

User Guide Sentrius RG1xx

Version 3.8

REVISION HISTORY

Version	Date	Notes	Contributor(s)	Approver
1.0	20 July	Initial Release		Jonathan Kaye
1.1	3 Aug 2017	Clarified web interface URL. Identified separate mDNS address.		Shewan Yitayew
1.2	29 Nov 2017	Update info for compatibility with GA2 (93.7.2.x) firmware. Add compliance information. Add IP67 Rated Version Specs		Jonathan Kaye
2.0	13 Dec 2017	Changed Rev # to 2.0 to match engineering release		Jonathan Kaye
2.1	04 Jan 2018	Miscellaneous text and grammatical edits		Shewan Yitayew
2.2	10 Jan 2018	Adding Ordering Information		Jonathan Kaye
3.0	28 Feb 2018	Adding UAE Certification Compliance, Firmware update info		RG, RDE
3.1	15 Mar 2018	Added note to Wi-Fi Quick Configuration section regarding available firmware version Updated to new template		Jonathan Kaye
3.2	29 Mar 2018	Removed inapplicable Firmware update URLs	Sue White	Jonathan Kaye
3.3	13 Apr 2018	Important update to firmware upgrade procedure	Ryan Erickson	Shewan Yitayew
3.4	30 May 2018	Updates for GA3 firmware. Add section for web session timeout. Update firmware upgrade section.	Ryan Erickson	Jonathan Kaye
3.5	20 Aug 2018	Updated Outdoor Enclosure Connector Layout	Robert Gosewehr	Jonathan Kaye
3.6	19 Dec 2018	Updated logos and URL	Sue White	Jonathan Kaye
3.7	7 Mar 2019	Updated Section 9.4.2 for clarity Updated template	Robert Gosewehr Sue White	Jonathan Kaye
3.8	11 Oct. 19	Added AS923/AU915 Region Support	Robert Gosewehr Adam Ruehl Raj Khatri Chris Boorman	Jonathan Kaye

1 ABOUT THIS GUIDE

This document is the parent guide of the *RG1xx Quick Start Guide* and provides a comprehensive guide on how to configure the Sentrius RG1xx gateways to suit the intended application. It covers all the Sentrius RG1xx functionality, including Ethernet, Wi-Fi and LoRa configurations. It also provides instructions for setting up the gateway on a LoRa network server.

Note: Step-by-step instruction, screen shots, and pictures are based on the Sentrius RG191, but the same is applicable for the Sentrius RG186 and other AS923, AU915 variants; differences are highlighted in the notes.

2 INTRODUCTION

2.1 Product Overview

Laird's Sentrius[™] RG1xx LoRa-Enabled Gateway is the ultimate in secure, scalable, robust LoRa solutions for end-to-end control of your private LoRaWAN network. Leveraging Laird's fieldproven and reliable 50 Series *Wireless Bridge* certified module, it also offers enterprise dual-band Wi-Fi and wired Ethernet for complete design freedom. Based on the Semtech SX1301/SX1257 chipset designs, it offers a LoRa range up to ten miles and pre-loaded LoRa Packet Forwarder software, perfect for highly scalable, flexible IoT networks. The Sentrius RG1xx Gateway works with Laird's Sentrius RM1xx Series LoRa+BLE certified modules for simple out-of-the-box integration and is compatible with third-party cloud and LoRa partners, as well as any LoRaWANcertified client devices.

Accessories	Included	1 x 863-870 MHz antenna (with RG186) or 1 x 902-928 MHz antenna (with RG191, AS923 & AU915 variants) 2 x 2.4/5 GHz Wi-Fi antennas 1 x External DC power adapter
Enclosure	Standard	Moulded plastic housing
Warranty		One-year warranty

2.3 Ordering Information

IMPORTANT NOTE: The region setting of the radio cannot be changed. The user must purchase the appropriate model for the desired region of operation and only use the model appropriate for the location in which they will install the gateway.

Table 1: Ordering information				
Part Number	Description			
RG186	Intelligent LoRaWAN 868MHz Gateway including Wi-Fi, BT, and Ethernet – EU Accessory Kit			
RG191	Intelligent LoRaWAN 915MHz Gateway including Wi-Fi, BT, and Ethernet – US Accessory Kit			
455-00028	Intelligent LoRaWAN 868MHz Gateway including Wi-Fi, BT, and Ethernet – UK Accessory Kit			
450-0190	Sentrius™ RG186 Gateway including LoRaWAN, Wi-Fi, BT, and Ethernet - IP67			
450-0191	Sentrius™ RG191 Gateway including LoRaWAN, Wi-Fi, BT, and Ethernet - IP67			
The following regions orderable from December 2019				
455-00054	Intelligent LoRaWAN 923MHz Gateway including Wi-Fi, BT, and Ethernet – TW Accessory Kit			
455-00055	Intelligent LoRaWAN 923MHz Gateway including Wi-Fi, BT, and Ethernet – NZ Accessory Kit			
455-00056	Intelligent LoRaWAN 923MHz Gateway including Wi-Fi, BT, and Ethernet – HK Accessory Kit			
455-00057	Intelligent LoRaWAN 915/923MHz Gateway including Wi-Fi, BT, and Ethernet – AU Accessory Kit			
Accessories				
690-1002	Pole Mount Bracket - Accessory for 450-0190 or 450-0191			
690-1003	Wall Mount Bracket - Accessory for 450-0190 or 450-0191			

3 CONNECTING THE HARDWARE

3.1 Connect the Gateway

To use the gateway, you must power up the gateway and access the web interface via the Ethernet port. To do this, follow these steps:

- 1. Follow the label on the box and connect the three antennas. Refer to *Antenna Configuration* for additional information.
- 2. Connect the power supply (see #2 in Figure 3).
- 3. Connect the gateway to your router (#3 in Figure 3) using the Ethernet cable (#1 in Figure 3).
 - Alternatively use the Wi-Fi Quick Config mechanism. Refer to Wi-Fi Quick Configuration for additional information.

Your gateway is now connected and ready.

Figure 3: Connecting the gateway

3.1.1 Antenna Configuration

To configure the antenna properly, do the following:

- 1. Attach the two shorter antennas to the 2.4/5.5 GHz (Wi-Fi) ports.
- 2. Attach the third and longer antenna to the 868 MHz/900 MHz (LoRa) port.

3.1.2 Wi-Fi Quick Configuration

Note: This feature only works with firmware version 93.7.2.9 and newer. Please verify your Gateway firmware version number and, if required, upgrade to a current version. Refer to Updating Gateway Firmware for additional information regarding this upgrade.

The gateway includes a mode to allow you to configure without ethernet access, in the case that you wish to join a wireless network.

Apply power to the gateway and allow to start, then perform the following:

- 1. Depress and hold the user button (see #2 in Figure 2) for seven seconds.
- 2. From a wirelessly enabled device perform a scan.
- 3. Connect to the access point rg1xx29378B, where 29378B are the last six digits of the Ethernet MAC address found on the label on the bottom of the gateway (*Figure 4Error!* Reference source not found.).

The network is secured with WPA2 with a password that is the same as the SSID. We recommend that you change the default password for security reasons. The password can be changed on the Wi-Fi > Advanced web page.

Upon logout or client disassociation, Wi-Fi Quick Config shuts down and normal operation resumes.

4 LOG INTO THE GATEWAY

To log into the gateway web interface, follow these steps:

1. Determine the last three bytes of your gateway's Ethernet MAC address. This can be found on the label on the bottom of the gateway; the last three bytes are highlighted (*Figure 4*Error! Reference source not found.).

