- Handheld

Ethertronics' series of Ceramic Isolated Magnetic Dipole™ (IMD) antennas deliver on the key needs of device designers for higher functionality and performance in smaller/thinner designs. These innovative antennas provide compelling advantages for Bluetooth® enabled mobile devices.

Real-World Performance and Implementation

Ceramic antennas may look alike on the outside, but the important difference is inside. Other antennas may contain simple PiFA or monopole designs that interact with their surroundings, complicating layout and compromising performance. Ethertronics antennas utilize patented IMD technology to deliver optimum performance in a miniature size configuration.

Greater Flexibility

Ethertronics' first-in-class IMD technology enables you to develop designs that are more advanced and that deliver superior performance in reception critical applications.

Ethertronics Antenna Layout
(Required)

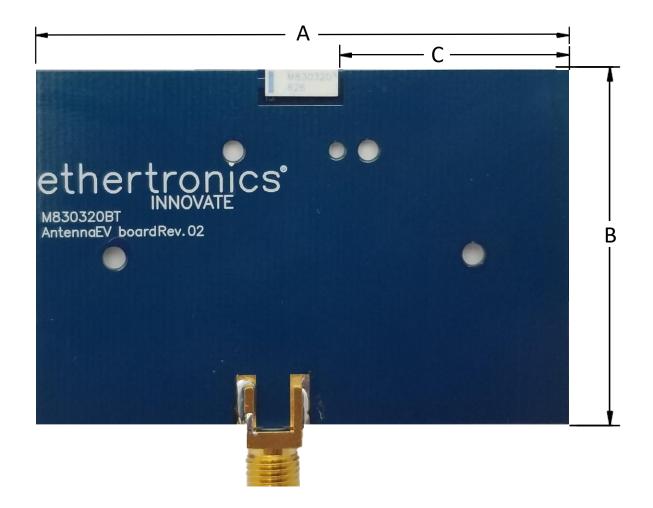

- The antenna tuning loop is formed by the PCB layout.
- The feed pin and shorting pin are combined because it requires very close proximity to achieve more band- width.
