Custom Solutions

# YOUR TECHNOLOGY PARTNER

The mission of the Johanson Companies is to translate our customer needs into quality electronic components, produced in factories that are models of excellence, supported by innovative service. With over 30 years of experience, Johanson Dielectrics provides both standard and custom technology solutions tailored to your specific electronic applications.

Our standard product range includes High Voltage and AC Safety Capacitors providing solutions for Lighting, IT and Business Equipment designs. Our X2Y® Capacitor line provides advanced EMI filtering and IC decoupling solutions and our High Capacitance Tanceram® products provide the highest capacitance values in the smallest cases sizes.

Customized solutions in the areas of High Temperature and High AC power ceramic capacitors are available to customers who require a partnered technology solution.

Johanson Dielectrics design and manufacturing operations are located in Sylmar, California and Zhaoqing, PRC. Our quality minded management system utilizes continuous improvement programs focused on increased product reliability, manufacturing through-put, and product performance. Our broad experience, applications support, and responsive service enhance our ability to drive down your total cost of procurement and speed your time to market.

## HIGH FREQUENCY CERAMIC SOLUTIONS

Johanson Technology Inc., Camarillo CA. Products include High Q Capacitors, Ceramic and Wirewound Chip Inductors, and a broad range of LTCC based RF IPCs such as Antennas, Filters, Baluns, Couplers, Matched Filter Baluns, etc.

# INDEX OF PRODUCTS

## ***SURFACE MOUNT CERAMIC CAPACITORS***

---

|   |       |
|---|-------|
| Ceramic Capacitor Prototyping Kits              | 4-5   |
| High Voltage Capacitors 250 - 6,000 VDC         | 6-7   |
| Safety Capacitors 250 VAC, Y2, X1, X2           | 8-9   |
| EMI - X2Y® Filter & Decoupling Capacitors       | 10-13 |
| Low Inductance Capacitors                       | 14    |
| Chip Feedthru Filter Capacitors                 | 15    |
| High Temperature - 200°C Capacitors             | 16-17 |
| High Capacitance Tanceram® Capacitors           | 18-19 |
| SMT Multi-layer Ceramic Capacitors 10 - 200 VDC | 20-21 |

## ***LEADED CERAMIC CAPACITORS***

---

|  |       |
|--|-------|
| SMPS Stacked Capacitors, 125°C & 200°C versions              | 22-23 |
| Mini-SMPS Stacked Capacitors                                 | 24-25 |
| BME Mini SMPS Capacitors                                     | 26-27 |
| Switch-mode Radial Leaded Capacitors                         | 28-29 |
| High Voltage Radial Leaded Capacitors, 125°C, 200°C versions | 30-31 |

## ***PRECISION POWER RESISTORS***

---

|  |       |
|--|-------|
| Resistor Wirewound Precision             | 32-33 |
| Resistor Wirewound Precision SMT         | 34-35 |
| Resistor Wirewound High Power Rating     | 36-39 |
| Resistor Wirewound Chassis Mount         | 40-42 |
| Resistor Thin Film Precision             | 43-46 |
| Resistor Metal Element Current Sense SMT | 47-49 |
| Resistor High Power Low Inductance       | 50-52 |
| Resistor Thick Film, High Temperature    | 53-55 |
| Resistor Metal Element Current Sense     | 56-57 |
| Resistor Power Thin Film                 | 58-60 |

## ***POWER INDUCTORS***

---

|                                   |       |
|-----------------------------------|-------|
| Semi-shielded (Coated) & Shielded | 61-73 |
|-----------------------------------|-------|

## ***PLANAR CAPACITORS & CUSTOM CERAMIC SOLUTIONS***

---

|                         |       |
|-------------------------|-------|
| Planar Array Capacitors | 74-75 |
|-------------------------|-------|

## ***CAPSTRATE & CUSTOMER CERAMIC SOLUTIONS***

---

|   |       |
|---|-------|
| CapStrate® & Customer Ceramic Solutions | 76-77 |
|---|-------|

## ***PART NUMBER, DIELECTRIC, PACKAGING SPECIFICATIONS***

---

|   |    |
|---|----|
| Capacitor General Electrical Characteristics and PN breakdown | 78 |
| Tape and Reel Packaging                                       | 79 |

# CERAMIC CAPACITOR ENGINEERING DESIGN KITS

Johanson Dielectrics, Inc. offers a variety of multi-layer chip capacitor sample kits for proto-type design work. Each kit is grouped by type, size, or voltage and contains a selection of popular values and tolerances. The chips are individually packaged in labeled plastic compartments for easy access. The general range of kit contents is described below. Specific part number details may be found at [www.johansondielectrics.com](http://www.johansondielectrics.com)

| 0402 Ceramic Chip Capacitor Kit                                      |                  |            |                   |             | P/N: S-0402 |  |
|--|------------------|------------|-------------------|-------------|-------------|--|
| 1400 piece sample assortment of selected values from 1.0pF to 0.22μF |                  |            |                   |             |             |  |
| Chip Size  | Voltage Rating   | Dielectric | Capacitance Range | Qty / Value | Total Qty   |  |
| 0402   | 50 VDC - 6.3 VDC | NPO, X7R   | 1.0pF to 0.22μF   | 50 pcs      | 1400 pcs    |  |

| 0603 Ceramic Chip Capacitor Kit                                      |                 |            |                   |             | P/N: S-0603 |  |
|--|-----------------|------------|-------------------|-------------|-------------|--|
| 1400 piece sample assortment of selected values from 1.0pF to 0.22μF |                 |            |                   |             |             |  |
| Chip Size  | Voltage Rating  | Dielectric | Capacitance Range | Qty / Value | Total Qty   |  |
| 0603   | 50 VDC - 16 VDC | NPO, X7R   | 10pF to 0.22μF    | 50 pcs      | 1400 pcs    |  |

| 0805 Ceramic Chip Capacitor Kit                                      |                  |            |                   |             | P/N: S-0805 |  |
|--|------------------|------------|-------------------|-------------|-------------|--|
| 1400 piece sample assortment of selected values from 1.0pF to 0.47μF |                  |            |                   |             |             |  |
| Chip Size  | Voltage Rating   | Dielectric | Capacitance Range | Qty / Value | Total Qty   |  |
| 0805   | 100 VDC - 16 VDC | NPO, X7R   | 10pF to 0.47μF    | 50 pcs      | 1400 pcs    |  |

| TANCERAM® HIGH CAPACITANCE Ceramic Chip Capacitor Kit              |                  |            |                   |             | P/N: S-TAN-X5R |  |

# HIGH VOLTAGE SURFACE MOUNT MLCCs 250 - 6,000 VDC

These high voltage capacitors feature a special internal electrode design which reduces voltage concentrations by distributing voltage gradients throughout the entire capacitor.

This unique design also affords increased capacitance values in a given case size and voltage rating. The capacitors are designed and manufactured to the general requirement of EIA198 and are subjected to a 100% electrical testing making them well suited for a wide variety of telecommunication, commercial, and industrial applications.