Figure 4: Bottom label (Standard GW – Left, AS923 & AU915 Region Supported/Latest Version – Right)– last three bytes of the Ethernet MAC address highlighted

- Enter the URL into the web browser to access the web interface. For example, for the gateway used in this guide, the URL is https://rg1xx29378B.local., where "29378B" are the last six digits of the Ethernet MAC address. In Wi-Fi quick config mode, the gateway can also be accessed via the IP address at https://192.168.1.1
- 3. Accept the self-signed security certificate in the browser.
- 4. Click Advanced (Figure 5).

Figure 5: Web interface – first screen

5. Click **Proceed** (Figure 6).

Figure 6: Web interface – second screen

6. Log on using the following default credentials:

Username: sentrius Password: RG1xx

5 LAN CONNECTION SETUP

The LAN menu allows selections for configuration and status of the IPv4/IPv6 wired network. The current status of the IPv4 network is also displayed. To access this section, click **LAN** in the page menu.

5.1 IPv4 Configuration

The first page for configuring the Ethernet LAN connection is the IPv4 Configuration page. There are two basic modes of operation – DHCP and Static. These are selected in the IP Address Acquisition Method drop-down box (Figure 10). The gateway factory default setting is DHCP.

Laird Dashboard LAN WI-FI LoRa Setting	S	Logout
IPv4 Configuration	Wired LAN Configuration IPv4	
IPv6 Configuration	IP Address Acquisition Method	
Advanced	static •	
Wind LAN Connected: True	Device IP Address	External Gateway IP
IP Address: 10.16.122.12	10.16.122.12	10.16.120.1
IP Address Method dhen	Broadcast IP	Device Subnet Mask
in Address meaned andp	10.16.123.255	255.255.254.0
	DNS Servers	
	DNS Server 1 IP	
	10.16.5.160 Remove	
	DNS Server 2 IP	
	8.8.8.8 Remove	
	Save Configuration	

Figure 10: IPv4 Configuration page

- DHCP When in DHCP mode, all settings are provided by the DHCP server. All configuration settings (except IP Address Acquisition Method) are greyed out. IP values provided by DHCP are displayed but cannot be changed.
- Static When the IP Address Acquisition Method is set to static, all IP settings are fixed and saved in the device. The
 external Gateway IP address is optional and may be left blank. DNS Server IP addresses are also optional. Zero, one,
 or two DNS servers may be specified.

5.2 IPv6 Configuration

Select the IPv6 configuration by clicking the IPv6 menu item in the side menu of the LAN view (Figure 10). The IPv6 configuration settings are shown below.

There are two fully supported modes for IPv6 addressing:

- DHCP In DHCP mode, all settings are provided through communication with an IPv6 server on the network.
- Auto In auto mode, you have the option of selecting the auto DHCP method (either stateless or SLAAC). As of June 2017, IPv6 static mode is only partially supported. Please see the software release notes for current information.

	DNS Servers				
	Add DNS Server				
	Save Configuration				

Figure 11: IPv6 Configuration page

5.3 Advanced View

Select the advanced view by clicking the Advanced menu item in the LAN sidebar (Figure 12). The Advanced view shows all network information provided by the Wi-Fi module in the gateway. Depending on the settings of the network and the gateway, not all settings may apply to the current mode of operation. This view is intended to support advanced users in troubleshooting their network.

Figure 12: Advanced view

6 WI-FI CONNECTION SETUP

By default, the gateway's Wi-Fi radio is not configured to connect to a Wi-Fi network. The user must access the web interface on the gateway via the Ethernet interface to setup the Wi-Fi connection.

To setup a Wi-Fi connection, click the **Wi-Fi** tab in the main menu (Figure 13).

Laird	Dashboard	LAN	/i-Fi	oRa Settings		Logout

Figure 13: Wi-Fi connection setup

In the sidebar on the left, you can navigate to various Wi-Fi pages and see the status of the Wi-Fi interface. There is also a button to enable/disable the Wi-Fi radio.

6.1 Use Scan to Add a Profile

To use the scan function to add a profile, follow these steps:

1. Connect to a Wi-Fi network – click Scan to scan for nearby Wi-Fi networks. Scanning continues until you click Stop or click on one of the listed scan results (Figure 14).

Laird	Dashboard LAN	Wi-Fi	LoRa Settings				Logout

6.2 Manually Adding a Profile

To add a Wi-Fi network profile manually, follow these steps:

1. Click the LAN button in the main menu, then click the **Profiles** button in the left menu. This page is useful for adding a hidden Wi-Fi network that is not broadcasting its SSID (Figure 16).

an		Wi-Fi Profiles	+ Profile

7.1 Using Presets

The Sentrius RG1xx contains multiple preset configurations for connecting to a third-party server or as the basis for a private network. These presets configure the forwarder and the channel plan.

To apply a preset configuration, follow these steps:

- 1. Click the **LoRa** tab in the main menu. The default page of the LoRa menu is the **Presets** page (also accessible in the left side menu of the LoRa pages).
- 2. Select the preset from the drop down. Information about this preset is displayed in a panel to the right (Figure 21).
- 5. Click **Apply** to apply the preset configuration. After a few moments, a green confirmation appears on the bottom of the page.

Note: After applying a preset, further changes can be made on the other screens. Some presets (such as Loriot) use a custom forwarder and may not be modified.

Figure 22: Semtech packet forwarder configuration

7.3 Radios

The radio page provides configuration of the radios and channels. The LoRa card has two radios (Radio 0 and Radio 1). This interface allows advanced users to change radio and channel assignments within the allowed range per the gateway region. Depending on the forwarder being used, the radio configuration may not be available.

7.3.1 Channel Plan Graphic

At the top of the Radios page is a graphic representation of the full bandwidth range, channels, and radios. This graphic is different for gateways operating in US mode and EU mode.

7.3.2 Radio Center Frequencies

Each radio is assigned a center frequency. Channels are then assigned to each radio and given an offset from the center (Figure 23).

Laird Dashboard LAN	Wi-Fi LoRa	Settings	out

Gateway Connected true	Radio	O Center Frequency	
Region Code US			
Mode semtech			

Figure 23: Channel assignments

7.3.3 Channels

Channels are enabled and assigned to either radio. Each radio can have up to five channels assigned to it.

The channel's frequency is an offset of its radio's center frequency. For most channels with a 125-kHz bandwidth, the offset can be -0.4 to +0.4 MHz.

LoRa STD and FSK channels have configurable bandwidth. For these channels, when operating in 250-kHz or 500-kHz bandwidth, the offset can be -0.3 to +0.3 MHz.

Each channel should be placed at least 200 kHz from any other channel, otherwise the channel's bandwidth overlaps. While this configuration still functions, there is wasted bandwidth. The interface displays a warning and marks each channel in red if they overlap (Figure 25). Channel configuration is shown in Figure 24.

		Channels
Enable Channel	Radio	Frequency
Multi SF 0	Radio 0	- + 911.9 MHz
 Multi SF 1 	Radio 0	- + 912.1 MHz
Multi SF 2	Radio 0	- + 912.3 MHz

Figure 25: Overlapping channels

7.3.4 LoRa Radio Card (US)

Gateways that operate in the US region should have a 500-kHz channel. In Figure 26, the allowed placement of these channels displays larger and blue.

If a 500-kHz channel is not configured, the interface displays a warning.

Figure 26: US region gateways

7.3.5 LoRa Radio Card (EU)

There are three mandatory channels for gateways that operate in the EU region. These channels are 868.1, 868.3, and 868.5.

The EU region bands have different duty cycles. This is indicated with a grey background box and label in Figure 27. A higher duty cycle allows higher throughput.

