| Parameter | Rating | Units |
| :--- | :---: | :---: |
| AC Operating Voltage | $20-240$ | $\mathrm{~V}_{\mathrm{rms}}$ |
| Load Current | 3 | $\mathrm{~A}_{\mathrm{rms}}$ |
| On-State Voltage Drop | 0.8 | $\mathrm{~V}_{\mathrm{rms}}\left(\mathrm{I}_{\mathrm{L}}=3 \mathrm{~A}_{\mathrm{rms}}\right)$ |
| Blocking Voltage | 800 | $\mathrm{~V}_{\mathrm{P}}$ |

## Features

- Load Current up to $3 \mathrm{~A}_{\text {rms }}$
- $800 \mathrm{~V}_{\mathrm{p}}$ Blocking Voltage
- 5 mA Sensitivity
- $5000 \mathrm{~V}_{\text {rms }}$ Input to Output Isolation
- Off-State dV/dt: $1000 \mathrm{~V} / \mathrm{\mu s}$ Minimum
- 12.5 mm External Creepage Distance with Appropriate Layout
- Zero-Cross Switching
- DC Control, AC Output
- Optically Isolated
- TTL and CMOS Compatible
- Low EMI and RFI Generation
- High Noise Immunity

## Applications

- Programmable Control
- Process Control
- Power Control Panels
- Remote Switching
- Gas Pump Electronics
- Contactors
- Large Relays
- Solenoids
- Motors
- Heaters

## Description

CPC1966B is an AC Solid State Switch utilizing dual power SCR outputs. This device also includes zero-cross turn-on circuitry and is specified with a blocking voltage of $800 \mathrm{~V}_{\mathrm{p}}$.

In addition, the tightly controlled zero-cross circuitry ensures low noise switching of AC loads by minimizing the generation of transients. The optically coupled input and output circuits provide $5000 \mathrm{~V}_{\text {rms }}$ of isolation and noise immunity between the control and load circuits. As a result, the CPC1966B is well suited for industrial environments where electromagnetic interference would disrupt the operation of plant facility communication and control systems.

## Approvals

- UL 508 Certified Component: File E69938
- CSA Industrial Control Switches Approval: Pending

## Absolute Maximum Ratings @ $25^{\circ} \mathrm{C}$

| Parameter | Ratings | Units |
| :--- | :---: | :---: |
| Blocking Voltage $\left(\mathrm{V}_{\text {DRM }}\right)$ | 800 | $\mathrm{~V}_{\mathrm{P}}$ |
| Reverse Input Voltage | 5 | V |
| Input Control Current <br> Peak (10ms) | 50 | mA |
|  | 1 | A |
| Input Power Dissipation ${ }^{1}$ | 150 | mW |
| Total Power Dissipation ${ }^{2}$ | 2400 | mW |
| Isolation Voltage Input to Output | 5000 | $\mathrm{~V}_{\text {rms }}$ |
| ESD, Human Body Model | 8 | kV |
| Operational Temperature | -40 to +85 | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature | -40 to +125 | ${ }^{\circ} \mathrm{C}$ |

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at conditions beyond those indicated in the operational sections of this data sheet is not implied.

Electrical Characteristics @ $25^{\circ} \mathrm{C}$

| Parameters | Conditions | Symbol | Min | Typ | Max | Units |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Manufacturing Information

Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingression. IXYS Integrated Circuits Division classified all of its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, IPC/JEDEC J-STD-020, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a Moisture Sensitivity Level (MSL) rating as shown below, and should be handled according to the requirements of the latest version of the joint industry standard IPC/JEDEC J-STD-033.

| Device | Moisture Sensitivity Level (MSL) Rating |
| :---: | :---: |
| CPC1966B | MSL 1 |

## ESD Sensitivity

AB
This product is ESD Sensitive, and should be handled according to the industry standard JESD-625.

## Reflow Profile

This product has a maximum body temperature and time rating as shown below. All other guidelines of J-STD-020 must be observed.

| Device | Maximum Temperature x Time |
| :---: | :---: |
| CPC1966B | $245^{\circ} \mathrm{C}$ for 30 seconds |

## Board Wash

IXYS Integrated Circuits Division recommends the use of no-clean flux formulations. However, board washing to remove flux residue is acceptable. Since IXYS Integrated Circuits Division employs the use of silicone coating as an optical waveguide in many of its optically isolated products, the use of a short drying bake could be necessary if a wash is used after solder reflow processes. Chlorine- or Fluorine-based solvents or fluxes should not be used. Cleaning methods that employ ultrasonic energy should not be used.
