## U2000 Series <br> USB Power Sensors

The compact, low-cost alternative to conventional power measurement solutions

## Why Keysight's Power Meters and Sensors?

Reliable, high-performing solutions
Every power meter and sensor from Keysight Technologies, Inc. consistently delivers great results.
A sure investment for many years to come
Code-compatibility between power meters reduces the need for re-coding. Not only that, all Keysight power meters are backward- compatible with most legacy power sensors.

One specific application: One right solution
Keysight offers a wide selection of power meters and sensors for practically all application needswireless communications, radar pulse measurements, component test, and more.

## Global network support

No matter where you are, Keysight is committed to giving you the 24-hour support you need regarding our products, applications, or services.

Keysight's power meters have long been recognized as the industry standard for RF and microwave power measurements.

## Compact Solutions for Testing Today's RF and Microwave Communication Systems

For installation and maintenance of base stations

- Lightweight and rugged
- Simple set-up and usage
- Portable with low power consumption
- Wide dynamic and frequency ranges
- Quick and easy testing with large display of readings
- Internal trigger eliminates the problem for applications that do not have external trigger signal
- Trace display capability enables easy gate setup

## For production testing of wireless components

- Compact build saves rack space
- Simple set-up and usage
- Wide dynamic and frequency ranges
- Fast reading speed
- Internal zeroing reduces test time and sensor wear-and-tear
- Quick and easy multiple channels testing with simultaneous display of readings, limits and alerts
- Seamless integration to system with industry standard SCPI
- Internal trigger eliminates the problem for tests that do not have external trigger signal
- Trace display capability enables easy trigger level and gate setup

## For R\&D of wireless components

- Compact build saves bench space
- Simple set-up and usage
- Wide dynamic and frequency ranges
- High accuracy
- Advanced troubleshooting of designs with simultaneous display of multiple readings, measurement math and data recording
- Internal trigger eliminates the problem for applications that do not have external trigger signal

## Introducing the U2000 Series USB Power Sensors

The U2000 Series enable simpler, lower-cost power measurements versus conventional power meter and sensor combinations. Now with nine highperformance models, the U2000 Series USB power sensors offer compact, high-performance solutions for today's CW and modulated signals.

Compact "power meters", simple set-up
The U2000 Series are standalone sensors. That means they essentially operate like power meters, just in smaller forms. No reference calibrator is required. The fact that each sensor draws minimal power from a USB port-and that it doesn't need additional triggering modules or power adaptors to operate-makes it more portable, especially for base station testing. Setting up is easy: just plug it to the USB port of your PC or laptop-or even select network or handheld spectrum analyzer-and start your power measurements. The figure below illustrates the very simple, straightforward setup of the U2000 Series.

## (3)

## Key features

- Compact, lightweight solutions
- Quick, simple set-up
- High accuracy, high power
- Internal zeroing capability
- Fast reading speed
- Wide frequency range:

9 kHz to 24 GHz (sensor option dependent)

- Wide dynamic range:
-60 to +44 dBm
- Support internal and external trigger measurements ${ }^{1}$
- Trace display capability enables easy trigger level and gate setup for burst signals
- Allows remote measurements beyond cable length
- Enables monitoring of more than 20 channels simultaneously
- Converts select Keysight instruments to power meters
- Feature-packed software provides various capabilities for easy testing and analysis
- Average power measurements of CW and modulated signals, including GSM, EDGE, WLAN and WiMAXTM
. Except U2004A model.

## High accuracy

Each U2000 Series sensor provides excellent linearity, SWR and uncertainty specifications, so you can be confident in every measurement you make.

Wide range, high power
The U2000 Series' dynamic range spans across a wide 80 dB , taking on high power up to +44 dBm .

## Remote monitoring and tests

With the U2000 Series sensor plugged to a networked USB hub, you can conveniently monitor power measurements of an antenna tower from the control room, beyond the limits of USB cable lengths.

## Faster production testing of multiple channels

The U2000 Series' fast measurement speed helps reduce test time. This, coupled with the capability to enable monitoring of more than 20 channels simultaneously, is an advantage in the production line where efficiency is of utmost priority.