The EU region specifies *keep out* areas in the allowed frequencies. These are highlighted in red on the illustration. The interface displays a warning if a channel lies in a keep-out area.

7.3.6 LoRa Radio Card (Australia)

If the gateway is the Australia variant, the user may toggle between the AU923 and AU915 regions through the web UI on the gateway. A factory reset must be performed on the device after toggling between AU923 and AU915. No other regions are end-user selectable.

Update Firmware				Si	ave
Save/Restore Settings					
Remote Logging					
Remote Management Service					
Gateway Config					
Reboot					

7.3.6.1 AU923

The region code is AU923. This is an AS923 region, therefore there are two mandatory channels: 923.2 and 923.4. The firmware will restrict the operation to the legal regulatory limits for this region. These limits include frequency, duty cycle, dwell time, and power restrictions. If the network server requests to transmit in an illegal manner, the packet will be dropped. In the case of TX power, the TX power will be clipped to the highest allowable power if the requested power exceeds the legal limit for this region.

7.3.6.2 AU915

The region code is AU915. This is not an AS923 region with no mandatory channel requirements. The firmware will restrict the operation to the legal regulatory limits for this region. These limits include frequency, duty cycle, dwell time, and power restrictions. If the network server requests to transmit in an illegal manner, the packet will be dropped. In the case of TX power, the TX power will be clipped to the highest allowable power if the requested power exceeds the legal limit for this region.

7.3.7 LoRa Radio Card (New Zealand)

The region code is NZ. This is an AS923 region, therefore there are two mandatory channels: 923.2 and 923.4. The firmware will restrict the operation to the legal regulatory limits for this region. These limits include frequency, duty cycle, dwell time, and power restrictions. If the network server requests to transmit in an illegal manner, the packet will be dropped. In the case of TX power, the TX power will be clipped to the highest allowable power if the requested power exceeds the legal limit for this region.

7.3.8 LoRa Radio Card (Taiwan)

The region code is TW. This is an AS923 region, therefore there are two mandatory channels: 923.2 and 923.4. The firmware will restrict the operation to the legal regulatory limits for this region. These limits include frequency, duty cycle, dwell time, and power restrictions. If the network server requests to transmit in an illegal manner, the packet will be dropped. In the case of TX power, the TX power will be clipped to the highest allowable power if the requested power exceeds the legal limit for this region.

7.3.9 LoRa Radio Card (Hong Kong)

The region code is HK. This is an AS923 region, therefore there are two mandatory channels: 923.2 and 923.4. The firmware will restrict the operation to the legal regulatory limits for this region. These limits include frequency, duty cycle, dwell time, and power restrictions. If the network server requests to transmit in an illegal manner, the packet will be dropped. In the case of TX power, the TX power will be clipped to the highest allowable power if the requested power exceeds the legal limit for this region.

7.4 Advanced Configuration

The Advanced page provides additional configuration options for the specific forwarder.

8 MANAGE THE GATEWAY

8.1 Changing Username and Password

To change the login credentials of the gateway, follow these steps:

- 1. In the main menu, click the Settings tab. Then in the left menu, click the User tab (Figure 32).
- 2. Enter the current password, and then the new desired username and password.
- 3. Click Update.

Laird Dashboard LAN Wi-Fi	LoRa Settings	Logout
User	Current password	
Web Session

	Retype new password	
	Update	

Figure 32: Change username and password

8.2 Web Session

The user can change the web session timeout. The web session timeout is the amount of time before the user will be warned and automatically logged out if there is no web activity. Activity is defined as navigating between pages, changing any settings, or polling LoRa traffic. The minimum time, and default, is 5 minutes and the maximum time is 60 minutes. When polling LoRa traffic, the time is set to the maximum of 60 minutes. When polling is stopped, the time out is set back to the saved setting.

8.4 Updating Gateway Firmware

To update the firmware in the gateway, follow these steps:

- 1. Click the Settings tab in the main menu. Then click Update Firmware in the left menu.
- 2. Enter the proper URL. Information about what URL to used can be found below.
- 3. Click Start Update.

Warning: Updating the firmware **MAY** restore the gateway to factory default settings. We advise you to save or make note of any settings the user does not wish to lose beforehand.

8.4.1 Firmware Update URLs

IMPORTANT: Please follow the instructions based on the firmware version currently running on the gateway.

8.4.1.1 93.7.1.13 (GA1) Firmware

If the gateway is running version 93.7.1.13 firmware the user should use this link to upgrade to the next version:

https://www.lairdtech.com/products/rg1xx-lora-gateway/firmware/GA1.1/fw.txt

After updating with this link, the gateway will be running version 93.7.1.14. Follow the instructions for that version to update to the latest version of firmware.

8.4.1.2 93.7.1.14 Firmware

If the gateway is running version 93.7.1.14 firmware the user should use this link to upgrade to the next version:

https://www.lairdtech.com/products/rglxx-lora-gateway/firmware/GA2.1/fw.txt

After updating with this link, the gateway will be running version 93.7.2.10. Follow the instructions for that version to update to the latest version of firmware.

WARNING: This upgrade performs a factory reset on the gateway.

8.4.1.3 93.7.2.9 (GA2) Firmware

If the gateway is running version 93.7.2.9 firmware the user should use this link to upgrade to the next version:

https://www.lairdtech.com/products/rg1xx-lora-gateway/firmware/GA2.1/fw.txt

After updating with this link, the gateway will be running version 93.7.2.10. Follow the instructions for that version to update to the latest version of firmware.

WARNING: This upgrade performs a factory reset on the gateway.

8.4.1.4 93.7.2.10 Firmware

If the gateway is running version 93.7.2.10 firmware the user should use this link to upgrade to the next version:

https://www.lairdtech.com/products/rg1xx-lora-gateway/firmware/newest/fw.txt

After updating with this link, the gateway will be running GA3 firmware (93.7.3.x) or newer. Follow the instructions for that version to update to the latest version of firmware.

8.4.1.5 93.7.3.x Firmware and Newer

GA3 firmware (93.7.3.x) and newer versions have a feature to automatically notify the user if new firmware is available and what link to download the firmware from.

8.4.1.6 93.8.4.x Firmware

If the gateway is running version 93.8.4.x firmware the user should use this link to upgrade to the next version:

https://www.lairdtech.com/products/rglxx-lora-gateway/firmware/newest/fw.txt

After updating with this link, the gateway will be running GA4 firmware (93.8.4.x) or newer. Follow the instructions for that version to update to the latest version of firmware.

The firmware update process downloads the firmware to the gateway and then flashes it.

8.5 Save/Restore Settings

All the settings in the gateway can be saved and restored. This is useful for backing up all settings before a factory reset or firmware upgrade. Settings are saved to a JSON file and can be restored on another gateway.

Note: Any security related settings like credentials and security certificates are not saved in the JSON file for security reasons. That means security-related settings cannot be restored onto a separate gateway. Security related settings are only saved on the current gateway and can be restored on the same gateway.

Figure 38: Save/Restore settings

After restoring settings, the gateway must be rebooted for changes to take effect.

8.6 Remote Management

The gateway can be managed remotely via TR-069. This requires an externally hosted Auto Configuration Server (ACS) to use this feature. This allows system administrator to access the gateways without needing physical access to the gateway or access behind a firewall. The gateway will periodically initiate connections with the ACS allowing a user to remotely update LoRa configuration settings, update firmware, download logs, etc.

8.6.1 Configuring the Gateway for Remote Management

The user must point the device to your external ACS. This is done under **Settings->Remote Management Service**. This is a one-time setting that is preserved across firmware updates. The URL must be updated, including the port number. In a standard ACS installation, this is usually **port 7547** but that can vary. Consult your ACS provider for the URL, port number, username, and password. The username and password fields are for connections initiated by the gateway. Not for connections initiated by the ACS. The parameter key is optional. Press the update button when all parameters are correctly entered.