## APPLICATIONS

- Analog & Digital Modems
- LAN/WAN Interface
- Lighting Ballast Circuits
- Voltage Multipliers
- DC-DC Converters
- Back-lighting Inverters

Polyterm® soft termination option for demanding environments & processes available on select parts, please contact the factory.

## ELECTRICAL CHARACTERISTICS

Meets the standard NP0 & X7R dielectric specifications listed on page 78

**DIELECTRIC WITHSTANDING VOLTAGE** DWV = 1.5 X rated WVDC for ratings 500-999 WVDC,  
DWV = 1.2 X rated WVDC for ratings ≥ 1,000 WVDC

NOTE: Capacitors may require a surface coating to prevent external arcing. Solder mask should not be used beneath capacitors. For more information see JDI Tech Note "Surface Arc Season"

Johanson Dielectrics Type SC ceramic chip capacitors are designed for AC voltage surge and lightning protection in line-to-ground interface applications in computer networks, modem, facsimile and other equipment.

Johanson's safety capacitor offering includes four different case sizes in NPO and X7R dielectric materials.

These devices are surface mount ready with barrier terminations and tape and reel packaging.

Information on capacitor safety ratings and certification details may be found below.

Polyterm® soft termination option for demanding environments & processes available on select parts, please contact the factory.

X Capacitors are defined as suitable for use in situations where failure of the capacitor would not lead to danger of electric shock.

Y Capacitors are defined as suitable for use in situations where failure of the capacitor could lead to danger of electric shock.

# X2Y® FILTER & DECOUPLING CAPACITORS

X2Y® filter capacitors employ a unique, patented low inductance design featuring two balanced capacitors that are immune to temperature, voltage and aging performance differences. These components offer superior decoupling and EMI filtering performance, virtually eliminate parasitics, and can replace multiple capacitors and inductors saving board space and reducing assembly costs.

## ADVANTAGES

- One device for EMI suppression or decoupling
- Replace up to 7 components with one X2Y
- Differential and common mode attenuation
- Matched capacitance line to ground, both lines
- Low inductance due to cancellation effect

## APPLICATIONS

- Amplifier Filter & Decoupling
- High Speed Data Filtering
- EMC I/O Filtering
- FPGA / ASIC /  $\mu$ -P Decoupling
- DDR Memory Decoupling

# X2Y® FILTER & DECOUPLING CAPACITORS

## THE X2Y® DESIGN - A BALANCED, LOW ESL, "CAPACITOR CIRCUIT"

The X2Y® capacitor design starts with standard 2 terminal MLC capacitor's opposing electrode sets, A & B, and adds a third electrode set (G) which surround each A & B electrode. The result is a highly versatile three node capacitive circuit containing two tightly matched, low inductance capacitors in a compact, four-terminal SMT chip.

### EMI FILTERING:

The X2Y® component contains two shunt or "line-to-ground" Y capacitors. Ultra-low ESL (equivalent series inductance) and tightly matched inductance of these capacitors provides unequalled high frequency Common-Mode noise filtering with low noise mode conversion. X2Y® components reduce EMI emissions far better than unbalanced discrete shunt capacitors or series inductive filters. Differential signal loss is determined by the cut off frequency of the single line-to-ground (Y) capacitor value of an X2Y®.

### POWER BYPASS / DECOUPLING

For Power Bypass applications, X2Ys® two "Y" capacitors are connected in parallel. This doubles the total capacitance and reduces their mounted inductance by 80% or 1/5th the mounted inductance of similar sized MLC capacitors enabling high-performance bypass networks with far fewer components and vias. Low ESL delivers improved High Frequency performance into the GHz range.

## GSM RFI ATTENUATION IN AUDIO & ANALOG

GSM handsets transmit in the 850 and 1850 MHz bands using a TDMA pulse rate of 217Hz. These signals cause the GSM buzz heard in a wide range of audio products from headphones to concert hall PA systems or "silent" signal errors created in medical, industrial process control, and security applications. Testing was conducted where an 840MHz GSM handset signal was delivered to the inputs of three different amplifier test circuit configurations shown below whose outputs were measured on a HF spectrum analyzer.

- 1) No input filter, 2 discrete MLC 100nF power bypass caps.
- 2) 2 discrete MLC 1nF input filter, 2 discrete MLC 100nF power bypass caps.
- 3) A single X2Y 1nF input filter, a single X2Y 100nF power bypass cap.

X2Y configuration provided a nearly flat response above the ambient and up to 10 dB improved rejection than the conventional MLCC configuration.

## AMPLIFIER INPUT FILTER EXAMPLE

In this example, a single Johanson X2Y® component was used to filter noise at the input of a DC instrumentation amplifier. This reduced component count by 3-to-1 and costs by over 70% vs. conventional filter components that included 1% film Y-capacitors.

| Parameter             | X2Y®<br>10nF  | Discrete<br>10nF, 2 @ 220 pF | Comments          |
|-----------------------|---------------|------------------------------|-------------------|
| DC offset shift       | < 0.1 $\mu$ V | < 0.1 $\mu$ V                | Referred to input |
| Common mode rejection | 91 dB         | 92 dB                        |                   |

## COMMON MODE CHOKE REPLACEMENT

- Superior High Frequency Emissions Reduction
  - Smaller Sizes, Lighter Weight
  - No Current Limitation
  - Vibration Resistant
  - No Saturation Concerns
- See our website for a detailed application note with component test comparisons and circuit emissions measurements.

## Measured Common Mode Rejection

## PARALLEL CAPACITOR SOLUTION

A common design practice is to parallel decade capacitance values to extend the high frequency performance of the filter network. This causes an unintended and often over-looked effect of anti-resonant peaks in the filter networks combined impedance. X2Y's very low mounted inductance allows designers to use a single, higher value part and completely avoid the anti-resonance problem. The impedance graph on right shows the combined impedance of a 1nF, 10nF & 100nF MLC in parallel in RED. The MLC networks anti-resonance peaks are nearly 10 times the desired impedance. A 100nF and 47nF X2Y are plotted in BLUE and GREEN. (The total capacitance of X2Y (Circuit 2) is twice the value, or 200nF and 98nF in this example.) The single X2Y is clearly superior to the three paralleled MLCs.

## Decade MLCs vs X2Y Impedance

## X2Y HIGH PERFORMANCE POWER BYPASS - IMPROVE PERFORMANCE, REDUCE SPACE & VIAS

Actual measured performance of two high performance SerDes FPGA designs demonstrate how a 13 component X2Y bypass network significantly out performs a 38 component MLC network.

# LOW INDUCTANCE CHIP CAPACITORS (LICC)

LICC capacitors are specially designed to exhibit lower inductance by altering the aspect ratio of the terminations. The smaller current loop length results in Equivalent Series Inductance (ESL) that is typically 60% lower than standard MLCs of the same size. This ESL improvement is extremely advantageous in the high frequency power decoupling of high speed digital MPU, FPGA, DSP, etc..

