SURE-SEAL Series

ITT

ENGINEERED FOR LIFE

Reliability. Low Cost.

Performance. Delivery.

SURE-SEAL connectors – a series of low cost and environmentally sealed connectors.

The one-piece molded body and rugged multiple moisture seals make the SURE-SEAL connector a natural for applications whose outside contaminants must be excluded.

One of the many features of the SURE-SEAL connector is its simplicity. In addition to the contacts, only two other parts – the connector bodies – are required to complete the interconnect.

SURE-SEAL connectors were designed to meet the increased requirements for safety and reliability in the automotive field brought about by Department of Transportation regulations. These sealed connectors satisfy all of the parameters defined by automotive / industrial standards including vibration, shock, temperature cycling, salt water spray and immersion, petroleum derivatives, industrial gas, and most important low millivolt drop and low contact resistance.

Features

Low Installed Cost

SURE-SEAL connectors are designed to be terminated by the O.E.M.

Field Service

When necessary, SURE-SEAL connectors can be changed, modified or wired in the field.

One-Piece Molded Bodies

The SURE-SEAL connector incorporates a very simple one-piece molded body. No other parts – other than contacts – are needed to assemble a complete connector.

Low Cost Stamped Contacts

Without sacrificing quality, the cost of SURE-SEAL connectors is kept low with stamped contacts available on reels in a continuous strip for use on the industry accepted semi automatic crimp press with mini applicator. All contacts utilize a “B” type crimp.

Wide Wire Gauge and Cable Accommodations

Ideally suited to be terminated on wires of size 0,4-1,5 mm² (AWG 14-20), wire sizes with insulation in the range of 1,4-1,8 for Mini Sure Seal, resp. 1,8 - 2,8 for Sure Seal, termination to multiconductor jacketed cables in the range of 5,3 to 12,4 mm diameter and can be terminated to five different wire ranges depending on contact arrangements with total environment sealing still assured.

Polarized Against Mis-Mates

SURE-SEAL connector mating faces are constructed with two stepped planes; the plug and receptacle must be properly oriented in order for the contacts to engage. For “blind” mating a raised indexing rib and matching raised indexing spline has been added to the plug and receptacle.

Water Submersible

Not just splash proof, but truly submersible for short periods of time. SURE-SEAL fulfills the requirements according to IP68, IEC 60529. Note: Although SURE-SEAL can withstand submersion, it is not designed to be an underwater connector.

Resistant to Automotive/Commercial Environment

SURE-SEAL connectors are designed to meet temperatures from -40°C to 105°C under conditions of high humidity severe vibration, ice and mud. Sealing integrity is still maintained with exposure to brake fluid, gasoline, diesel fuel, anti-freeze, ultra violet, ozone, steam cleaning under normal operating conditions.

Environment & Health

RoHS compliant

Interconnect Technologies & Solutions for the Transportation Industry

For over a century, ITT has been developing innovative solutions for harsh environment applications. We have a proven track record of demonstrating our expertise and commitment to the transportation industry, offering the broadest portfolio of interconnect products.

Our interconnect range include sealed circulars, plastic and metal shell bayonet coupling circulars, miniature metal shell circulars, PC board header connectors and sensor and direct device connectors. ITT is also a systems supplier, providing value-added module and harness assemblies.

In addition to the SURE-SEAL series, we also offer these connectivity solutions:

Cannon APD

In-line and bulkhead connectors are resistant to the harsh environmental conditions (contaminants, vibration and shock) and sealed up to IP69K.

Cannon CA-Bayonet

Signal and power connectors with exceptional sealing against the ingress of fluids and will withstand the effects of high vibrations.

Cannon Trident

Versatile range of electrical connectors based on a standard contact design. Options include: industrial grade, harsh environment and shielded circulars.

Cannon SLC/SLE

Environmentally sealed connector created for printed circuit board, black box, cable-to-cable or bulkhead applications.

Electrical Data

Operating Voltage	48 VDC*
Operating Current	see derating curve
Contact Resistance	10 Milliohms max.
Dielectric Withstanding Voltage	1200 VAC at sea level
Insulation Resistance	100 Megaohms min.