Figure 39: Save/Restore settings

8.6.2 Updating Firmware Remotely

This works much like it does with the web User Interface (UI). When the system administrator has a new firmware release to load, they will update the InternetGatewayDevice.Laird.GatewayManagement.Versions.FirmwareUpdateURL. The value is the link to download the firmware. This link always points to a fw.txt file. Once that is done, the gateway will respond with success, and download the firmware in the background. A remote user would then poll for

InternetGatewayDevice.Laird.GatewayManagement.Versions.FirmwareUpdateStatus to be set to "1" indicating that the firmware was successfully downloaded and is ready to reboot to switch to the new firmware. The system administrator would then issue the TR-069 "Reboot" command to reboot the device. After the reboot, the gateway will check in again and be running the new version. Note that settings (including remote management) are preserved across a firmware update.

8.6.3 Uploading Configuration Files

Configuration files and certificates can be uploaded to the device. These configuration files are called vendor configuration files in TR-069. An ACS can be commanded to push these to a device or group of devices. The vendor configuration file can change a number of settings in bulk. It is useful to (re)configure a batch of new devices in the field. These settings include, LAN, WiFi, and LoRa radio settings. A strategy to deploy configurations to the field is to modify a unit locally to the way you want it. Download the configuration file via TR-069 from a locally configured gateway, then upload that generated configuration file to be pushed to all the units once the system administrator is satisfied that all of the settings are correct on the golden unit. A download is initiated by the ACS with the type "3 Vendor Configuration File". The ACS will not put a file extension on the downloaded file. It is a compressed tarball (.tar.gz) file.

8.6.4 Downloading a Log File

Initiate a download by the ACS with type "2 Vendor Log File". This will return the log data. The same log data that can be obtained by the web interface. It is viewable with a text editor.

8.6.5 The Sentrius Gateway's TR-069 Data Model

The following tables show all of the parameters supported by the gateway along with a description of each. Each entry in the table is designated as read (R), write (W), or object (O). The items designated as objects are nodes in the data model. All parameters are designated with an R, W, or both.

The root of the data model is InternetGatewayDevice.

8.6.5.1 InternetGatewayDevice.Laird.DeviceInfo

Table 2: InternetGatewayDevice.Laird.DeviceInfo

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.DeviceInfo	0	Device info node	N/A
InternetGatewayDevice.DeviceInfo.SpecVersion	R	Version of the TR-069 spec referenced by this implementation	N/A
InternetGatewayDevice.DeviceInfo.ProvisioningCode	R	Code set by the ACS to indicate completed provisioning	N/A
InternetGatewayDevice.DeviceInfo.Manufacturer	R	Device manufacturer	N/A
InternetGatewayDevice.DeviceInfo.ManufacturerOUI	R	MAC address OUI value for the manufacturer	N/A
InternetGatewayDevice.DeviceInfo.ProductClass	R	Product type	N/A
InternetGatewayDevice.DeviceInfo.SerialNumber	R	Unique value assigned to each device at production	N/A
InternetGatewayDevice.DeviceInfo.HardwareVersion	R	Hardware version	N/A
InternetGatewayDevice.DeviceInfo.SoftwareVersion	R	Software version	N/A
InternetGatewayDevice.DeviceInfo.MemoryStatus	0	MemoryStatus node	N/A
InternetGatewayDevice.DeviceInfo.MemoryStatus.Total	R	Total system memory	N/A
InternetGatewayDevice.DeviceInfo.MemoryStatus.Free	R	Total free system memory	N/A
InternetGatewayDevice.DeviceInfo.UpTime	R	Total up time	N/A
InternetGatewayDevice.DeviceInfo.DeviceLog	R	Unused in our implementation. Request an upload of type 4 Vendor Log File via the ACS	N/A
InternetGatewayDevice.DeviceInfo.ModelName	R	Model name	N/A

8.6.5.2 InternetGatewayDevice.Laird.ActiveProfileSettings

Tabla	2. Intorno	Cotowov/	Dovino I ni	rd ActiveD	rofileSottinge
Iaple	S. IIIterne	lGalewayL	Jevice.Lai	la.Acuver	romeseumys

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.ActiveProfileSettings	0	Active Wi-Fi profile node	N/A
InternetGatewayDevice.Laird.ActiveProfileSettings.ProfileName	R/W	Wi-Fi profile name (not SSID)	String representing the profile name
InternetGatewayDevice.Laird.ActiveProfileSettings.SSID	R/W	Wi-Fi network SSID	String representing the SSID
InternetGatewayDevice.Laird.ActiveProfileSettings.PSK	W	Wi-Fi network preshared key	String representing the PSK
InternetGatewayDevice.Laird.ActiveProfileSettings.ClientName	R/W	Wi-Fi network client name	A string representing name client name.
InternetGatewayDevice.Laird.ActiveProfileSettings.TxPower	R	TX power	A numeric value representing TX power
InternetGatewayDevice.Laird.ActiveProfileSettings.AuthType	R/W	Wi-Fi network authentication type	open, shared, or eap
InternetGatewayDevice.Laird.ActiveProfileSettings.EAPType	R/W	Wi-Fi network EAP type	leap, eap-fast, peap-mschapv2, eap-tls, peap-tls
InternetGatewayDevice.Laird.ActiveProfileSettings.WEPType	R/W	Wi-Fi network WEP type	none, wep, wep-eap, psk, tkip, wpa2-psk, wpa2-aes, cckm-tkip, cckm-aes, wpa-psk-aes, wpa-aes
InternetGatewayDevice.Laird.ActiveProfileSettings.Mode	R/W	Wi-Fi network mode	BGN

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.ActiveProfileSettings.Powersave	R	Is power save enabled	off,max,fast
InternetGatewayDevice.Laird.ActiveProfileSettings.PSPDelay	R	Power save delay	A value 10 - 500 in milliseconds
InternetGatewayDevice.Laird.ActiveProfileSettings.Username	R/W	Username used by some authentication methods	A string representing the username
InternetGatewayDevice.Laird.ActiveProfileSettings.Password	W	Password used by some authentication methods	A string representing the password

8.6.5.3 InternetGatewayDevice.Laird.WIFIGlobalSettings

Table 4: InternetGatewayDevice.Laird.WIFIGlobalSettings

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.WIFIGlobalSettings	0	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.UAPSD	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.WMM	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.AChannelSet	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.AuthServerType	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.AutoProfile Off	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.BGChannelSet	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.BeaconMissTime	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.CCXFeatures	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.CertificatePat	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.DateCheck	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.DefaultAdhocCh	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.DFSChannels	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.FIPSMode	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.IgnoreNullSSID	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.PMKCaching	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.ProbeDelay	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.RegulatoryDomain	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.RoamPeriodMs	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.RoamTrigger	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.RTSThreshold	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.ScanDFSTime	R	Hardcoded Wi-Fi settings in the gateway	N/A
InternetGatewayDevice.Laird.WIFIGlobalSettings.TTLSInnerMethod	R	Hardcoded Wi-Fi settings in the gateway	N/A

8.6.5.4 InternetGatewayDevice.Laird.LORASettings

Table 5: InternetGatewayDevice.Laird.LORASettings

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.LORASettings	0	Gateway LoRa settings	N/A
InternetGatewayDevice.Laird.LORASettings.EUI	R	The gateway's unique identifier	N/A
InternetGatewayDevice.Laird.LORASettings.Mode	R/W	Chosen packet forwarder type	ttn, mqtt, or semtech