## FEATURES

- Low Inductance
- High Series Resonant Frequency
- Sn-Pb and Polyterm® Termination Options
- Surface Mount
- Small Size
- RoHS Compliant

# CHIP FILTER / FEED-THRU CAPACITORS

Our Feed-Thru Capacitors provide excellent EMI, I/O & Power Line filtering exhibiting much lower inductance than standard SMT capacitors which results in broader frequency response. These are Precious Metal Electrode (PME) products with higher current ratings than comparable Base Metal Electrode (BME) parts.

## FEATURES

- 1 Amp Current Rating
- Low Inductance, High SRF
- Surface Mount Non-polarized
- Sn-Pb and Polyterm® Options

## APPLICATIONS

- DC Power Line EMI Filter
- RF Immunity Filter
- RF Amplifier Gain Filter

## Insertion Loss vs Frequency

# HIGH TEMPERATURE SURFACE MOUNT MLCCs 200°C

Johanson's high temperature MLCC series exhibit stable performance across an extended operating temperature range of -55°C to +200°C. Both Class I and Class II parts are available with DC voltage ratings of 50, 100 and 200V satisfying a wide range of demanding applications.

## FEATURES

- Stable 200°C Operation
- Compact SMD Chip
- Polyterm® Termination Option
- Sn-Pb Termination Option

## APPLICATIONS

- Deep Hole Drilling Electronics
- High Temperature Modules
- Industrial Equipment
- Automotive • Avionics

TANCERAM® chip capacitors can replace tantalum capacitors in many applications and offer several key advantages over traditional tantalums. Because TANCERAM® capacitors exhibit extremely low ESR, equivalent circuit performance can often be achieved using considerably lower capacitance values. Low DC leakage reduces current drain, extending the battery life of portable products. TANCERAM® high DC breakdown voltage ratings offer improved reliability and eliminate large voltage de-rating common when designing with tantalums.

## ADVANTAGES

- Low ESR
- Higher Surge Voltage
- Reduced CHIP Size
- Higher Insulation Resistance
- Low DC Leakage
- Non-polarized Devices
- Improved Reliability
- Higher Ripple Current

## APPLICATIONS

- Switching Power Supply Smoothing (Input/Output)
- DC/DC Converter Smoothing (Input/Output)
- Backlighting Inverters
- General Digital Circuits

Typical ESR Comparison

Typical Breakdown Voltage Comparison

## HOW TO ORDER TANCERAM®

Part number written: 100R15X106MV4E

**100**

### VOLTAGE

6R3 = 6.3 V  
100 = 10 V  
160 = 16 V  
250 = 25 V  
500 = 50 V  
101 = 100 V

**R15**

### SIZE

See Chart

**X**

### DIELECTRIC

W = X7R  
X = X5R

**106**

### CAPACITANCE

1st two digits are significant; third digit denotes number of zeros.  
105 = 1.00 µF  
476 = 47.0 µF  
107 = 100 µF

**M**

### TOLERANCE

K = ±10%  
M = ±20%

**V**

### TERMINATION

V = Nickel Barrier with 100% Tin Plating (Matte)

T = SnPb\*  
(\*available on select parts)

**4**

### MARKING

4 = Unmarked

**E**

### PACKING

Code Type Reel  
E Plastic 7"  
T Paper 7"  
Tape specifications conform to EIA RS481

# STACKED SMPS CERAMIC CAPACITORS

Stacked Switch-Mode ceramic capacitors feature large capacitance values and exhibit low ESR (equivalent series resistance) and low ESL (equivalent series inductance) making them well suited for high power and high frequency applications where tantalum or aluminum electrolytic capacitors may not be suitable. The P-Series feature mechanical and pin-out configurations per DSCC 87106 and 88011 drawings while the E-Series feature mechanical and pin-out configurations more common in European design applications.

## KEY FEATURES

- P-Series Approved to DSCC Drawings 87106 & 88011 MIL-PRF-49470
- New T-Series 200°C for downhole tools and aircraft engine control applications.
- E-Series Common European Lead Styles available to MIL-PRF-49470 requirements.
- NP0 & X7R Dielectrics, 50 to 500 VDC Ratings
- Low ESR / Low ESL, Ideal for SMPS Filtering Applications
- Custom Sizes, Voltages, and Values Available

# MINI-SWITCH-MODE® CAPACITORS

JDI's Mini Switch-Mode® ceramic capacitors combine the advantages of high capacitance found in tantalum capacitors with very low ESR performance of ceramic capacitors. The “J” and “L” lead configurations replace 1825 and 2225 SMT chips to provide stress relief and prevent cracking due to thermal cycling or mechanical board flexing. Another plus of the J-lead style is that this configuration allows use of the same solder lands as the SMT chips. See the Stacked Switch-Mode section for larger values. See also the Technical Notes on soldering and handling and suggested solder lands.

## FEATURES

- High Capacitance, Small Size
- Low ESR/ESL
- Leadframe reduces thermal & mechanical stress due to board flexure and TCE mismatch

## APPLICATIONS

- DC-DC Converters
- Power Supply Input & Output Filters

## CAPACITANCE SELECTION

| SIZE CODE | EIA CHIP SIZE | NP0 Max Capacitance (uF) |       |       |       |       | X7R Max Capacitance (uF) |     |      |      |      |

# BME MINI-SWITCH-MODE® CAPACITORS

This new series of miniature switchmode power supply filter capacitors uses BME (Base Metal Electrode) construction to achieve 300-400% capacitance increases and component size reductions compared to their PME (Precious Metal Electrode) counterparts per the comparison examples below.

## BME Size / Capacitance Comparison

| Technology | Chips          | Volts       | Max. Cap.                   |
|------------|----------------|-------------|-----------------------------|
| PME        | 1x 1825        | 50V         | 1.2 $\mu$ F                 |
| <b>BME</b> | <b>1x 1812</b> | <b>50V</b>  | <b>4.7<math>\mu</math>F</b> |
| PME        | 2x 2225        | 100V        | 4.4 $\mu$ F                 |
| <b>BME</b> | <b>2x 2220</b> | <b>100V</b> | <b>10<math>\mu</math>F</b>  |

## FEATURES

- High Capacitance, Small Size
- Low ESR/ESL
- Leadframe reduces thermal & mechanical stress due to board flexure and TCE mismatch
- Green / ROHS Compliant