Wire Dimensions

Wire Range	0,4–0,75 mm ² (AWG 20—18)
Wire Insulation Sealing Range	1,4–1,8 mmØ

Mechanical Data

No. of contacts per connector	2 to 4
Polarization	Stepped plane positive polarization and visual polarization
Contact Retention	30 N minimum
Durability	50 mating cycles with stamped contacts, tin-plated 100 mating cycles with machined contacts, silver-plated

Environmental Data

Temperature Range	-40°C to 105°C
Humidity Range	up to 95% r.h.
Sealing	IP 68 (100 kPa = 1 bar/12 h) (IEC 60529)
Salt Spray	100 h (DIN 50021, test SS)
Vibration	Sine wave 10-55 Hz, 1,5mm (IEC 60512-4, test 6d)
Physical Shock	Half sine 500 m/s ² , 11ms
Fluid Compatability	Fuel, engine oil, break fluid, detergent fluid and others
Ozone Resistance	50 pphm, 48 h (DIN 53509-1)

Instructions

- Strip wire (neither twist nor touch stripped section)

- Insert single contact in correct crimp profile and locate onto wire stop (refer to table for outer insulation diameter).
- Close hand crimp tool until it holds contact in place.
- Insert pre-stripped wire until light contact is made on wire stop, and lay wire into contact barrels.
- Fully close hand crimp tool until ratchet releases.
- Remove contact.
- Inspect crimped area visually.

Pneumatic Crimp Tool WA27F-CE
for machined contacts

This tool is designed for 8-indent crimps. For insertion and removal of contact insert please refer to tool description.

Specifications

Air pressure 5.7-6.3 bar
Weight 4 kg

Sequence

- Mount correct contact positioner.
- Adjust tool for correct wire size using reference gauge (refer to table).
- Place contact in correct positioner.
- Insert stripped wire into crimp bore hole of contact.

Guiding pin-Foot pedal release	970-8606-022
Widening tip	252-7015-003

Wiring Instructions

Note: Insert accessories (e. g. Boot) prior to assembly.

Stripping lengths

For jacketed cables the following stripping lengths have to be adhered to.

No. of contacts	min. stripping lengths mm
2, 3, 4	40
5, 6, 7	45
8, 9, 10	50

Insertion contacts

SURE-SEAL connectors have a one-piece connector body made of rubber. Contacts are inserted from the rear side. They may only be inserted with the approved tools (refer to page 19-23).

Plug or receptacle must be sprayed with lubricating fluid before contact insertion.

Approved lubricating fluid

Manual insertion

Isopropyl alcohol

Cleaning solvent HAKU 1025-975 or HAKU 1025-800, Chem. Werke Kluthe Gottlieb-Daimler Straße 12, 69115 Heidelberg

Semi-automatic insertion

CBITG...and CBITS-...Hellerine (HellermanTyton, Grosser Moorweg 45, 25436 Tomesch) for sprayer.

With hand insertion tools

Fasten supports (table, vice etc.)

An inclined position is recommended for easier assembly.

- Dip insulator in lubricating fluid and shake off excess fluid.
- Open fixing clip and place connector body into support block (refer to page 20).
- Insert cable resp. single wires into accessories (e. g. boot).
- Pay attention to correct sequence and position
- Install guiding pin 317-8588-000 (does not apply to Mini SURE-SEAL) in socket contact.

- Place contact in hand insertion tool. The contact shoulder has to touch the front side of the contact tip.

- Insert contact into the connector until it snaps in by applying constant pressure. Note: Make sure that the contact and tool are inserted parallel to the insulator axis. Do not tilt!

Note: Socket or pin contacts have to be inserted into the correct contact cavity.

- Remove guiding pins from the socket contacts!
- Mount accessories.
- Remove the terminated connector from support after insertion of all contacts and check correct fit and position of the contacts in the insulator.

Usage of jacketed cable with boot

No. of contacts	X
2, 3, 4	22
5, 6, 7	26

Wiring Instructions

With CHPZ-240 hand lever insertion press
Mount correct support block and insertion tip to CHPZ-240 insertion press (refer to page 22).