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.LORASettings.Region	R	Region of operation to which the gateway is configured	N/A
InternetGatewayDevice.Laird.LORASettings.MQTTServer	R/W	loraserver.io network server URL	The URL of the server.
InternetGatewayDevice.Laird.LORASettings.MQTTUsername	R/W	The MQTT forwarder user name	User name string
InternetGatewayDevice.Laird.LORASettings.MQTTPassw	W	The MQTT forwarder password	Password string
InternetGatewayDevice.Laird.LORASettings.MQTTSkipCRC	R/W	Determines whether/not packets with CRC errors are forwarded	true, false
InternetGatewayDevice.Laird.LORASettings.STServer	R/W	Network server URL when using the legacy Semtech UDP packet forwarder	Server URL
InternetGatewayDevice.Laird.LORASettings.STPortUp	R/W	Semtech packet forwarder port	A 2- to 4-digit port number.
InternetGatewayDevice.Laird.LORASettings.STPortDown	R/W	Semtech packet forwarder port	A 2- to 4-digit port number.
InternetGatewayDevice.Laird.LORASettings.STKeepAlive	R/W	Semtech packet forwarder keep alive timeout	A value in milliseconds
InternetGatewayDevice.Laird.LORASettings.STPushTimeout	R/W	This is the push timeout used by the semtech packet forwarder.	A value in milliseconds
InternetGatewayDevice.Laird.LORASettings.STStatInterval	R/W	Semtech packet forwarder stat interval	A value in milliseconds
InternetGatewayDevice.Laird.LORASettings.STForwardCRCValid	R/W	Determines whether/not packets with CRC errors are forwarded	true, false
InternetGatewayDevice.Laird.LORASettings.STForwardCRCError	R/W	Determines whether/not packets with CRC errors are forwarded	true, false
InternetGatewayDevice.Laird.LORASettings.STForwardCRCDisabled	R/W	Determines whether/not packets CRC errors are forwarded	true, false
InternetGatewayDevice.Laird.LORASettings.TTNGatewayID	R	TTN gateway ID	N/A
InternetGatewayDevice.Laird.LORASettings.TTNGatewayKey	W	Gateway key to access your TTN network server	TTN network server gateway key string
InternetGatewayDevice.Laird.LORASettings.TTNRouter	R/W	The router to access your TTN network server	TTN router URL
InternetGatewayDevice.Laird.LORASettings.TTNAuthServer	R/W	The authentication server to access your TTN network server.	TTN authentication server URL
InternetGatewayDevice.Laird.LORASettings.TTNDiscoveryServer	R/W	The discovery server to access your TTN network server	TTN discovery server URL
InternetGatewayDevice.Laird.LORASettings.RadioConfig	R	The radio settings including channel plan used by the Legacy Semtech UDP packet forwarder	N/A

8.6.5.5 InternetGatewayDevice.Laird.LANSettings

TADIE 0. IIIIEI HEIGAIEWAVDEVICE.LAHU.LANSEIIIHUS

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.LANSettings	0	This node contains the LAN settings. These are not writeable as parameters	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4	0	IPv4 settings	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4.DNSServer1	R	The first DNS server	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4.DNSServer2	R	The second DNS server	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4.DeviceAddr	R	Gateway IP address	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4.NetMask	R	The netmask	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4.Broadcast	R	The broadcast IP address	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4.ExtGWIP	R	Gateway IP address (not necessarily external)	N/A
InternetGatewayDevice.Laird.LANSettings.IPv4.IPMethod	R	IP mode (DHCP or static)	N/A
InternetGatewayDevice.Laird.LANSettings.IPv6	0	IPv6 settings	N/A
InternetGatewayDevice.Laird.LANSettings.IPv6.DeviceAddr	R	IPv6 address	N/A

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.LANSettings.IPv6.Mask	R	IPv6 net mask	N/A
InternetGatewayDevice.Laird.LANSettings.IPv6.IPMethod	R	IPv6 mode	N/A
InternetGatewayDevice.Laird.LANSettings.IPv6.AutoDHCPMethod	R	IPv6 auto DHCP mode	N/A

8.6.5.6 InternetGatewayDevice.Laird.GatewayManagement

Table 7: InternetGatewayDevice.Laird.GatewayManagement

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.GatewayManagement	0	Version information and how to initiate a firmware update	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions	0	Contains version information	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.SDK	R	SDK version	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.Driver	R	Driver package version	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.Supplicant	R	Wi-Fi supplicant version	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.Build	R	Build version	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.HardwareChipset	R	Hardware chipset	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.Firmware	R	Wi-Fi firmware version	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.CLI	R	SDC CLI version	N/A
InternetGatewayDevice.Laird.GatewayManagement.Versions.FirmwareUpdateURL	R/W	URL to point to a new firmware version	String with the URL pointing to a <i>fw.txt</i> file with the firmware hosted on an external server
$\label{eq:linear} Internet Gateway Device. Laird. Gateway Management. Versions. Firmware Update Status$	R	Status of the firmware update (1 = complete, 0 = not complete)	N/A

8.6.5.7 InternetGatewayDevice.Laird.SavedProfileSettings

Table 8: InternetGatewayDevice.Laird.SavedProfileSettings

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.SavedProfileSettings	0	Node to modify saved profile settings	N/A
InternetGatewayDevice.Laird.SavedProfileSettings.ListProfiles	R	List of all gateway Wi-Fi profiles	N/A
InternetGatewayDevice.Laird.SavedProfileSettings.ProfileName	R/W	Wi-Fi profile alias that the user wants to modify	String representing the profile name
InternetGatewayDevice.Laird.SavedProfileSettings.AddProfile	R/W	Adds a new profile	String representing the profile name
InternetGatewayDevice.Laird.SavedProfileSettings.DeleteProfile	R/W	Deletes a profile	String representing the profile name
InternetGatewayDevice.Laird.SavedProfileSettings.SSID	R/W	SSID for the selected Wi-Fi profile	String representing the SSID
InternetGatewayDevice.Laird.SavedProfileSettings.PSK	R/W	PSK for the selected Wi-Fi profile	String representing the PSK
InternetGatewayDevice.Laird.SavedProfileSettings.ClientName	R/W	Client name for the selected Wi-Fi profile	String representing name client name
InternetGatewayDevice.Laird.SavedProfileSettings.TxPower	R/W	TX power for the selected Wi-Fi profile	A numeric value representing TX power
InternetGatewayDevice.Laird.SavedProfileSettings.AuthType	R/W	Authentication type for the selected Wi- Fi profile	open, shared, or eap

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.Laird.SavedProfileSettings.EAPType	R/W	EAP type for the selected Wi-Fi profile	leap, eap-fast, peap- mschapv2, eap-tls, peap- tls
InternetGatewayDevice.Laird.SavedProfileSettings.WEPType	R/W	WEP type for the selected Wi-Fi profile	none, wep, wep-eap, psk, tkip, wpa2-psk, wpa2-aes, cckm-tkip, cckm-aes, wpa- psk-aes, wpa-aes
InternetGatewayDevice.Laird.SavedProfileSettings.Mode	R/W	Selected Wi-Fi profile mode	BGN
InternetGatewayDevice.Laird.SavedProfileSettings.Powersave	R/W	Displays the enabled power save mode	off,max,fast
InternetGatewayDevice.Laird.SavedProfileSettings.PSPDelay	R/W	Selected Wi-Fi profile's power save delay	A value 10 - 500 in units of milliseconds.
InternetGatewayDevice.Laird.SavedProfileSettings.Username	R/W	Wi-Fi profile username used by some authentication methods	Username string
InternetGatewayDevice.Laird.SavedProfileSettings.Password	W	Wi-Fi profile password used by some authentication methods	Password (write only) string