## APPLICATIONS

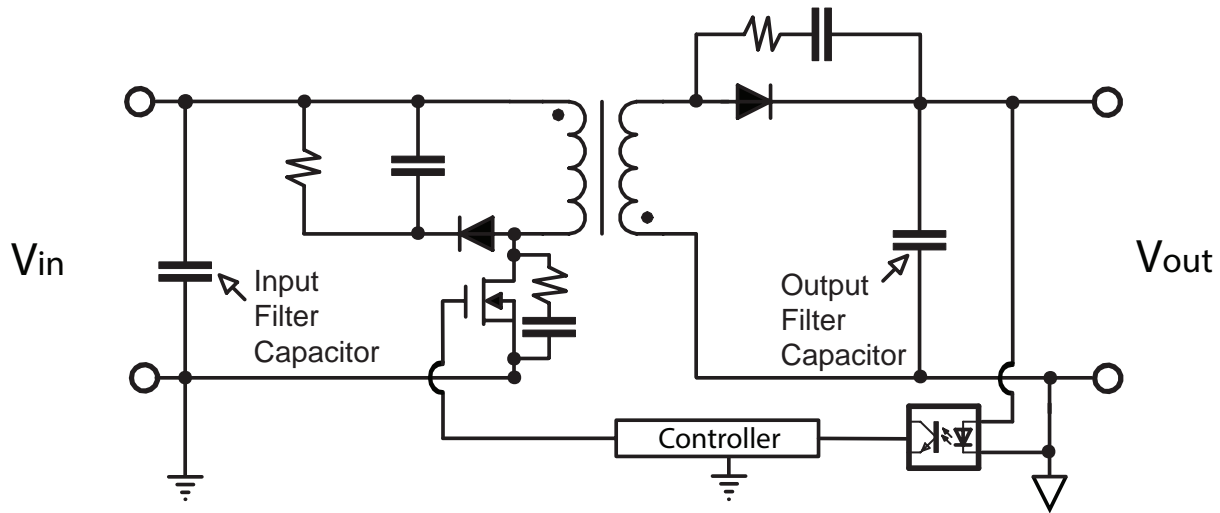

- DC-DC Converters
- Power Supply Input & Output Filters
- High Capacitance Applications Where Increased Reliability is Required

# SWITCH-MODE RADIAL LEADED CAPACITORS

## KEY FEATURES

- Rated Working Voltages from 25 to 500 VDC
- Rugged Epoxy Coating Offers Increased Protection
- Hi-Rel Screened Versions Available
- Custom Sizes, Voltages, and Values Available

## ADVANTAGES

- Power Supplies
- Voltage Multipliers
- Data Isolation
- Surge Protection
- Industrial Control Circuits
- Custom Applications

RoHS available on request.

# HIGH VOLTAGE RADIAL LEADED CAPACITORS

## KEY FEATURES

- Rated Working Voltages from 500 to 5000 VDC
- Rugged Epoxy Coating Offers Increased Protection
- Compact MLC Designs Smaller Than Film or Disc
- NEW 200°C Versions Available for Oil & Geophysical Tool, Aircraft Engine Control Applications
- DSCC Drawing & Other Screened Versions Available

## ADVANTAGES

- Power Supplies
- Voltage Multipliers
- Data Isolation
- Surge Protection
- Industrial Control Circuits
- Custom Applications

## T-SERIES 200°C

Johanson also offers two different series of high temperature radial leaded capacitors for 200°C. These components feature rugged premolded cases with Hi-Temp epoxy fill. The 200°C line is offered in voltage ratings of 25V to 4KV and maximum capacitance loss of -0.5% in NP0 and -45% in X7R. The line is offered in voltage ratings of 50V & 100V with maximum capacitance loss of -1.5% in NP0 and -55% in X7R. Please visit our website for complete component selection & specifications

### APPLICATIONS

- Oil Well Logging (Downhole)
- Geophysical Probes
- Jet Engine Controls

NOTE: Lead lengths are typically 1.25" for orders in bulk packaging. Leads are typically 1.00" for tape and reel packaging. Tape and reel packaging comes in 1000 piece reels.

## HOW TO ORDER HIGH VOLTAGE RADIALS

# RESISTOR WIREWOUND PRECISION

## RWP SERIES

### KEY FEATURES

- Temperature Coefficients of  $\pm 2\text{ppm}/^\circ\text{C}$
- Temperature Range  $-55^\circ\text{C}$  to  $+145^\circ\text{C}$
- Resistance to 6 Mega-Ohms
- Resistance Tolerance starting at  $\pm 0.005\%$
- Long Term Stability / 100ppm/year
- High TCR Available - Platinum & Balco Wire
- Matched Resistance Sets to  $\pm 0.001$  and  $\pm 0.5\text{ppm}/^\circ\text{C}$
- 100% Acceptance Tested
- Options available: Wide TCR Range, High Stability and Fast Rise Time

### APPLICATIONS

- Smart Grid Metering
- Engine Sensors
- Power Inverters
- Temperature Sensors

### PRODUCT SUMMARY

| PRODUCT SERIES (RWP) | RESISTANCE ( $\Omega$ ) | POWER RATING (W) | TOLERANCE <sup>1</sup> | TEMPERATURE COEFFICIENT   | TEMPERATURE RANGE <sup>1</sup>              |
|----------------------|-------------------------|------------------|------------------------|---|---|
| Radial               | Up to 1M                | 0.125 to 0.500   | $\pm 0.005\%$ to 1%    | <ul style="list-style-type: none"> <li>• <math>&gt;100\Omega</math> : <math>\pm 10\text{ppm}/^\circ\text{C}</math></li> <li>• <math>10\Omega</math> to <math>100\Omega</math> : <math>\pm 20\text{ppm}/^\circ\text{C}</math></li> <li>• <math>&lt;10\Omega</math> : <math>\pm 30\text{ppm}/^\circ\text{C}</math></li> </ul> | $-55^\circ\text{C}$ to $+145^\circ\text{C}$ |
| Axial                | Up to 6M                | 0.06 to 2.00     |                        |   |   |

### AVAILABLE OPTIONS (Consult Factory)

- **Wide TCR Range:** Low and High TC configurations from  $-20\text{ppm}/^\circ\text{C}$  to  $+6000\text{ppm}/^\circ\text{C}$ . Down to  $1\text{ppm}/^\circ\text{C}$  available.
- **High Stability:** High stability version with maximum resistance change of  $\pm 20\text{ppm}/\text{year}$  under normal conditions.
- **Fast Rise Time:** Low reactance design for fast rise time and extended frequency response.
- **Special Testing Requirements**
- **Special Pulse Requirements**

<sup>1</sup> See Power Derating Curve

### HOW TO ORDER

# RESISTOR WIREWOUND PRECISION SMT

## RWF SERIES

### KEY FEATURES

- Resistance from 0.005 to 50kOhms
- Precision, Flame Proof and Pulse Withstanding
- Tolerance to  $\pm 0.01\%$
- High Power to 4 Watts
- Flame Resistant UL 94V-0
- Superior Surge Handling Capability
- High Temperature Rating up to 275°
- Low Temperature Coefficient to  $\pm 20\text{ppm}/^\circ\text{C}$
- Non-Inductive Windings available

### APPLICATIONS

- Motor Control
- Braking Systems
- Power Supplies
- Pressure Transducers

### PRODUCT SUMMARY

#### Humidity Packaging Notes:

Moisture Barrier Bags (MBB) are used to package surface mount components. These bags include a desiccant and a Humidity Indicator Card to monitor humidity levels. All bags are marked with Moisture-Sensitive Identification Labels.

A Moisture Sensitivity Level (MSL) rating of 2 (1-year floor life) applies to the Johanson RWF Series.

This datasheet is subject to change without notice.