The U2000 Series has both internal and external zeroing capabilities. With internal zeroing, high isolation switches in the sensor are opened to isolate the sensor from the device-under-test (DUT) it is connected to. As such, you don't need to power-off the DUT or disconnect the sensors. This speeds up testing and reduces sensor wear-and-tear.

No manual input of calibration data is required. All calibration factors, as well as temperature and linearity corrections, are stored in the sensors' EEPROM, auto- downloaded at calibration.

Often, you'd need to automate your tests. The U2000 Series sensors are well-equipped for seamless integration to your system with industry standard SCPI compatibility. They also come with built- in triggering capability to allow receipt of external triggers from other instruments.

## Transform your signal generators and spectrum analyzers into accurate power meters

You could literally have a power meter next to you-or instead, turn your Keysight signal generators, handheld spectrum analyzers or FieldFox handheld RF/Microware analyzers into a power meter for accurate power measurements. Even with the U2000 connected, you can switch between power measurements and the device's original function at any time. You can also use the U2000 with your Keysight network analyzers for source power calibration.

## Intuitive power analysis software

The U2000 Series is supported by the Keysight BenchVue software and BV0007B Power Meter/Sensor Control and Analysis app. Once you plug the USB power sensor into a PC and run the software you can see measurement results in a wide array of display formats and log data without any programming.

For more information, www.keysight.com/find/BenchVue

## Take a Closer Look

Diode-based sensors frequently rely on the application of correction factors to extend their dynamic range beyond their square-law region, typically in the range of -70 to -20 dBm . While this technique achieves measurement of CW signals over a wide dynamic range, it fails to do so for modulated signals when the signal level is above the square-law region. Modulated signals must be padded down, with their average and peak power levels within the diode square-law region, for accurate average power measurement.

The U2000 Series USB power sensors are true-average, wide-dynamic-range RF/ microwave power sensors, based on a dual-sensor diode pair/attenuator/diode pair topology as proposed by Szente et. al. in 1990. ${ }^{1}$

[^0]The simplified block diagram shown here illustrates this technique.

This technique ensures diodes in the selected signal path are kept in their square law region - with output current and voltage proportional to input power. The diode pair/attenuator/diode pair assembly can then yield the average of complex modulation formats across a wide dynamic range, irrespective of signal bandwidth.

The dual range Modified Barrier Integrated Diode (MBID) ${ }^{1}$ package incorporates diode stacks in place of single diodes. This further improves measurement accuracy of high-level signals with high crest factors without incurring damage ${ }^{2}$ to the sensor.

Implementation of both techniques in the U2000 Series USB sensors enable effective average power measurements of a wide range of signals, including multitone and spread spectrum signals used in CDMA, W-CDMA and digital television systems.

[^1]
## Specifications

Specifications contained in this chapter are valid ONLY after proper calibration of the power sensor and apply to continuous wave (CW) signals unless otherwise stated. The recommended calibration interval for this product is one year.

Specifications apply over a temperature range 0 to $+55^{\circ} \mathrm{C}$ unless otherwise stated. Specifications quoted over a temperature range of $25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}$ apply to a relative humidity of $15 \%$ to $75 \%$ and conform to the standard environmental test conditions. Specifications are valid after a 30-minute warmup period.

Supplemental characteristics, shown in italics, are intended to provide useful information with regard to applying the power sensors in that they contain typical, but non-warranted performance parameters. These characteristics are shown in italics or denoted as "typical", "nominal" or "approximate".

## Measurement speed

Normal: 20 readings/s
x2: 40 readings/s
Fast: 110 readings/s
Buffered (50 readings): 1000 readings/s ${ }^{1}$
The U2000 Series USB sensors have two measurement modes:
Average only mode (default mode): Optimized for wide dynamic range. In this measurement mode, a trigger can be controlled externally via TTL input.

Normal ${ }^{2}$ mode: Used for making average power measurement in a defined time interval (time-gated measurement) with reduced dynamic range. A trigger can be derived from an RF signal (internal trigger) or controlled externally via TTL input (external trigger).