8.6.5.8 InternetGatewayDevice.ManagementServer

Table 9: InternetGatewayDevice.ManagementServer			
Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.ManagementServer	0	Standard TR-069 Management Server node	
InternetGatewayDevice.ManagementServer.ConnectionRequestURL	R/W	URL for the ACS to use to initiate a connection	URL used by the ACS to initiate a connection with the gateway
InternetGatewayDevice.ManagementServer.ParameterKey	R/W		String representing the parameter key (opt.)
InternetGatewayDevice.ManagementServer.PeriodicInformTime	R/W	Time of the last inform message	String representing the time of the last inform message
InternetGatewayDevice.ManagementServer.PeriodicInformInterval	R/W	Interval for the periodic inform message	Numeric value representing the periodic inform interval
InternetGatewayDevice.ManagementServer.PeriodicInformEnable	R/W	Enables periodic inform	true, false
InternetGatewayDevice.ManagementServer.Password	W	Password used to initiate a connection with the ACS	String representing the password for connections initiated by the gateway
InternetGatewayDevice.ManagementServer.ConnectionRequestUsername	R/W	Username used for the ACS to initiate a connection with the gateway	String representing the username for connections initiated by the ACS
InternetGatewayDevice.ManagementServer.ConnectionRequestPassword	W	Password used for the ACS to initiate a connection with the gateway	String representing the password for connections initiated by the ACS
InternetGatewayDevice.ManagementServer.Username	R/W	Username for the gateway to initiate a connection with the ACS	String representing the username for connections initiated by the gateway
InternetGatewayDevice.ManagementServer.URL	R/W	URL for the gateway to initiate a connection with the ACS	URL used by the gateway to initiate a connection with the ACS

8.6.5.9 InternetGatewayDevice.WANDevice

Table 10: InternetGatewayDevice.WANDevice

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.WANDevice	0	Standard node for Wi-Fi endpoint configuration. Only one Wi- Fi connection is allowed on this gateway	N/A
InternetGatewayDevice.WANDevice.{x}	0	Sub-node for each Wi-Fi device. Only one Wi-Fi connection allowed on this gateway	N/A
InternetGatewayDevice.WANDevice.{x}.WANConnectionDevice	0	Sub-node for each Wi-Fi device. Only one Wi-Fi connection is allowed on this gateway	N/A
InternetGatewayDevice.WANDevice.{x}.WANConnectionDevice.{y}	0	Sub-node for each WiFi device. Only one Wi-Fi connection is allowed on this gateway	N/A
InternetGatewayDevice.WANDevice.{x}.WANConnectionDevice.{y}.WANIPConnection	0	Sub-node for each Wi-Fi device. Only one Wi-Fi connection is allowed on this gateway	N/A
InternetGatewayDevice.WANDevice.{x}.WANConnectionDevice.{y}.WANIPConnection.{z}	Ο	Sub-node for each Wi-Fi device. Only one Wi-Fi connection is allowed on this gateway	N/A
InternetGatewayDevice.WANDevice.{x}.WANConnectionDevice.{y}.WANIPConnection.{z}.ConnectionStatus	R	Connection status	N/A
InternetGatewayDevice.WANDevice.{x}.WANConnectionDevice.{y}.WANIPConnection.{z}.ExternalIPAddress	R	IP address (not necessarily external)	N/A
$InternetGatewayDevice.WANDevice.\{x\}.WANConnectionDevice.\{y\}.WANIPConnection.\{z\}.MACAddressing the term of te$	R	MAC address	N/A

8.6.5.10 InternetGatewayDevice.IPPingDiagnostics

Table 11: InternetGatewayDevice.IPPingDiagnostics

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.IPPingDiagnostics	0	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.DiagnosticsState	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.Host	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.NumberOfRepetitions	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.Timeout	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.DataBlockSize	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.SuccessCount	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.AverageResponseTime	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.MinimumResponseTime	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.MaximumResponseTime	R	Diagnostic data for the IP connections	N/A
InternetGatewayDevice.IPPingDiagnostics.FailureCount	R	Diagnostic data for the IP connections	N/A

8.6.5.11 InternetGatewayDevice.LANDevice

Table 12: InternetGatewayDevice.LANDevice

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.LANDevice	0	Defines Wi-Fi settings	N/A
InternetGatewayDevice.LANDevice.{x}	0	Defines Wi-Fi settings	N/A
InternetGatewayDevice.LANDevice.{x}.WLANConfiguration	0	Defines Wi-Fi settings	N/A
InternetGatewayDevice.LANDevice.{x}.WLANConfiguration.{y}	0	Defines Wi-Fi settings	N/A
InternetGatewayDevice.LANDevice.{x}.WLANConfiguration.{y}.Enable	R/W	Enables the specific Wi-Fi device	true, false
InternetGatewayDevice.LANDevice.{x}.WLANConfiguration.{y}.RadioEnable	R/W	Enables the specific Wi-Fi device	true, false
InternetGatewayDevice.LANDevice.{x}.WLANConfiguration.{y}.SSID	R/W	Enables the specific Wi-Fi device	Represents the SSID of the active Wi-Fi profile

8.6.5.12 Internet Gateway Device. WiFi

Table 13: InternetGatewayDevice.WiFi

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.WiFi	0	The TR-181 Wi-Fi node.	N/A
InternetGatewayDevice.WiFi.Radio	0	Sub-node for each Wi-Fi radio (only one on the gateway)	N/A
InternetGatewayDevice.WiFi.Radio.{x}	0	Sub-node for the Wi-Fi radio settings for each Wi-Fi radio (only one on the gateway)	N/A
InternetGatewayDevice.WiFi.Radio.{x}.AutoChannelEnable	R	Whether/not auto channel is enabled	N/A
InternetGatewayDevice.WiFi.Radio.{x}.Enable	R	Whether/not the interface is enabled	N/A
InternetGatewayDevice.WiFi.Radio.{x}.Status	R	Interface status	N/A
InternetGatewayDevice.WiFi.Radio.{x}.Name	R	Interface name	N/A
InternetGatewayDevice.WiFi.Radio.{x}.SupportedFrequencyBands	R	Supported Wi-Fi frequencies	N/A
InternetGatewayDevice.WiFi.Radio.{x}.OperatingFrequencyBand	R	Currently used Wi-Fi frequencies	N/A