# RESISTOR WIREWOUND HIGH POWER RATING

## RWH SERIES

### KEY FEATURES

- Excellent Pulse Handling
- Resistance Tolerances to  $\pm 0.01\%$
- Resistance from 0.02 to 260kOhms
- MIL-R-26 / MIL-R-39007 Power Ratings
- Low TCR:  $\pm 20\text{ppm}/^\circ\text{C}$  Standard
- Non-Inductive Windings available

### APPLICATIONS

- HDVC Systems
- Braking Systems
- Power Supplies
- Fluid Heater

### PRODUCT SUMMARY

| PRODUCT SERIES (RWH) | POWER RATING (W) | DIELECTRIC STRENGTH                                     | TOLERANCE   | TEMPERATURE COEFFICIENT   | TEMPERATURE RANGE                            |

#### CONSTRUCTION NOTES:

- ♦ Centerless ground ceramic core
- ♦ Tinned copper or copperweld leads
- ♦ All welded terminations
- ♦ High Temperature / trivalent / inorganic silicone coating

# RESISTOR WIREWOUND CHASSIS MOUNT

## RWC SERIES

### KEY FEATURES

- Resistances from 0.005 to 250kOhms
- Tolerance to  $\pm 0.01\%$
- High Temperature:  $-55^{\circ}\text{C}$  to  $+275^{\circ}\text{C}$
- Low TCR:  $\pm 20\text{ppm}/^{\circ}\text{C}$
- Power Rating 5 to 300 Watts
- Excellent Pulse Handling
- Non-Inductive windings available
- Four Terminal Versions Available (Call Factory)

### APPLICATIONS

- Motor Control
- Braking Systems
- Welding
- X-Ray

### PRODUCT SUMMARY

## ENVIRONMENTAL PERFORMANCE

| Environmental Performance (MIL-STD 202) | $\Delta R$                 |
|---|----------------------------|
| Vibration                               | $\pm 0.1 \% + 0.05 \Omega$ |
| Load Life                               | $\pm 1\% + 0.05 \Omega$    |
| Moisture Resistance                     | $\pm 0.2 \% + 0.05 \Omega$ |
| Dielectric                              | $\pm 0.2 \% + 0.05 \Omega$ |
| Storage                                 | $\pm 0.2 \% + 0.05 \Omega$ |
| Shock                                   | $\pm 0.1 \% + 0.05 \Omega$ |
| Thermal Shock                           | $\pm 0.2 \% + 0.05 \Omega$ |
| 5X Overload (5s)                        | $\pm 0.2 \% + 0.05 \Omega$ |

### CONSTRUCTION NOTES:

- ◆ Centerless ground ceramic core
- ◆ Tinned copper or copperweld leads
- ◆ All welded terminations
- ◆ High Temperature epoxy molding compound
- ◆ Anodized aluminum housing

Moisture Sensitivity Level: MSL-1

This datasheet is subject to change without notice.

# RESISTOR THIN FILM PRECISION RNP SERIES

## KEY FEATURES

- Resistances from 1 Ohm to 3M Ohms
- Resistance Tolerances to  $\pm 0.01\%$
- Power Rating 0.06 to 0.75 watts
- TCR's up to  $\pm 5\text{ppm}/^\circ\text{C}$
- Operating Temperature:  $-55^\circ\text{C}$  to  $155^\circ\text{C}$
- Available in sizes 0402, 0603, 0805, 1206, 2010, 2512

## APPLICATIONS

- Motor Control
- Precision Scales
- Smart Grid Metering
- Temperature Sensors

## PRODUCT SUMMARY

|                                     | $\Delta R \pm 0.2\%$<br>(For High Power Rating) |                       |  |

Moisture Sensitivity Level: MSL-1

This datasheet is subject to change without notice.

# RESISTOR METAL ELEMENT CURRENT SENSE SMT

## RNC SERIES

### KEY FEATURES

- Resistances from 0.5 mOhms to 15 mOhms
- Resistance Tolerances to  $\pm 1\%$
- Customized Resistance available
- Power Rating up to 3 Watts
- TCR's to  $\pm 50$  ppm/°C
- Available in sizes 1206 / 2010 / 2512

### APPLICATIONS

- Engine Sensors
- Surge Protection
- Data Recorders
- Temperature Sensors

### PRODUCT SUMMARY

| PRODUCT SERIES (RNC) | PACKAGE SIZE | POWER RATING (W) at 80°C | RESISTANCES (mΩ)                         | TCR (ppm/°C)                   | TOLERANCES     | TEMPERATURE RANGE |
|----------------------|--------------|--------------------------|--|--------------------------------|----------------|-------------------|
| RNC18A               | 1206         | 1                        | 0.5 - 10                                 | $\pm 50$<br>$\pm 200$ (0.5 mΩ) | 1%<br>3%<br>5% | -55°C to +170°C   |

This datasheet is subject to change without notice.

# RESISTOR HIGH POWER LOW INDUCTANCE

## RHX SERIES

### KEY FEATURES

- Resistances from 51k Ohms
- High Stability Film Resistance Elements
- Rated Power of 35, 50 and 100 Watts
- TO-220 and TO-247 Housing
- Resistance tolerance of  $\pm 0.1\%$  or  $\pm 1\%$
- Low Inductance of  $< 10\text{nH}$  for RHXH1 and RHXH2,  $< 50\text{nH}$  for RHXH3

### APPLICATIONS

- Power Inverters
- Engine Sensors
- Power Supplies
- Temperature Sensors

### PRODUCT SUMMARY

Tin/Lead coated leads, add "- Pb" on part number.

Standard Termination Finish: Matte Tin (Sn)

Example P/N: RHXH2Q038K0F4 is Resistor High Power Low Inductance, 50W TO-220,  $\pm 50\text{ppm}/^\circ\text{C}$ , 38.0K $\Omega$ ,  $\pm 1.0\%$ , tube

# RESISTOR HIGH POWER LOW INDUCTANCE

## RHX SERIES

### ENVIRONMENTAL CHARACTERISTICS

| Electrical Characteristics | RHXH1 & RHXH2 Values                                      | RHXH3 Value   |
|----------------------------|---|---|
| Maximum Current            | 25A   | -   |
| Inductance                 | <10nH ( At the Standoff )                                 | -   |
| Insulation Resistance      | >1000 Megohm  | >1000 Megohm  |
| Dielectric Strength        | 2000 VAC  | 2500 VAC  |
| Temperature Range          | -55°C to +155°C   | -55°C to +155°C   |
| Maximum Working Voltage    | $\sqrt{\text{Power} \times \text{Resistance}}$ (500V MAX) | 700 V or $\sqrt{\text{Power} \times \text{Resistance}}$ , whichever is less |

**Power Derating Curve**

#### RHXH1 & RHXH2 POWER RATING NOTES:

- ◆ H1 and H2 High Power Low Inductance Resistors must be attached to a suitable heatsink. Without a heatsink, the maximum power rating is 1W.
- ◆ The maximum internal resistor temperature is 155°C.
- ◆ Use the following formula to specify an appropriate heatsink:

#### RHXH3 POWER RATING NOTES:

- ◆ H3 High Power Low Inductance Resistors must be attached to a suitable heatsink.
- ◆ The maximum internal resistor temperature is 155°C.
- ◆ Use the following formula to specify appropriate heatsink:

$$R_{\theta H} = \frac{T_{MAX} - (P * R_{\theta R}) - T_A}{P}$$

Where:  $R_{\theta H}$  = Thermal Resistance of Heatsink ( °C/W )  
 $R_{\theta R}$  = Thermal Resistance of Resistor ( °C/W )  
 $T_{MAX}$  = Maximum Temperature of Resistor ( °C )  
 $T_A$  = Ambient Temperature of Heatsink ( °C )  
 $P$  = Power Through Resistor ( W )

# RESISTOR HIGH POWER LOW INDUCTANCE

## RHX SERIES

### MECHANICAL CHARACTERISTICS

**RHXH1 & RHXH2**

**MOUNTING NOTES:**

- ♦ H1 and H2 High Power Low Inductance Resistors must be attached to a suitable heatsink.
- ♦ Use thermal grease to mount resistor to a clean, flat surface.
- ♦ Use a compression washer to provide 150 to 300 pounds ( 665 to 1330N ) of mounting force.
- ♦ Torque mounting screw to 8 in-lbs ( 0.9 N-m ).
- ♦ Mounting tab is isolated from both pins.