## Frequency and power ranges

| Model | Frequency range | Power range | Maximum power |
| :--- | :--- | :--- | :--- |
| U2000A | 10 MHz to 18 GHz | -60 to +20 dBm | +25 dBm avg, 20 VDC |
| U2001A | 10 MHz to 6 GHz |  | $+33 \mathrm{dBm} \mathrm{pk},<10 \mu \mathrm{~s}$ |
| U2002A | 50 MHz to 24 GHz |  |  |
| U2004A | 9 kHz to 6 GHz | -60 to +20 dBm | +25 dBm avg, 5 VDC |
|  |  |  | $+33 \mathrm{dBm} \mathrm{pk},<10 \mu \mathrm{~s}$ |
| U2000B | 10 MHz to 18 GHz | -30 to +44 dBm | +45 dBm avg, 20 VDC |
| U2001B | 10 MHz to 6 GHz |  | $+47 \mathrm{dBm} \mathrm{pk}, 1 \mu \mathrm{~s}$ |
| U2000H | 10 MHz to 18 GHz | -50 to +30 dBm | +33 dBm avg, 20 VDC |
| U2001H | 10 MHz to 6 GHz |  | $+50 \mathrm{dBm} \mathrm{pk}, 1 \mu \mathrm{~s}$ |
| U2002H | 50 MHz to 24 GHz | -50 to +30 dBm | +33 dBm avg, 10 VDC |
|  |  |  | $+50 \mathrm{dBm} \mathrm{pk}, 1 \mu \mathrm{~s}$ |

[^2]
## Maximum SWR

| Model | Frequency range | Maximum SWR ( $25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}$ ) | Maximum SWR ( $0^{\circ} \mathrm{C}$ to $\left.55^{\circ} \mathrm{C}\right)$ |
| :---: | :---: | :---: | :---: |
| U2000A | 10 to 30 MHz | 1.15 | 1.21 |
|  | $>30 \mathrm{MHz}$ to $<2 \mathrm{GHz}$ | 1.13 | 1.15 |
|  | 2 to < 14 GHz | 1.19 | 1.20 |
|  | 14 to < 16 GHz | 1.22 | 1.23 |
|  | 16 to 18 GHz | 1.26 | 1.27 |
| U2001A | 10 to 30 MHz | 1.15 | 1.21 |
|  | $>30 \mathrm{MHz}$ to $<2 \mathrm{GHz}$ | 1.13 | 1.15 |
|  | 2 to 6 GHz | 1.19 | 1.20 |
| U2002A | 50 MHz to 2 GHz | 1.13 | 1.15 |
|  | > 2 to 14 GHz | 1.19 | 1.20 |
|  | > 14 to 16 GHz | 1.22 | 1.23 |
|  | $>16$ to 18 GHz | 1.26 | 1.27 |
|  | $>18$ to 24 GHz | 1.30 | 1.30 |
| U2004A | 9 kHz to 2 GHz | 1.13 | 1.15 |
|  | > 2 to 6 GHz | 1.19 | 1.20 |
| U2000B | 10 MHz to 2 GHz | 1.12 | 1.14 |
|  | $>2$ to <12.4 GHz | 1.17 | 1.18 |
|  | 12.4 to 18 GHz | 1.24 | 1.25 |
| U2001B | 10 MHz to 2 GHz | 1.12 | 1.14 |
|  | $>2$ to 6 GHz | 1.17 | 1.18 |
| U2000H | 10 MHz to < 8 GHz | 1.15 | 1.17 |
|  | 8 to <12.4 GHz | 1.25 | 1.26 |
|  | 12.4 to 18 GHz | 1.28 | 1.29 |
| U2001H | 10 MHz to 6 GHz | 1.15 | 1.17 |
| U2002H | 50 MHz to $<8 \mathrm{GHz}$ | 1.15 | 1.17 |
|  | 8 to <12.4 GHz | 1.25 | 1.26 |
|  | 12.4 to 18 GHz | 1.28 | 1.29 |
|  | > 18 to 24 GHz | 1.30 | 1.31 |

Typical SWR for U2000A sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U2001A sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U2002A sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U2004A sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U 2002 H sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U 2000 H sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U2000B sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U2001H sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

Typical SWR for U2001B sensor $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$

## Switching point

The U2000 Series power sensors have two measurement paths: a low-power path and a high-power path, as shown in the table below.

| Models | AUTO (default) range | Low power path | High power path | Switching point |
| :--- | :--- | :--- | :--- | :--- |
| U2000/1/2/4A | -60 to +20 dBm | -60 to -7 dBm | -7 to +20 dBm | -7 dBm |
| U2000/1/2H | -50 to +30 dBm | -50 to +3 dBm | +3 to +30 dBm | +3 dBm |
| U2000/1B | -30 to +44 dBm | -30 to +23 dBm | +23 to +44 dBm | +23 dBm |

Each power sensor automatically selects the proper power level path. To avoid unnecessary switching when the power level is close to the switching point, switching point hysteresis has been added.