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.WiFi.Radio.{x}.ChannelsInUse	R	Whether/not the channel is in use	N/A
InternetGatewayDevice.WiFi.Radio.{x}.Channel	R	Indicates the applicable channel	N/A
InternetGatewayDevice.WiFi.Radio.{x}.AutoChannelSupported	R	Whether/not auto channel is supported	N/A
InternetGatewayDevice.WiFi.Radio.{x}.OperatingStandards	R	Supported Wi-Fi modes	N/A
InternetGatewayDevice.WiFi.SSID	0	SSID node	N/A
InternetGatewayDevice.WiFi.SSID.{x}	0		N/A
InternetGatewayDevice.WiFi.SSID.{x}.Enable	R/W	Whether/not SSID is enabled	true, false
InternetGatewayDevice.WiFi.SSID.{x}.Status	R	SSID status	N/A
InternetGatewayDevice.WiFi.SSID.{x}.Name	R/W	SSID profile name	The profile name string
InternetGatewayDevice.WiFi.SSID.{x}.LowerLayers	R/W	Reference to the radio in the data model	Reference in the data model to the active radio string
InternetGatewayDevice.WiFi.SSID.{x}.SSID	R/W	SSID	SSID for your Wi-Fi network string
InternetGatewayDevice.WiFi.SSID.{x}.X_IPInterface	R/W	Reference to the IP interface in the data model	The reference to the IP interface in the data model string
InternetGatewayDevice.WiFi.EndPoint	0	Defines each endpoint (Wi-Fi profile)	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}	0		N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles	0		
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}	0		N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security	0	Sub-node that defines the security settings used in the Wi-Fi profile.	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.WEPKey	R/W	WEP key when WEP mode is enabled	A string representing the WEP key.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.PreSharedKey	W	PSK used for various security modes. Either the passphrase or pre-shared key can be entered here.	A string representing the PSK.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.KeyPassphras	W	Passphrase for the WPA/WPA2 security. Either the passphrase or pre-shared key can be entered here.	A string representing the PSK.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.ModeEnabled	R/W	Displays the enabled security mode. These are the standard TR-181 security type strings	A string selected from InternetGatewa yDevice.WiFi.E ndPoint.{x}.Sec urity.ModesSup ported.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.AuthType	R/W	Indicates which authentication mode is enabled	open, shared, or eap
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.EAPType	R/W	Indicates which EAP mode is enabled	leap, eap-fast, peap- mschapv2, eap-tls, peap- tls
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.Username	R/W	Username used for authentication	A string representing the username.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.Password	W	Password used for authentication	A string representing the password.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.CACertificate	R/W	Certificate file path	A string representing the path to the CA certificate.

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.UserCertName	R/W	Certificate name	A string representing the certificate name.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.UserCertPass word	W	Certificate password	A string representing the certificate path.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.PACName	R/W	PAC file name	A string representing the PAC name.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Security.PACPassword	W	The PAC file password	A string representing the PAC password.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Enable	R/W	Whether/not the profile is enabled	true, false
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Alias	R/W	Profile name	A string representing the WiFi profile name.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.SSID	R/W	Profile SSID	A string representing the WiFi network SSID.
InternetGatewayDevice.WiFi.EndPoint.{x}.Profiles.{y}.Status	R	Connection status	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.Security	0	Defines security supported by the gateway	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.Security.ModesSupported	R	Comma-separated list of supported security modes	N/A
$InternetGatewayDevice.WiFi.EndPoint.\{x\}.ProfileNumberOfEntries$	R	Number of profiles	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.SSIDReference	R	Data model reference to the SSID for the currently active profile	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.ProfileReference	R	Profile reference for the currently active profile	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.Status	R	Profile status	N/A
InternetGatewayDevice.WiFi.EndPoint.{x}.Enable	R/W		true, false

8.6.5.13 InternetGatewayDevice.IP

Table 14: InternetGatewayDevice.IP

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.IP	0	This node provides stats for all the IP interfaces. There are 2 on the gateway, eth0 and wlan0.	N/A
InternetGatewayDevice.IP.Interface	0		N/A
InternetGatewayDevice.IP.Interface.{x}	0		N/A
InternetGatewayDevice.IP.Interface.{x}.Stats	0		N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.DiscardPacketsReceived	R	The number of discarded packets (RX).	N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.DiscardPacketsSent	R	The number of discarded packets (TX).	N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.ErrorsReceived	R	The number of RX errors.	N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.PacketsReceived	R	The number of packets (RX).	N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.PacketsSent	R	The number of packets (TX).	N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.BytesReceived	R	The number of bytes (RX).	N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.BytesSent	R	The number of bytes (TX).	N/A
InternetGatewayDevice.IP.Interface.{x}.Stats.ErrorsSent	R	The number of TX errors.	N/A

Parameter Name	R/W	Description	Input Data
InternetGatewayDevice.IP.Interface.{x}.IPv4Address	0	IPv4 Settings for the particular IP interface.	N/A
InternetGatewayDevice.IP.Interface.{x}.IPv4Address.{y}	0		N/A
InternetGatewayDevice.IP.Interface.{x}.IPv4Address.{y}.SubnetMask	R	The subnet mask.	N/A
InternetGatewayDevice.IP.Interface.{x}.IPv4Address.{y}.Enable	R	Is this interface enabled.	N/A
InternetGatewayDevice.IP.Interface.{x}.IPv4Address.{y}.AddressingType	R	The addressing type.	N/A
InternetGatewayDevice.IP.Interface.{x}.IPv4Address.{y}.IPAddress	R	The current IP address.	N/A
InternetGatewayDevice.IP.Interface.{x}.IPv4AddressNumberOfEntries	R	The number of IPv4 entries in this node (only 1 for the gateway)	N/A
InternetGatewayDevice.IP.Interface.{x}.Type	R	The type of IP interface.	N/A
InternetGatewayDevice.IP.Interface.{x}.Name	R	The name of the interface.	N/A
InternetGatewayDevice.IP.Interface.{x}.Enable	R	Is the interface enabled.	N/A

8.7 Debug

At the bottom of the web UI is a debug pane that can be used to view system logs on the gateway. Click the arrow buttons to expand or collapse the debug pane. To start or stop debug log polling, click **Auto Update Logs**.

Figure 40: Debug info

8.8 Factory Reset

To factory reset the gateway back to default settings, complete the following steps:

1. Hold the user button while power is applied OR hold the user button while you press the reset button (Figure 41).

Figure 41: Performing a factory reset

- 2. Continue to hold the user button until all the LEDs on the top begin to flash.
- 3. Once the LEDs start flashing, release the user button.
- 4. The factory defaults are applied, the gateway reboots, and it is ready to use.

8.9 Bluetooth

At this time the Bluetooth and Bluetooth Low Energy functionality onboard the RG1xx Gateway is not enabled. Please visit the RG1xx page on Lairdconnect.com for more information: https://www.lairdconnect.com/wirelessmodules/lorawan-solutions/sentrius-rg1xx-lora-enabled-gateway-wi-fi-bluetooth-ethernet

8.10 Additional information:

For the latest version of this manual, quick start guide, regulatory information and firmware updates, please see the Documentation tab the RG1xx page on Lairdconnect.com: https://www.lairdconnect.com/wireless-modules/lorawan-solutions/sentrius-rg1xx-lora-enabled-gateway-wi-fi-bluetooth-ethernet

LoRa and Wi-Fi antennas

Power supply module

CAT6 Ethernet module

Moulded plastic cover

9.1 Specification

Interfaces	Wired	CAT6 Ethernet - RJ45 Connector
		LED Data Communication Ports (2) Optional Data Communication/Power Ports Available for Expansion (2)
	Wireless	Wireless
Power	Supply Voltage	12V/1A
	Power Adapter/Cable	External DC Power Supply (12V/2A rating) with regional plug adapter – Industrial Temperature Rated (supplied by end-user)
	Configuration	Web-based interface via Ethernet/Wi-Fi
Physical	Dimensions	220 x 250 x 70 mm (enclosure only)
Environmental	Operating Temp.	-40° to +85°C
Wi-Fi Antenna	Model	Laird 001-0012 IP67-rated
	Туре	Dipole
	Connector	RP-SMA
	Antenna Gain	2.0 dBi (2.4–2.5 GHz), 2.0 dBi (4.9–5.875 GHz)
LoRa Antenna	Model	Laird 001-0029 IP67-rated (863–870 MHz) used with RG186 Laird 001-0011 IP67-rated (902–928 MHz) used with RG191
	Туре	Dipole
	Connector	RP-SMA
	Antenna Gain	2.0 dBi (863–870 MHz) used with RG186 2.0 dBi (902–928 MHz) used with RG191
Accessories	Included	 1 x 863-870 MHz antenna (with RG186) or 1 x 902-928 MHz antenna (with RG191) Two 2.4/5 GHz Wi-Fi antennas Note: Mounting hardware (wall mount or pole mount available) – sold separately
Enclosure	IP67 Rated	 External enclosure housing for Main Gateway PCB Molded plastic cover Anti-corrosive Die Cast Alloy Frame (AI-Si-Mg)

9.4 Cable Assemblies

9.4.1 Power Supply and Ethernet Module

Figure 47: Power cable (left) and Ethernet (right) assembly components

9.4.2 Assembly Steps

The steps explained below cover the power cable assembly process in detail. The ethernet cable assembly is very similar, however less complex, to work with. In general, place the Ethernet cord through each component and mount to the enclosure. Tighten the Sealing Nut with a **Torque Force of 8 ~ 10 kgf.cm**. The rest of the guide covers the power cord assembly.

