FDA217
Dual Photovolatic MOSFET Driver

| Parameter | Rating | Units |
| :--- | :---: | :---: |
| Open Circuit Voltage | 12.2 | V |
| Short Circuit Current | 9.1 | $\mu \mathrm{~A}$ |

## Features

- Dual Independent, Floating Outputs for Parallel, Series, or Isolated Configuration
- 24.4 V Open Circuit Voltage in Series Configuration
- $18.2 \mu \mathrm{~A}$ Short Circuit Current in Parallel Configuration
- 5mA Control Current
- Integrated Turn-Off Circuitry
- High Input to Output Isolation: $3750 \mathrm{~V}_{\text {rms }}$
- Replacement of Discrete Components
- No EMI/RFI Generation
- Solid State Reliability
- Machine Insertable, Wave Solderable
- Surface Mount and Tape \& Reel Version Available

## Applications

- MOSFET Driver
- Programmable Control
- Process Control
- Instrumentation
- Telecommunications
- Solid State Relays
- Isolated Switching
- Floating Power Supplies

## Description

The FDA217 is a dual photovoltaic MOSFET driver. Each independent driver consists of an LED that is optically coupled to a photodiode array.

The driver output is controlled by means of the highly effective GaAIAs infrared LED at the input. When the input current is applied to the LED, the light emitted activates the photodiode array, and generates the voltage at the output.

The photodiode array is capable of generating a floating power source with voltage and current sufficient to drive high-power MOSFET transistors. Each photodiode array contains an integrated turn-off circuit that discharges the external MOSFET gate when LED current is removed. This eliminates the need to use external components to facilitate the discharge. The optically coupled technology provides $3750 \mathrm{~V}_{\mathrm{rms}}$ of input to output isolation.

The FDA217 is well suited for use in discrete solid state relay designs and in other isolated switching applications.

## Approvals

- EN/IEC 60950 Certified Component: TUV Certificate: B 121182667002

## Ordering Information

| Part \# | Description |
| :--- | :--- |
| FDA217 | 8-Lead DIP (50/tube) |
| FDA217S | 8-Lead Surface Mount (50/tube) |
| FDA217STR | 8-Lead Surface Mount (1000/reel) |

## Pin Configuration

e3

Absolute Maximum Ratings @ $25^{\circ} \mathrm{C}$

| Parameter | Ratings | Units |
| :--- | :---: | :---: |
| Reverse Input Voltage | 5 | V |
| Input Control Current <br> Peak (10ms) | 50 | mA |
|  | 1 | A |
| Input Power Dissipation $^{1}$ | 140 | mW |
| Total Power Dissipation ${ }^{2}$ | 500 | mW |
| ESD Rating, Human Body Model | 8 | kV |
| Isolation Voltage, Input to Output | 3750 | $\mathrm{~V}_{\text {rms }}$ |
| Operational Temperature | -40 to +85 | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature | -40 to +125 | ${ }^{\circ} \mathrm{C}$ |

${ }^{1}$ Derate linearly $1.33 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$
${ }^{2}$ Derate linearly $6.67 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at conditions beyond those indicated in the operational sections of this data sheet is not implied.

Electrical Characteristics @ $\mathbf{2 5}^{\circ} \mathrm{C}$

Manufacturing Information

## Moisture Sensitivity

(8)
All plastic encapsulated semiconductor packages are susceptible to moisture ingression. IXYS Integrated Circuits Division classified all of its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, IPC/JEDEC J-STD-020, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a Moisture Sensitivity Level (MSL) rating as shown below, and should be handled according to the requirements of the latest version of the joint industry standard IPC/JEDEC J-STD-033.

| Device | Moisture Sensitivity Level (MSL) Rating |
| :---: | :---: |
| FDA217 / FDA217S | MSL 1 |

## ESD Sensitivity

$A$
This product is ESD Sensitive, and should be handled according to the industry standard JESD-625.

## Reflow Profile

This product has a maximum body temperature and time rating as shown below. All other guidelines of J-STD-020 must be observed.

| Device | Maximum Temperature x Time |
| :---: | :---: |
| FDA217 / FDA217S | $250^{\circ} \mathrm{C}$ for 30 seconds |

## Board Wash

IXYS Integrated Circuits Division recommends the use of no-clean flux formulations. However, board washing to remove flux residue is acceptable. Since IXYS Integrated Circuits Division employs the use of silicone coating as an optical waveguide in many of its optically isolated products, the use of a short drying bake could be necessary if a wash is used after solder reflow processes. Chlorine- or Fluorine-based solvents or fluxes should not be used. Cleaning methods that employ ultrasonic energy should not be used.
