Product Description

The KXTH9-2083 is a Tri-axis, silicon micromachined accelerometer with a full-scale output range of $\pm 2.5g$ (24.5 m/s/s). The sense element is fabricated using Kionix's proprietary plasma micromachining process technology. Acceleration sensing is based on the principle of a differential capacitance arising from acceleration-induced motion of the sense element, which further utilizes common mode cancellation to decrease errors from process variation, temperature, and environmental stress. The sense element is hermetically sealed at the wafer level by bonding a second silicon lid wafer to the device using a glass frit. A separate ASIC device packaged with the sense element provides signal conditioning and self-test. The accelerometer is delivered in a 3 x 3 x 0.9mm Land Grid Array (LGA) plastic package operating from a 1.8 – 3.6 V DC supply. The KXTH9 features a factory programmable low pass filter.

There are 2 factory programmable modes of operation for the KXTH9:

Mode 00 – The PD pin must be **high** for normal operation and **low** for power shutdown.

Mode 01 – The PD pin must be **low** for normal operation and **high** for power shutdown.

The KXTH9-2083 is factory programmed to be in MODE 01.

Application Design Equations

The bandwidth is determined by a factory programmable switched capacitor filter. The filter can be set at the factory to be 2kHz, 1kHz, 500Hz, 100Hz, 50Hz, or no low pass filter. Alternatively, bandwidth can be reduced by addition of a capacitor on the output pins 5, 6, and 7 according to the equation:

$$C_2 = C_3 = C_4 = \frac{4.97 \times 10^{-6}}{f_{BW}}$$

USING THE MULTIPLEXED OUTPUT OF THE KXTH9

Multiplexer Data Select

The KXTH9 features an integrated 4-channel multiplexer. This feature reduces system MCU requirements to only 1 ADC and 2 digital I/O's. The KXTH9 uses two select inputs (S0, S1) to control the data flow from Vmux. When a microprocessor toggles the select inputs, the desired output is attained based on the select table. Note that logic 0 is GND and logic 1 is Vdd.

S1	S0	Vmux
0	0	X Output
0	1	Y Output
1	0	Z Output
1	1	Aux In

Output Select Table

Data Sampling Rate

When operating in its multiplexed mode, the KXTH9 has the ability to achieve very high data sampling rates. Internally, the sensor elements (X, Y, and Z) are sequentially sampled in a "round robin" fashion at a rate of 32 kHz per axis. Combine this high sensor element sampling rate with the short 5 μs settling time of the integrated multiplexer, and the user can achieve a performance very close to that of the 3 separate analog outputs. This is more than sufficient to eliminate any aliasing in the final application since the KXTH9 will be operating with a typical bandwidth of ~50Hz and a maximum of 1000Hz.