Offset at switching point: $\leq \pm 0.5 \%(\leq \pm 0.02 \mathrm{~dB})$ typical
Switching point hysteresis: $\pm 0.5 \mathrm{dBm}$ typical
Example with U2000 "A" suffix sensors: Switching point for the U2000/1/2/4A sensors is at -7 dBm . Hysteresis causes the low power path to remain selected until approximately -6.5 dBm as the power level is increased. Above this power, the high-power path is selected. The high-power path remains selected until approximately -7.5 dBm is reached as the signal level decreases. Below this power, the low power path is selected.

## Power accuracy

Average only mode power accuracy ${ }^{1}$ (with exclusions).

| Model | Power range | Accuracy ${ }^{1}\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$ | Accuracy ${ }^{1}\left(0^{\circ} \mathrm{C}\right.$ to $\left.55^{\circ} \mathrm{C}\right)$ |
| :--- | :--- | :--- | :--- |
| U2000/1/2/4A | -60 to +20 dBm | $\pm 3.0 \%$ | $\pm 3.5 \%$ |
| U2000/1/2 H | -50 to +30 dBm | $\pm 4.0 \%$ | $\pm 5.0 \%$ |
| U2000/1B | -30 to +44 dBm | $\pm 3.5 \%$ | $\pm 4.0 \%$ |

Specifications valid with the following conditions:

- After zeroing ${ }^{2}$
- Number of averages = 1024
- After 30 minutes of power-on warm-up

[^3]Normal mode power accuracy ${ }^{1,2}$ (with exclusions).

| Model | Power range | Accuracy $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$ |
| :--- | :--- | :--- |
| U2000/1/2/A | -30 to +20 dBm | $\pm 4.0 \%$ |
| U2000/1/2H | -20 to +30 dBm | $\pm 5.0 \%$ |
| U2000/1B | 0 to +44 dBm | $\pm 4.5 \%$ |

Typical power accuracy at $25^{\circ} \mathrm{C}$ for U2000/1/2/4A sensors 3,4

## Typical power accuracy at $25^{\circ} \mathrm{C}$ for U2000/1B sensors ${ }^{3,4}$

[^4]Typical power accuracy at $25^{\circ} \mathrm{C}$ for U2000/1/2H sensors ${ }^{1,2}$

| Error (\%) | U2000/1/2H Models |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1.00 |  |  |  |  |  |  |