**RHXH3**

**MOUNTING NOTES:**

- ♦ H3 High Power Low Inductance Resistors must be attached to a suitable heatsink.
- ♦ Use thermal grease to mount resistor to a clean, flat surface.
- ♦ Use a compression washer to provide 150 to 300 pounds ( 665 to 1330N ) of mounting force.
- ♦ Torque mounting screw to 8 in-lbs ( 0.9 N-m ).
- ♦ Back plate is isolated from both pins.

# RESISTOR HIGH POWER LOW INDUCTANCE RHX SERIES

## PULSE ENERGY CAPABILITY

This datasheet is subject to change without notice.

# RESISTOR THICK FILM, HIGH TEMPERATURE

## RKS SERIES

### KEY FEATURES

- Resistances from 10M to 1TOhms
- Resistance Tolerances to  $\pm 0.25\%$
- Power Rating 0.05 to 2 Watts
- Non-Magnetic
- TCR's to  $\pm 25\text{ppm}/^\circ\text{C}$
- Special High Temperature Version to  $300^\circ\text{C}$
- High Value Thick Film Resistance Element
- Available in sizes 0420, 0603, 0805, 1206, 1210, 2512, 4020

### APPLICATIONS

- Engine Sensors
- Data Recorders
- Surge Protection
- Temperature Sensors

### PACKAGING INFORMATION

Bulk or Blister tape to IEC 60286-3

- ♦ Tape width 8mm / Reel Diameter 180 or 330mm
- ♦ Minimum quantity Bulk / 100 pieces per value (30 pieces per value for sizes 4020 and 2512)
- ♦ Minimum quantity Tape & Reel / 500 pieces per value  
(Note: Except size 0402 / 1000 pieces per value)

Moisture Sensitivity Level: MSL-1

This datasheet is subject to change without notice.

# RESISTOR METAL ELEMENT CURRENT SENSE

## RMC SERIES

### KEY FEATURES

- Resistances from 0.005 to 0.100 Ohms
- Low Inductance (<10nH)
- Tolerances to  $\pm 1\%$
- Resistance Wire TCR:  $\pm 20\text{ppm}/^\circ\text{C}$
- For Current Sensing and Shunt Applications
- All Welded Construction
- Economical Bare Metal Element

### APPLICATIONS

- Base Station
- Power Inverters
- Current Sensing
- Lightning Pulse Survival

### PRODUCT SUMMARY

| PRODUCT SERIES (RMC) | POWER RATING @ 85°C (W) | RESISTANCE ( $\Omega$ ) <sup>1</sup>                   | TOLERANCES            |

# RESISTOR POWER THIN FILM

## RHF SERIES

### KEY FEATURES

- Resistances from 0.01 Ohm to 51K Ohms
- Low Stability to 1%
- Resistance Tolerances to  $\pm 1\%$
- TCR to  $\pm 50\text{ppm}/^\circ\text{C}$
- Power Rating to 35 Watt
- Solder Reflow Secure at  $260^\circ\text{C} / 20\text{s}$
- TO-263 Housing (D-Pak)
- Isolated Back Plate

### APPLICATIONS

- Power Inverters
- Braking Systems
- Lighting (LED)
- Power Supplies

### PRODUCT RANGE SUMMARY

| POWER RATING <sup>1</sup><br>(with heatsink) | RESISTANCE RANGE ( $\Omega$ ) | TEMPERATURE COEFFICIENT             | TOLERANCE RANGE <sup>2</sup> | OPERATING TEMPERATURE RANGE                   |

Moisture Sensitivity Level: MSL-1

# RESISTOR POWER THIN FILM

## RHF SERIES

### POWER RATING NOTES:

- ♦ RHF Resistors must be attached to a suitable heatsink.
- ♦ The maximum internal resistor temperature is 175°C.
- ♦ Use the following formula to specify appropriate heatsink:

$$R_{\theta H} = \frac{T_{MAX} - (P * R_{\theta R}) - T_A}{P}$$

Where:  $R_{\theta H}$  = Thermal Resistance of Heatsink ( K/W )  
 $R_{\theta R}$  = Thermal Resistance of Resistor ( K/W )  
 $T_{MAX}$  = Maximum Temperature of Resistor ( °C )  
 $T_A$  = Ambient Temperature of Heatsink ( °C )  
 $P$  = Power Through Resistor ( W )

Power Derating Curve

Load life test will be necessary in actual equipment

This datasheet is subject to change without notice.

# POWER INDUCTORS, SEMI-SHIELDED (COATED) LPC SERIES

The Semi-shielded Power Inductor LPC Series are low profile and high current power inductors. Several dimensions are offered.

### KEY FEATURES

- High Current Performance
- Small and Low Profile Inductors
- Magnetic shielding
- Available for automatic mounting in tape and reel package

### APPLICATIONS

- DC/DC Converter
- Power Supplies
- Industrial
- Data Storage Devices
- Consumer Electronics

### PRODUCT RANGE SUMMARY

| SIZE CODE | INDUCTANCE RANGE     | RATED CURRENT RANGE<br>BASED ON<br>INDUCTANCE CHANGE | RATED CURRENT RANGE<br>BASED ON<br>TEMPERATURE RISE | DC RESISTANCE RANGE             | OPERATING TEMPERATURE RANGE <sup>1</sup> |
|-----------|----------------------|--|---|---------------------------------|--|
| 2410      | 0.68 - 22.0 $\mu$ H  | 0.40 - 2.60 A  | 0.40 - 2.50 A                                       | 60 m $\Omega$ - 1470 m $\Omega$ | -25°C to +120°C                          |
| 3010      | 1.00 - 100.0 $\mu$ H | 0.15 - 2.30 A  | 0.18 - 2.30 A                                       | 50 m $\Omega$ - 5.00 $\Omega$   | -40°C to +125°C                          |
| 3012      | 1.00 - 47.0 $\mu$ H  | 0.23 - 1.90 A  | 0.35 - 1.71 A                                       | 45 m $\Omega$ - 1250 m $\Omega$ |  |
| 3015      | 1.00 - 100.0 $\mu$ H | 0.25 - 2.30 A  | 0.30 - 2.30 A                                       | 28 m $\Omega$ - 2100 m $\Omega$ |  |
| 4018      | 0.82 - 220.0 $\mu$ H | 0.30 - 4.70 A  | 0.28 - 4.00 A                                       | 16 m $\Omega$ - 2960 m $\Omega$ |  |
| 4025      | 1.00 - 220.0 $\mu$ H | 0.20 - 3.00 A  | 0.20 - 3.00 A                                       | 12 m $\Omega$ - 2300 m $\Omega$ |  |
| 5040      | 1.50 - 47.0 $\mu$ H  | 1.10 - 6.00 A  | 0.90 - 3.60 A                                       | 15 m $\Omega$ - 270 m $\Omega$  |  |
| 6045      | 1.00 - 220.0 $\mu$ H | 0.55 - 8.60 A  | 0.50 - 6.50 A                                       | 10 m $\Omega$ - 920 m $\Omega$  |  |

