BACKSHELL, THROUGH-BULKHEAD CLASS E, R

CA06EA

CA06EA is a straight plug with adapter for gland nut sealing and cable clamp. It is designed for usage with jacketed cable. It provides cable strain relief, individual wire sealing plus sealing of the outer cable jacket. It has an O-ring under the coupling nut. It mates with receptacles 3100, 3102, CA02L, CA20E, CA20L and 3101 plugs

TELESCOPING BUSHING

Telescoping bushings (used with cable clamp) keep dirt, moisture out of backshell. Taping or wrapping wires is eliminated since bushing protects wires going through clamp. Combination of bushings may be used to decrease cable entry diameter to improve sealing. Material is Polychloroprene.

WIRE HOLE FILLERS

Where contacts are not engaged, the contact cavities are to be closed with wire hole fillers. Wire hole fillers are inserted into the rear end of the grommet (see CA-B Assembly instruction available on the ITT webpage ***www.ittcannon.com***)

SEALING GASKETS

For front and rear panel mounting. These sealing gaskets made of neoprene are used with flange receptacles for sealing purposes between the shell and the flange.

CA Layout Overview with standard contact wire size

The table below shows all available contact arrangements (layouts) available for ITT's CA product line.

For each layout the crimp contact styles and wire cross sections used as default are shown.

If other crimp sizes are required the connector can be ordered with suffix "-F0" (without contacts).

See ordering key on page 8 for details. In this case, separate contacts can be selected according to contact selection tables on pages 42-43.

*The numbers represent modifications for contact termination as listed on page 8. E.g. CA3106E20-29S-14 is the modification for a shielded endbell with metric crimp contacts.

Insertion & Extraction Tools

Crimp contacts should be inserted or, if needed, extracted with the correct tools. In order to avoid damage to the insulator it is recommended to use guide pins for the insertion of socket contacts.

Notes

1. For insertion and extraction of the contacts and for connector assembly see Assembly instructions CAS25094
2. Standard contacts acc. to VG95234

Product Safety Information

This note must be read in conjunction with the Product Data Sheet / Catalog. Failure to observe the advice in this information sheet and the operating conditions specified in the Product Data Sheet/ Catalog could result in hazardous situations.

1. Material content and physical form

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.

a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.

b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

2. Fire characteristics and electric shock hazard

There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionization and burning.

Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire.

Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet / Catalog are exceeded and can cause breakdown of insulation and hence electric shock. If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonization of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

3. Handling

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers. Electrical connectors may be damaged in transit to the customer, and damage may create hazards. Products should therefore be examined prior to installation / use and rejected if found to be damaged.

4. Disposal

Incineration of certain materials may release noxious or even toxic fumes.

5. Application

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body.

The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths.

Always use the correct application tools as specified in the Data Sheet / Catalog. Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

Important general information

(i) Air and creepage paths/Operating voltage. The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations.

For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

(ii) Temperature. All information given are temperature limits. The operation temperature depends on the individual application.

(iii) Other important information. Cannon continuously endeavors to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.