[^5]Zero set, zero drift, and measurement noise

## Average only mode

| Power range 1 | Zero set (internal) | Zero set (external) | Zero drift ${ }^{2}$ | Measurement noise ${ }^{3}$ |
| :---: | :---: | :---: | :---: | :---: |
| U2000/1/2A |  |  |  |  |
| -60 to -35 dBm | $\pm 1.5 \mathrm{nW}$ | $\pm 600 \mathrm{pW}$ | 200 pW | 1 nW |
| -38 to -15 dBm | $\pm 2 \mathrm{nW}$ | $\pm 1.5 \mathrm{nW}$ | 400 pW | 1.5 nW |
| -20 to -6.5 dBm | $\pm 12 \mathrm{nW}$ | $\pm 10 \mathrm{nW}$ | 1.5 nW | 15 nW |
| -7.5 to -2 dBm | $\pm 2 \mu \mathrm{~W}$ | $\pm 500 \mathrm{nW}$ | 50 nW | 650 nW |
| -4 to 15 dBm | $\pm 4 \mu \mathrm{~W}$ | $\pm 1 \mu \mathrm{~W}$ | 500 nW | $1 \mu \mathrm{~W}$ |
| 10 to 20 dBm | $\pm 6 \mu \mathrm{~W}$ | $\pm 5 \mu \mathrm{~W}$ | $2 \mu \mathrm{~W}$ | $10 \mu W$ |
| U2004A |  |  |  |  |
| -60 to -35 dBm | $\pm 2.8 \mathrm{nW}$ | $\pm 600 \mathrm{pW}$ | 200 pW | 1 nW |
| -38 to -15 dBm | $\pm 3 \mathrm{nW}$ | $\pm 1.5 \mathrm{nW}$ | 400 pW | 1.5 nW |
| -20 to -6.5 dBm | $\pm 12 \mathrm{nW}$ | $\pm 10 \mathrm{nW}$ | 1.5 nW | 15 nW |
| -7.5 to -2 dBm | $\pm 2 \mu \mathrm{~W}$ | $\pm 500 \mathrm{nW}$ | 50 nW | 650 nW |
| -4 to 15 dBm | $\pm 4 \mu \mathrm{~W}$ | $\pm 1 \mu \mathrm{~W}$ | 500 nW | $1 \mu \mathrm{~W}$ |
| 10 to 20 dBm | $\pm 6 \mu \mathrm{~W}$ | $\pm 5 \mu \mathrm{~W}$ | $2 \mu \mathrm{~W}$ | $10 \mu W$ |
| U2000/1/2H |  |  |  |  |
| -50 to -25 dBm | $\pm 15 \mathrm{nW}$ | $\pm 8 \mathrm{nW}$ | 2 nW | 10 nW |
| -28 to -5 dBm | $\pm 20 \mathrm{nW}$ | $\pm 20 \mathrm{nW}$ | 4 nW | 15 nW |
| -10 to 3.5 dBm | $\pm 120 \mathrm{nW}$ | $\pm 100 \mathrm{nW}$ | 15 nW | 150 nW |
| 2.5 to 8 dBm | $\pm 20 \mu \mathrm{~W}$ | $\pm 20 \mu \mathrm{~W}$ | 500 nW | $6.5 \mu \mathrm{~W}$ |
| 6 to 25 dBm | $\pm 40 \mu \mathrm{~W}$ | $\pm 30 \mu \mathrm{~W}$ | $5 \mu \mathrm{~W}$ | $10 \mu \mathrm{~W}$ |
| 20 to 30 dBm | $\pm 60 \mu \mathrm{~W}$ | $\pm 60 \mu \mathrm{~W}$ | $20 \mu W$ | $100 \mu W$ |
| U2000/1B sensors |  |  |  |  |
| -30 to -5 dBm | $\pm 1.8 \mu \mathrm{~W}$ | $\pm 800 \mathrm{nW}$ | 200 nW | $1 \mu W$ |
| -8 to 15 dBm | $\pm 2 \mu \mathrm{~W}$ | $\pm 2 \mu \mathrm{~W}$ | 400 nW | $1.5 \mu \mathrm{~W}$ |
| 10 to 23.5 dBm | $\pm 12 \mu \mathrm{~W}$ | $\pm 10 \mu \mathrm{~W}$ | $1.5 \mu W$ | $15 \mu \mathrm{~W}$ |
| 22.5 to 28 dBm | $\pm 2 \mathrm{~mW}$ | $\pm 1 \mathrm{~mW}$ | 50 nW | $650 \mu W$ |
| 26 to 44 dBm | $\pm 4 \mathrm{~mW}$ | $\pm 2 \mathrm{~mW}$ | $500 \mu W$ | 1 mW |

[^6]Normal mode

| Range 1 | Zero set (internal) | Zero set (external) | Zero drift ${ }^{2}$ | Measurement noise ${ }^{3}$ | Noise per sample ${ }^{4}$ |

| -8 to 15 dBm | 47 nW | $43 \mu W$ | $25 \mu W$ | $28 \mu W$ | $90 \mu \mathrm{~W}$ |
| 10 to 23.5 dBm | 530 nW | $480 \mu W$ | $230 \mu W$ | $300 \mu W$ | 1 mW |
| 22.5 to 28 dBm | $30 \mu \mathrm{~W}$ | 27 mW | 19 mW | 20 mW | 55 mW |
| 26 to 44 dBm | $32 \mu W$ | 34 mW | 24 mW | 21 mW | 85 mW |

Effect of time-gating and averaging on normal mode measurement noise:
The normal mode measurement noise will depend on the gate length (time-gated period in second) and the number of averages. The noise can be approximately calculated with the following equations.

