<sup>\*:</sup> Maximum Power Dissipation is Package Type and Case Temperature dependent.

### **APPLICATION CIRCUIT**

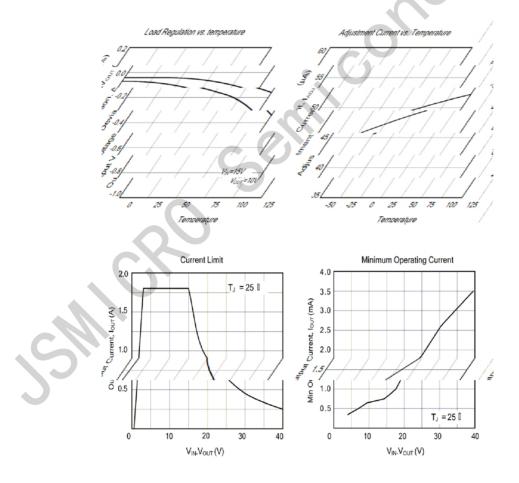

\* = C<sub>IN</sub> is required if the regulator is located near power supply filter.

\*\*= C<sub>O</sub> is needed for stability and it improves transient response.

 $V_{OUT} = V_{REF} \times (1+R2/R1) + I_{ADJ} \times R2$ 

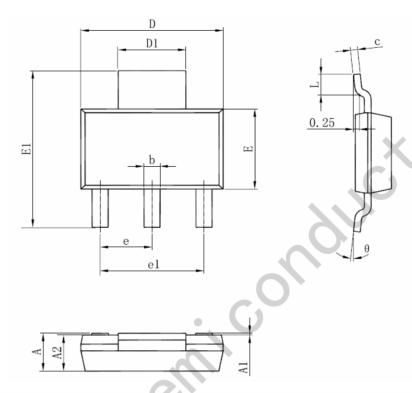

Since  $I_{ADJ}$  is controlled to less than  $100\mu\text{A},$  the error associated with this term is negligible in most applications.