- Dip connector body into lubricating fluid and shake off excess fluid. Open fixing clip and place connector body in support block (refer to page 20).
- Insert wire into accessories. Pay attention to correct sequence and position (refer to illustration page 25).
- Insert guiding pins 317-8588-000 (only for Standard SURE-SEAL) into socket contacts (refer to illustration page 25).
- Place contact into insertion tip. Contact shoulder has to be flush with lower edge of the contact tip.
- Adjust height of hand lever press: For first insertion loosen stop at the upper end of the press. Move down lever slowly and steadily and adjust stop until contact is in the correct position (refer to page 21). Tighten stop. This adjustment may be used for both socket and pin contacts. After this adjustment the lever is simply pressed until stop is reached. Remove terminated connector from support after all contacts are inserted.
- Check fit and position of contacts in insulator.
- Remove guiding pins from socket contacts.
- Assemble accessories.

For Assembly Machines CBITG and CBIT5 refer to separate operating instructions

Standard SURE-SEAL

Plug 2 to 4 contacts

Receptacle 2 to 4 contacts

Plug 5 to 10 contacts

Receptacle 5 to 10 contacts

Different dimensions for machined contacts are given in paranthesis.

Mini SURE-SEAL

MSS plug 2 to 4 contacts

Product Safety Information

THIS NOTE MUST BE READ IN CONJUNCTION WITH THE PRODUCT DATA SHEET/CATALOG. FAILURE TO OBSERVE THE ADVICE IN THIS INFORMATION SHEET AND THE OPERATING CONDITIONS SPECIFIED IN THE PRODUCT DATA SHEET/ CATALOG COULD RESULT IN HAZARDOUS SITUATIONS.

1. MATERIAL CONTENT AND PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.

- a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.
- b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

2. FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionization and burning. Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet/Catalog are exceeded and can cause breakdown of insulation and hence electric shock. If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonization of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

3. HANDLING

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers. Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

4. DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

5. APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no

solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths. Always use the correct application tools as specified in the Data Sheet/Catalog. Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

IMPORTANT GENERAL INFORMATION

(i) Air and creepage paths/Operating voltage. The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations.

For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

(ii) Temperature

All information given are temperature limits. The operation temperature depends on the individual application.

(iii) Other important information

Cannon continuously endeavors to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.

All data subject to change without notice.

Circular/Filter/Hermetic/Fiber Optic Connectors

As a world leader in circular, filter, and hermetic connectors, ITT can leverage its design and manufacturing expertise to fit virtually any application. Our expertise includes fast positive mating for a wide range of military applications, as well as numerous sizes and contact configurations for various harsh environments. Our wide variety of fiber optic products include hybrid contacts, multi-channel, rack and panel, and hi-rel assemblies, including MIL and ARINC standard solutions. ITT can meet numerous specs, including NATO and MIL standards.

D-Subminiature Connectors

Cannon invented D-sub connectors in 1952. Our family of D-Subs now includes combinations of signal, power and RF, as well as severe service sealed connectors. Cannon D-Subs are available with an extensive line of backshells and accessories and are one of the most economical shielded connector solutions available. ITT D-Sub connectors are qualified to the MIL-DTL- 24308 specification.

Microminiature Connectors

Developed first by Cannon in the 1960's, Interconnect Solutions microminiature connectors offer high performance and reliability with exceptional versatility. Available in rectangular, circular, and strip configurations for countless applications, many of our connectors meet or exceed applicable requirements of the MIL-DTL-83513 specification.

Rack and Panel Connectors

Initially pioneered by Cannon during the 1930s, Interconnect Solutions is the world leader in rack and panel connectors, offering unmatched variety of shell configurations and insert arrangements, materials, plating, and contact options. Many of our standard and custom designs meet the stringent requirements of ARINC 600, ARINC 404 (MIL-C-81659), and MIL-DTL-83733 standards.

Transportation

The ITT ICS interconnect range includes sealed circular and rectangular connectors in metal or plastic shells. These configurations include board to cable or cable to cable/ bulkhead applications. Both signal and power contacts can be combined in various layouts. All product lines within the Transportation segment offer very low contact resistance providing maximum signal integrity.