Note: To ensure the IP67 rating, the Ethernet cable diameter must be in the range of 4.5 mm – 6.5 mm. If the cable is too small, there is a potential risk of environment factors potentially damaging the internal hardware.

To assemble the power cable, follow these steps:

1. Insert the Ethernet cord through each component – sealing nut (i), clip (ii), sealing (iii), sealing body (iv), gasket (v), and lock nut (vi) (Figure 48).

Figure 48: Insert Ethernet cord

- **Note:** To ensure the IP67 rating, the **cable diameter must be in the range of 5.5 mm 8.0 mm**. If the cable is too small, there is a potential risk of environment factors potentially damaging the internal hardware.
- 2. Use a 1.5 mm screwdriver, preferably an allen wrench, to fix the core wire(s) into the screw fixing point (Figure 49).

Figure 49: Core wire fixed into the screw fixing point

Note: The cable core wires for the power cable assembly need to be in the range of 14 AWG to 18 AWG to fit properly in the screw points. We recommend that you strip and tin the ends of the core cable wires to make the install easier when inserting the wire into the screw points. Range of length tinning wire: 5 mm- 6 mm.

Pin 2 should be negative (black wire) and Pin 1 should be positive (red wire). It is recommended to install an Earth Ground Wire. There are positions available on the enclosure for this (Figure 55).

- 3. Fit the gasket (v), sealing (iii), and clip (ii) onto the sealing body (iv) (Figure 50).
- 4. Fit the lock (vi) and o-ring (ix) onto the housing (vii) (Figure 50).

Figure 50: Steps 3 and 4

5. Screw the sealing nut (i) and the assembled housing (x) onto the assembled sealing body (xi) with a torque force of 8–10 kgf-cm (Figure 51).

Figure 51: Step 5

The assembly is now complete (Figure 52).

Figure 52: Completed assembly

- 6. Mount the completed cables into the keyed power module slot and the Ethernet module slot #8 and #9 from Figure 43.
- 9.5 Mounting Hardware

9.5.1 Wall Mount

Included Mounting Hardware
M6x0.8x10.0 mm, stainless steel screws with washers - 4
5/16 x 11 self-tapping screws, L=25.00 mm – 4
3/4" wall anchors – 4
4" hose clamps – 2
M5x1.0x10.0 mm, stainless steel screws with washers (optional) - 4

Figure 53: Wall Mount

Figure 54: Wall mount dimensions

10 FCC AND ISED CANADA REGULATORY STATEMENTS

This product contains the RG191-M2 and the WB50NBT from Laird.

Model	US/FCC	CANADA/IC
RG191-M2	SQG-1001	3147A-1001
WB50NBT	SQG-WB50NBT	3147A-WB50NBT

10.1 Power Exposure Information

To comply with FCC RF exposure limits for general population/uncontrolled exposure, the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and operating in conjunction with any other antenna or transmitter.

IMPORTANT NOTE: If these conditions cannot be met (for certain configurations or co-location with another transmitter), then the FCC and Industry Canada authorizations are no longer considered valid and the FCC ID and IC Certification Number cannot be used on the final product. In these circumstances, the OEM integrator is responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC and Industry Canada authorization.

10.2 OEM Responsibilities

To comply with FCC and Industry Canada RF exposure limits for general population/uncontrolled exposure, the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and operating in conjunction with any other antenna or transmitter, except in accordance with FCC multi-transmitter product procedures.

WARNING: Changes or modifications not expressly approved by Laird could void the user's authority to operate the equipment.

10.2.1 FCC Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in an installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to correct the interference by one or more of the following measures:

- Re-orient or relocate the receiving antenna
- Increase the separation between the equipment and the receiver
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

10.2.2FCC Warning

This device complies with part 15 of the FCC rules operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

10.2.3 Industry Canada (IC) Warning

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

French equivalent is:

Le présent appareil est conforme aux CNR d'Industrie Canada applicable aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

10.2.4ISED Radiation Exposure Statement

To comply with ISED Canada RF exposure limits for general population / uncontrolled exposure, the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be operating in conjunction with any other antenna or transmitter.

French equivalent is:

Déclaration IC d'exposition aux radiations

Pour se conformer à Industrie Canada RF limites d'exposition pour la population générale / exposition non contrôlée, l'antenne utilisée pour ce transmetteur doit être installée pour fournir une distance d'au moins 20 cm de toutes les personnes et ne doit pas fonctionner en conjonction avec toute autre antenne ou transmetteur.

11 CE REGULATORY

The RG186 has been tested for compliance with relevant standards for the EU market.

Reference the Declaration of Conformities listed below for a full list of the standards that the modules were tested to. Test reports are available upon request.

12 EU DECLARATIONS OF CONFORMITY

Reference standards used for presumption of conformity:

Article Number	Requirement	Reference standard(s)
3.1a	Health and Safety	EN60950-1:2006+A2:2013
		EN 301 489-1 v2.2.0 (2017-03)
3.1b	3.1b Protection requirements – Electromagnetic compatibility	EN 301 489-3 v2.1.1 (2017-03)
		EN 301 489-17 v3.2.0 (2017-03)
	3.2 Means of the efficient use of the radio frequency spectrum (ERM)	EN 300 220-1 v3.1.1 (2017-02)
3.2		EN 300 220-2 v3.1.1 (2017-02)
		EN 300 328 v2.1.1 (2016-11) EN 301 893-v2.1.1 (2017-05)

Declaration:

We, Laird, declare under our sole responsibility that the essential radio test suites have been carried out and that the above product to which this declaration relates is in conformity with all the applicable essential requirements of Article 3 of the EU Radio Equipment Directive 2014/53/EU, when used for its intended purpose.

Place of Issue:	Laird W66N220 Commerce Court, Cedarburg, WI 53012 USA tel: +1-262-375-4400 fax: +1-262-364-2649

13 TELECOMMUNICATIONS REGULATORY AUTHORITY (TRA) COMPLIANCE

The RG186 has been tested for compliance with the relevant standards for the United Arab Emirates (UAE) market.

13.1 Labelling Requirements

The RG186 will contain the following information on the back of the gateway serial number label:

- Registered No (ER61585/18): Registration number allocated by the TRA to the equipment.
 RG186 TRA Registered Number: ER61585/18
- Dealer No (DA72940/18): Dealer registration number allocated by the TRA to the dealer.
 RG186 Dealer Registration Number: DA72940/18

Figure 58: TRA Label Information (Standard GW – Left, AS923 & AU915 Region Supported/Latest Revision – Right)

14 REGION SUPPORTED LABELS

14.1 RG191 Version

The RG191 is the base for all current country variants:

Figure 59: RG191 Region Supported Label

14.2 AS923 & AU915 Regions

All region gateways will have a unique Product ID label which describes the region, any region certification label requirements, and frequency the gateway supports. This label is placed in the blue border shown in Figure 59. All labels are printed in black and white color.