If the gate length is $<2.73 \mu \mathrm{~s}$, use Equation 1 :

1
Noise $=$ Noise per sample $\times \frac{}{\sqrt{\text { Number of averages }}}$

Otherwise, use Equation 2:

Note: If the noise value obtained from Equation 1 or 2 is lower than the measurement noise specification, use the value as specified in the measurement noise table.

[^7]Effects of averaging on noise: Averaging over 1 to 1024 readings is available for reducing noise. The table below provides the measurement noise for a particular sensor with the number of averages set at 16 (for normal mode) and 32 (for $x 2$ mode). Use the noise multiplier, for the appropriate of averages, to determine the total measurement noise value.

Example:
U2000A power sensor, -60 to -35 dBm , normal mode, number of averages $=4$
Measurement noise calculation: $1 \mathrm{nW} \times 1.7=1.7 \mathrm{nW}$

Average only mode

| Number of averages | 1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Noise multiplier |  |  |  |  |  |  |  |  |  |  |  |
| Normal mode | 2.0 | 1.8 | 1.7 | 1.5 | 1.0 | 0.95 | 0.74 | 0.55 | 0.39 | 0.29 | 0.21 |
| x2 mode | 2.7 | 2.4 | 2.0 | 1.6 | 1.0 | 0.91 | 0.78 | 0.53 | 0.34 | 0.29 | 0.20 |

Settling time
Manual filter, $10-\mathrm{dB}$ decreasing power step (not across switching points).

| Number of averages | 1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Settling time (s) |  |  |  |  |  |  |  |  |  |  |  |

Auto filter, default resolution, 10-dB decreasing power step

Settling time with auto filter, default resolution, and a 10 dB decreasing power step (not across the switching point) Settling time $=25 \mathrm{~ms}^{1}$

## Calibration factor and reflection coefficient

Calibration factor (CF) and reflection coefficient (Rho) data is unique to each sensor. The CF corrects for the frequency response of the sensor. The reflection coefficient (Rho or $\rho$ ) relates to the SWR based on the following formula:

$$
S W R=\frac{1+\rho}{1+\rho}
$$

Maximum relative uncertainties of the CF data are listed in the following table. There is only one set of CF relative uncertainty specification used for both high and low power paths of each sensor.

The uncertainty analysis for the calibration data was done in accordance with the ISO Guide. The uncertainty data reported on the calibration certificate is the expanded uncertainty with a $95 \%$ confidence level and a coverage factor of 2.

[^8]| Frequency | Relative Uncertainty (\%) $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)^{1}$ |
| :---: | :---: |
| U2000A sensor |  |
| 10 to 30 MHz | 1.8 |
| $>30 \mathrm{MHz}$ to $<2 \mathrm{GHz}$ | 1.6 |
| 2 to $<14 \mathrm{GHz}$ | 2.0 |
| 14 to <16 GHz | 2.2 |
| 16 to 18 GHz | 2.2 |
| U2001A sensor |  |

## Using the U2000 Series with the BenchVue Software

The U2000 Series is supported by the Keysight BenchVue software's BV0007B Power Meter/Sensor Control and Analysis app. Keysight BenchVue software for the PC accelerates testing by providing intuitive, multiple instrument measurement visibility and data capture with no programming necessary. You can derive answers faster than ever by easily viewing, capturing and exporting measurement data and screen shots. BenchVue software license (BV0007B) is now included with your instrument.

For more information, www.keysight.com/find/BenchVue

Digital meter, analog meter and datalog view.

## Supported functionality

| Measurement displays | Digital meter |
| :---: | :---: |
|  | Analog meter |
|  | Data log view |
|  | Trace view (up to 4 channels or traces on one graph) |
|  | Multilist with ratio/delta function |
|  | Compact mode display |
| Graph functions | Single marker (up to 5 markers per graph) |
|  | Dual marker (up to 2 sets of markers per graph) |
|  | Graph autoscaling |
|  | Graph zooming |
|  | Gate measurement analysis (up to 4-pair of gates) |
| Pulse characterization functions | 17-point automatic pulse parameters characterization |
| Instrument settings | Save and recall instrument state including graph settings |
|  | Instrument preset settings |
|  | FDO tables |
|  | Full instrumentation control includes frequency/average/trigger settings, zero, etc. |
| Limit and alert function | Sensors Limit and alert notification |
|  | Alert summary |
| Export data or screen shots | Data logging (HDF5/MATLAB/Microsoft Excel/Microsoft Word/CSV) |
|  | Save screen capture (PNG/JPEG/BMP) |