Consult Factory for values not listed in the product range

<sup>1</sup> Including self-generated heat

TEST FREQUENCY: 100KHz, 1V

STORAGE TEMPERATURE: -10°C to +40°C, humidity 30 to 70% R.H.

MOISTURE SENSITIVITY LEVEL: MSL - 1

Electrical Schematic: No Polarity

\*1. Idc1: Based on inductance change ( $\Delta L/L_0$ :  $\leq$  -30%)  
 \*2. Idc2: Based on temperature rise ( $\Delta T$ : 40°C TYP.)

Notes: Inductance is measured in HP-4285A Precision LCR Meter.  
 RDC measured in DU-5011 milli ohm meter (or equivalent).

### ENVIRONMENTAL PERFORMANCE

|                                | SPECIFICATION   | TEST PARAMETERS   |
|--------------------------------|---|---|
| VIBRATION                      | $\Delta L/L_0 : \leq \pm 10\%$<br>There shall be no mechanical damage                       | Solder specimen inductor on the test printed circuit board. Apply vibrations in each of the x, y and z directions for 2 hours for a total of 6 hours.<br>Frequency : 10 to 50 Hz    Amplitude : 1.5mm   |
| SOLDERABILITY                  | The metalized area must have 90% minimum solder coverage.                                   | Dip pads in flux and dip in solder pot (NP303) at $240^\circ\text{C} \pm 5^\circ\text{C}$   |
| HIGH TEMPERATURE RESISTANCE    | $\Delta L/L_0 : \leq \pm 10\%$<br>There shall be no mechanical damage or electrical damage. | The sample shall be left for 96 hours in an atmosphere with a temperature of $85 \pm 2^\circ\text{C}$ and a normal humidity. Upon completion of the test, the measurement shall be made after the sample has been left in a normal temperature and normal humidity for 1 hour.                        |
| LOW TEMPERATURE                | $\Delta L/L_0 : \leq \pm 10\%$<br>There shall be no mechanical damage or electrical damage. | The sample shall be left for 96 hours in an atmosphere with a temperature of $-30 \pm 2^\circ\text{C}$ . Upon completion of the test, the measurement shall be made after the sample has been left in a normal temperature and normal humidity for 1 hour.  |
| MOISTURE STORAGE               | $\Delta L/L_0 : \leq \pm 10\%$<br>There shall be no mechanical damage                       | The sample shall be left for 96 hours in a temperature of $40 \pm 2^\circ\text{C}$ and a humidity(RH) of 90~95%. Upon completion of the test, the measurement shall be made after the sample has been left in a normal temperature and normal humidity more than 1 hour.                              |
| SUBSTRATE BENDING              | $\Delta L/L_0 : \leq \pm 10\%$<br>There shall be no mechanical damage or electrical damage  | The sample shall be soldered onto the printed circuit board and a load applied until the figure in the arrow direction is made approximately 3mm (keep time $5 \pm 1$ seconds).   |
|                                |   | <p style="text-align: center;">PRESSURE ROD</p>   |
| THERMAL SHOCK                  | $\Delta L/L_0 : \leq \pm 10\%$<br>There shall be no damage or problems.                     | The sample shall be subject to 5 continuous cycles, such as shown in the following temperature cycle. Measure the test items after leaving the inductors at room temperature and humidity for 1 hour.   |
|                                |   |   |
| COMPONENT ADHESION (PUSH TEST) | 10N Min (LPC 2410, 3010)<br>12N Min (LPC 3012, 3015, 4018, 4025, 5040, 6045)                | The device should be reflow soldered ( $245 \pm 5^\circ\text{C}$ for 10 seconds) to a copper substrate a dynamometer force gauge should be applied to the side of the component the device must withstand a minimum force of 10N or 12N without failure of the termination attached to the component. |

#### RECOMMENDED SOLDER ATTACHMENT: REFLOW SOLDERING

Reflow: 2 times max  
 Peak Temperature: 255°C  
 Max Time Above 217°C: 90 sec max

#### If hand soldering must be used, follow these precautions:

Use solder iron of less than 30W when soldering.  
 Do not allow soldering iron tip to directly touch the ferrite body outside of the terminal electrode.  
 2 seconds maximum at 280°C.

# POWER INDUCTORS, SHIELDED

## LPM SERIES

The Shielded Power LPM Series are low profile, surface-mount inductors. They are designed for power applications or high current applications.

### KEY FEATURES

- High reliability and easy surface mount assembly
- Low loss due to design of low DC resistance
- Low profile with max thickness 3.0 mm
- Frequency Application Up to 3MHz
- Suitable for reflow soldering
- 100% Lead Free

### APPLICATIONS

- Low profile and high current power supplies
- DC/DC Converters

### PRODUCT RANGE SUMMARY

| SIZE CODE | INDUCTANCE RANGE    | RATED CURRENT RANGE<br>BASED ON<br>INDUCTANCE CHANGE | RATED CURRENT RANGE<br>BASED ON<br>TEMPERATURE RISE | DC RESISTANCE RANGE<br>(TYPICAL)     | OPERATING TEMPERATURE RANGE |
|-----------|---------------------|--|---|--------------------------------------|-----------------------------|
| 0520      | 1.00 - 10.0 $\mu$ H | 2.10 - 8.00 A  | 2.30 - 7.50 A                                       | 16.80 m $\Omega$ - 140.00 m $\Omega$ | -55°C to +125°C             |
| 0530      | 0.60 - 5.6 $\mu$ H  | 4.00 - 18.00 A                                       | 4.00 - 9.80 A                                       | 11.00 m $\Omega$ - 55.00 m $\Omega$  |                             |
| 0630      | 0.47 - 22 $\mu$ H   | 2.50 - 20.50 A                                       | 2.50 - 16.50 A                                      | 3.50 m $\Omega$ - 152.00 m $\Omega$  |                             |

