#### Notes:

- Unless noted otherwise, case temperature  $T_C = +25^\circ\text{C} \pm 2^\circ\text{C}$ .
- The center frequency,  $f_c$ , is measured at the minimum insertion loss point with the resonator in the 50Ω test system.
- Frequency aging is the change in  $f_c$  with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- Turnover temperature,  $T_0$ , is the temperature of maximum (or turnover) frequency,  $f_0$ . The nominal frequency at any case temperature,  $T_C$ , may be calculated from:  $f = f_0 [1 - \text{FTC} (T_0 - T_C)^2]$ .
- This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance  $C_0$  is the static capacitance between Pin 1 and Pin 2 measured at low frequency (10MHz) with a capacitance meter. The measurement includes case parasitic capacitance.

### 4.3 Temperature Characteristics

#### 4.4 Test Circuit

### 5. Remarks

- 5.1 SAW devices should not be used in any type of fluid such as water, oil, organic solvent, etc.
- 5.2 Be certain not to apply voltage exceeding the rated voltage of components.
- 5.3 Do not operate outside the recommended operating temperature range of components.
- 5.4 Sudden change of temperature shall be avoided, deterioration of the characteristics can occur.
- 5.5 Be careful of soldering temperature and duration of components when soldering.
- 5.6 Do not place soldering iron on the body of components.
- 5.7 Be careful not to subject the terminals or leads of components to excessive force.
- 5.8 SAW devices are electrostatic sensitive. Please avoid static voltage during operation and storage.
- 5.9 Ultrasonic cleaning shall be avoided. Ultrasonic vibration may cause destruction of components.