## System and Installation Requirements

| PC operating system |  |
| :--- | :--- |
| Windows 10, 8 and 7 | Windows 10 32-bit and 64-bit (Professional, Enterprise, Education, Home versions) |
|  | Windows 8 32-bit and 64-bit (Core, Professional, Enterprise) |
|  | Windows 7 SP1 and later 32-bit and 64-bit (Professional, Enterprise, Ultimate) |
| Professor: 1 GHz or faster (2 GHz or greater recommended) |  |
| Windows XP SP3 32-bit <br> (Professional) | RAM: $1 \mathrm{~GB}(32$-bit) or $2 \mathrm{~GB}(64-$-bit) $(3 \mathrm{~GB}$ or greater recommended) |
| Interfaces 600 MHz or faster (1 GHz or greater recommended) |  |
| RAM: $1 \mathrm{~GB}(2 \mathrm{~GB}$ or greater recommended) |  |
|  | USB, GPIB, LAN, RS-232 |

## Additional requirements

Software: BenchVue requires a VISA (Keysight or National Instruments) when used to connect to physical instruments. Keysight IO Libraries, which contains the necessary VISA, will be installed automatically when BenchVue is installed.

IO Libraries information is available at: www.keysight.com/find/iosuite

## Ordering Information

## Power sensors

| Models | Description | Power range | Connector type |
| :--- | :--- | :--- | :--- |
| U2000A | 10 MHz to 18 GHz USB sensor | -60 to +20 dBm | N-type male, $50 \Omega$ |
| U2000B | 10 MHz to 18 GHz USB sensor | -30 to +44 dBm | N-type male, $50 \Omega$ |
| U2000H | 10 MHz to 18 GHz USB sensor | -50 to +30 dBm | N-type male, $50 \Omega$ |
| U2001A | 10 MHz to 6 GHz USB sensor | -60 to +20 dBm | N-type male, $50 \Omega$ |
| U2001B | 10 MHz to 6 GHz USB sensor | -30 to +44 dBm | N-type male, $50 \Omega$ |
| U2001H | 10 MHz to 6 GHz USB sensor | -50 to +30 dBm | N-type male, $50 \Omega$ |
| U2002A | 50 MHz to 24 GHz USB sensor | -60 to +20 dBm | 3.5 mm male, $50 \Omega$ |
| U2002H | 50 MHz to 24 GHz USB sensor | -50 to +30 dBm | 3.5 mm male, $50 \Omega$ |
| U2004A | 9 kHz to 6 GHz USB sensor | -60 to +20 dBm | N-type male, $50 \Omega$ |
| Options and accessories |  |  |  |
| U2001A-H03 | U2001A sensor with extended frequency range, 3 MHz to 6 GHz |  |  |
| U2001A-H16 | With 1 K ohms input trigger impedance. Higher impedance is typically required when several <br> instruments' input trigger ports are connected in parallel for triggering purpose. Standard <br> option has 50 ohms input trigger impedance. |  |  |
| U2001A-H25 | U2001A sensor with extended power range, -60 dBm to +25 dBm |  |  |
| U2002A-H26 | U2002A sensor with extended frequency range, 10 MHz to 26.5 GHz |  |  |
| Standard-shipped accessories |  |  |  |
| Trigger cable BNC Male to SMB female $50 \Omega, 1.5$ m |  |  |  |
| Power sensor cable: 1.5 m, 3.0 m, or 5.0 m |  |  |  |

Accessories, calibration and documentation options.

[^0]:    1 US Patent \#4943764 assigned to Hewlett-Packard Company.

[^1]:    1 November 1986 Hewlett-Packard Journal pages 14-2, "Diode Integrated Circuits for Millimeter-Wave Applications".
    2 Refer to "Maximum Power" on page 9 for maximum power handling specifications.