### ENVIRONMENTAL PERFORMANCE

|                          | SPECIFICATION  | TEST PARAMETERS  |
|--------------------------|--|--|
| VIBRATION                | $\Delta L/L_0 : \leq \pm 5\%$<br>There shall be no mechanical damage                       | Solder specimen inductor on the test printed circuit board. Apply vibrations in each of the x, y and z directions for 2 hours for a total of 6 hours.<br>Frequency : 10~55~10Hz in 60sec as a period    Amplitude : 1.5mm                                    |
| SOLDERABILITY            | The metalized area must have 90% minimum solder coverage.                                  | Preheating at 160±10°C 90sec.<br>245°C ±5°C for 2 ±1sec.   |
| HIGH TEMPERATURE STORAGE | $\Delta L/L_0 : \leq \pm 5\%$<br>There shall be no mechanical damage or electrical damage. | The sample shall be left for 96 hours in an atmosphere with a temperature of 85±2°C and a normal humidity. Upon completion of the test, the measurement shall be made after the sample has been left in a normal temperature and normal humidity for 1 hour. |
| LOW TEMPERATURE STORAGE  | $\Delta L/L_0 : \leq \pm 5\%$<br>There shall be no mechanical damage or electrical damage. | The sample shall be left for 96 hours in an atmosphere with a temperature of -40±2°C. Upon completion of the test, the measurement shall be made after the sample has been left in a normal temperature and normal humidity for 1 hour.                      |
| MOISTURE STORAGE         | $\Delta L/L_0 : \leq \pm 5\%$<br>There shall be no mechanical damage                       | The sample shall be left for 96 hours in a temperature of 40±2°C and a humidity(RH) of 90~95%. Upon completion of the test, the measurement shall be made after the sample has been left in a normal temperature and normal humidity more than 1 hour.       |
| SUBSTRATE BENDING        | $\Delta L/L_0 : \leq \pm 5\%$<br>There shall be no mechanical damage or electrical damage  | The sample shall be soldered onto the printed circuit board and a load applied until the figure in the arrow direction is made approximately 2mm (keep time 5 ±1 seconds).   |
| THERMAL SHOCK            | $\Delta L/L_0 : \leq \pm 5\%$<br>There shall be no damage or problems.                     | The sample shall be subject to 10 continuous cycles, such as shown in the following temperature cycle. Measure the test items after leaving the inductors at room temperature and humidity for 1 hour.   |

| A          | In    | 0.236      | 0.236 | 0.331 |
|            | mm    | 5.990      | 5.990 | 8.400 |
| B          | In    | 0.098      | 0.098 | 0.134 |
|            | mm    | 2.500      | 2.500 | 3.400 |
| C          | In    | 0.087      | 0.087 | 0.146 |
|            | mm    | 2.200      | 2.200 | 3.700 |

RECOMMENDED SOLDER ATTACHMENT: REFLOW SOLDERING

Peak Temperature: 260°C max  
 Max Peak Temperature: -5°C: 30sec max.  
 Max Time above 217°C: 60sec ~150 sec max.

If hand soldering must be used, follow these precautions:

- Use solder iron of less than 30W when soldering.
- Do not allow soldering iron tip to directly touch the ferrite body outside of the terminal electrode.
- 2 seconds maximum at 260°C.

# PLANAR CAPACITOR ARRAYS FOR EMI FILTERING

Johanson Dielectrics is the premier supplier of Planar Capacitor EMI Filter Arrays to the Filtered Connector Industry.

Planar Capacitors are the fundamental building block for filtered connectors in Aerospace, Biomedical, Military, Satellite, Industrial and Communication electronics.

Johanson offers high value Arrays in standard and custom solutions to fit your needs.

## CIRCULAR ARRAYS

| PHYSICAL LAYOUT  | DIELECTRIC MATERIAL | AVAILABLE CAPACITANCE | WORKING VOLTAGE | DWV VOLTAGE     |

# PLANAR CAPACITOR ARRAYS FOR EMI FILTERING

## CUSTOM ARRAYS

Johanson Dielectrics's design expertise and CNC manufacturing process enable broad custom array capability. Many shapes, configurations and geometries are possible. Share your requirements and we will create a solution!

## DISCOIDAL CAPACITORS

Johanson Discoidal Feed-through Capacitors are the functional element in widely used EMI feed-through filters. This capacitor configuration offers very low impedance and inductance. Discoidal capacitors are ideal for by-pass, filtering, coupling, single line EMI/RFI suppression, and high frequency applications.

- Capacitance values from 10 pF to 11.2  $\mu$ F
- Test standards and procedures per MIL-STD-202 and MIL-C-123
- Voltage ratings from 50 to 3000 VDC and 50 to 240 VAC
- Low ESR and ESL, non-polar designs

Call us to discuss your special requirements!

| NOMINAL O.D. (IN.) | DIELECTRIC MATERIAL | AVAILABLE CAPACITANCE | INSIDE DIAMETER (IN.) | THICKNESS (IN.)   | RATED VOLTAGE  |
|--------------------|---------------------|-----------------------|-----------------------|-------------------|----------------|

# CAPSTRATE® CAPACITOR SUBSTRATES

Johanson CapStrate® products integrate bulk capacitance into a ceramic substrate eliminating large discrete capacitive components which saves critical space and simplifies the assembly process. Our design and manufacturing expertise in large format, custom geometries provides innovative solutions that economically solve a wide variety of your design challenges.

## ADVANTAGES

- Major Size & Weight Reduction
- Fewer Solder Joints
- Lower Assembly Cost
- Circuit Assembly Available

## KEY FEATURES

- Integrated Capacitance in The Substrate
- Rated Working Voltages from 50V to 5,000V
- Temperature ranges: -55°C to 125°C (specials to 200°C and 250°C)
- Compact Designs Utilizing Military Grade Ceramics
- Custom Sizes, Values, and Voltages Available

## SIZE / CAPACITANCE CAPABILITY EXAMPLES

# CUSTOM CAPACITOR SOLUTIONS

Johanson's extensive experience in design and manufacture of large format, custom geometries allows us to develop unique and innovative solutions which successfully solve a wide variety of our customer's design challenges. We'll work pro actively with you to fully understand your requirements and recommend the best solution possible.

## KEY FEATURES

---

- Custom shapes to fit specific requirements
- Multiple capacitors in a single assembly
- NP0/COG and X7R solutions from -55°C to +125°C
- Multiple pin, lead-frame, and flying wire options
- Bare ceramic, epoxy coated, potted solutions

## VARIABLE PITCH ASSEMBLIES

---

Another custom approach is our variable pitch design. No longer are you limited to a vendor's standard catalogue offering or only square or rectangular custom designs. We let you become your own capacitor designer by not only telling us the desired capacitance and voltage, but also the size, shape, and location of leads! This process helps insure that the resulting capacitor satisfies every aspect of your design requirements.

# TAPE AND REEL PACKAGING

Johanson capacitors are available taped per EIA standard 481. Tape options include 7" and 13" diameter reels. Johanson uses high quality, dust free, punched 8mm paper tape and plastic embossed 8mm tape for thicker MLCCs. Quantity per reel ranges are listed in the tables below and are dependent on chip thickness. Inductors are available in 7" diameter reels for smaller sizes, and 13" diameter reels for larger sizes

| COMPONENT          | 7" DIAMETER REEL |                  |               |       | 13" DIAMETER REEL |                  |               |       |