[^2]:    1 The 1000 reading/s is the derived measurement speed from the first 50 readings in buffered mode.
    The maximum number of measurements that can be obtained in one second is 250 readings in buffered mode.
    2 Not applicable for U2004A.

[^3]:    1 This accuracy is essentially a combination of linearity, instrumentation accuracy, and traceability to absolute accuracy at $50 \mathrm{MHz}, 0 \mathrm{dBm}$. Note: Mismatch uncertainty, calibration factor uncertainty, and power level dependent terms (zero set, drift, and noise) are excluded in this specification and specified elsewhere in the data sheet.
    2 It is advisable to perform external zeroing on the $U 2000$ Series power sensor for power measurement level below -30 dBm . During the external zeroing process, the RF input signal must be switched off or the device-under-test disconnected from the U2000 Series power sensor.

[^4]:    1 This accuracy is essentially a combination of linearity, instrumentation accuracy, and traceability to absolute accuracy at $50 \mathrm{MHz}, 0 \mathrm{dBm}$. Note: Mismatch uncertainty, calibration factor uncertainty, and power level dependent terms (zero set, drift, and noise) are excluded in this specification and specified elsewhere in the data sheet.
    2 The accuracy for -7 to $+1 \mathrm{dBm}(\mathrm{U} 2000 / 1 / 2 \mathrm{~A}),+3$ to $+11 \mathrm{dBm}(\mathrm{U} 2000 / 1 / 2 \mathrm{H})$, and +23 to $+31 \mathrm{dBm}(\mathrm{U} 2000 / 1 \mathrm{~B})$ power level will be dominated by zero set and measurement noise. For overall accuracy, refer to the measurement uncertainty calculator which is available on the Keysight Technologies Web site
    3 Measurement uncertainty $\leq 1.9 \%$. At room temperature and excluding power level dependent terms (zero set, drift, and noise). Refer to Keysight Fundamentals of RF and Microwave Power Measurements (Part 3) Power Measurement Uncertainty per International Guide (Application Note 1449-3), 5988-9215EN for more information on measurement uncertainty.
    4 After zeroing, 30 minutes of power-on warm-up, and 1024 averages

[^5]:    1 Measurement uncertainty $\leq 1.9 \%$. At room temperature and excluding power level dependent terms (zero set, drift, and noise). Refer to Keysight Fundamentals of RF and Microwave Power Measurements (Part 3) Power Measurement Uncertainty per International Guide (Application Note 1449-3), 5988-9215EN for more information on measurement uncertainty.
    2 After zeroing, 30 minutes of power-on warm-up, and 1024 averages

[^6]:    1 Condition: (i) 0 to $55{ }^{\circ} \mathrm{C}$ and (ii) $95 \%$ relative humidity at $40{ }^{\circ} \mathrm{C}$ non-condensing.
    2 Within one hour after zero set, at a constant temperature, after a 24-hour warm-up of the power sensor
    3 The number of averages at 1 for Normal speed, gate length of 2.27 ms , measured over one-minute interval and two standard deviations.

[^7]:    1 Condition: (i) 0 to $55^{\circ} \mathrm{C}$ and (ii) $95 \%$ relative humidity at $40{ }^{\circ} \mathrm{C}$ non-condensing.
    2 Within one hour after zero set, at a constant temperature, after a 24 -hour warm-up of the power sensor
    3 The number of averages at 1 for Normal speed, gate length of 2.27 ms , measured over one-minute interval and two standard deviations.
    4 The Noise Per Sample specification is only applicable for gated power working range stated in the "Normal Mode Key Specifications and Characteristics" table.

[^8]:    1 When a power step crosses through the sensor's auto-range switching point, add 25 ms .

[^9]:    1 The characterized calibration factor should not deviate between periodic calibrations by more than the specified maximum uncertainty in table. Compliance is confirmed by the relative deviation $\left(\frac{\left|c F_{1}-C F_{2}\right|}{C F_{1}} * 100\right)$ being less than or equal to $\sqrt{ } 2$ times the specified maximum uncertainty. $\sqrt{ } 2 * U \max$ with a reference calibration factor of $100 \%$

[^10]:    1 This is only available for option U2001A-H16
    2 Not applicable for U2004A.

[^11]:    1 See "Ordering information" for available options.
