

## GENERAL DESCRIPTION

The LW54XX Series is an ultra-low noise, high PSRR LDO with enable function that operates from 1.9V to 5.5V. It provides up to 500mA output current.

The features of low noise and high PSRR make LW54XX ideal for noise-sensitive and analog applications.

The LW54XX Series integrate current limit, short circuit, thermal shut down, that protecting IC from being damaged.

Output voltage is selectable from 1.2V to 5.0V which fixed by laser trimming technologies, Step=50mV.

The LW54XX Series is available in SOT23-5L, DFN1x1-4L and DFN2x2-6L packages.

## TYPICAL APPLICATION CIRCUIT

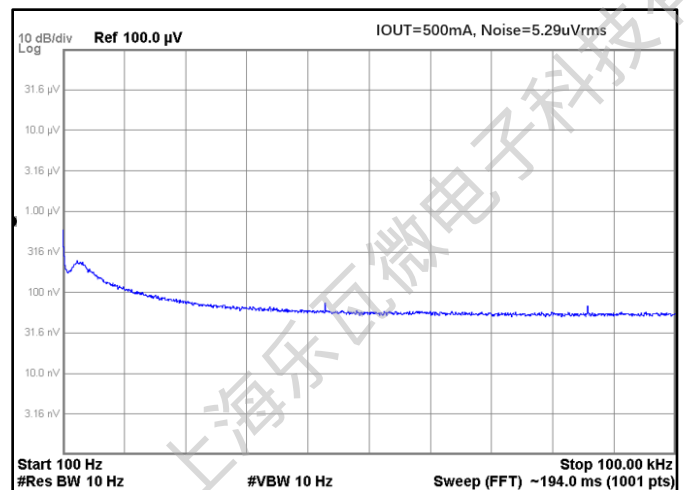

## FEATURES

- Ultra-Low Noise:  $5.29 \mu V_{RMS}$
- Output Accuracy:  $\pm 1\%$
- Low Quiescent Current: 10uA
- Low Dropout Voltage: 33mV@100mA/3.3V
- High PSRR: 90dB@1KHz,10mA
- Output Current: 500mA
- Excellent Line and Load Regulation
- Operating Voltage Range: from 1.9V to 5.5V
- Output Voltage Range: from 1.2V to 5.0V
- Soft-Start Function
- Inrush Current Limit: 250mA
- Over-Temperature Protection
- Current Limiting and Short-Circuit Protection
- Available in SOT23-5L, DFN1x1-4L and DFN2x2-6L Packages

## APPLICATIONS

- Mobile Phones, Tablets, Digital Cameras
- Audio Devices
- RF Modules
- Clock Generator: VCO, PLL, etc.
- Noise-Sensitive Devices: ADC, DAC

## DETAIL OPERATION DESCRIPTION:

The LW54XX is a low noise, high PSRR, low quiescent current, low drop-out voltage regulator. The input voltage range is from 1.9V to 5.5V, and the output current is up to 500mA.

### Error Amplifier

The Error Amplifier (EA) compares the internal reference voltage VREF with the output feedback voltage. Output of the error amplifier (EA) is used to control the gate voltage of P-MOSFET and ensures that the device provides good line and load regulation.

### Current Limit and Short Circuit Protection

LW54XX provides current limit function to prevent the device from damaging during overload or shorted-circuit condition. The output current is limited to 700mA (typ.), and the output short circuit current is limited to 50mA(typ.)

### Thermal Shutdown Protection

When the junction temperature exceeds 160°C(typ.), thermal shutdown is triggered and the device turns off. When the junction temperature falls below 140°C (typ.), the device turns on again.

### Soft-Start and Inrush Current Limit

The inrush current protection circuit is built in the LW54XX. During appr.650μs(typ.) after the EN pin becomes "H", the inrush current is limited at appr.250 mA.

## APPLICATION INFORMATION:

- **Input Capacitor Selection**

Like any low-dropout regulator, the external capacitors used with the LW54XX Series must be carefully selected for regulator stability and performance. Using a capacitor whose value is  $\geq 1\mu\text{F}$  on the LW54XX Series input and the amount of capacitance can be increased without limit. An at least  $10\mu\text{F}$  input capacitor is needed if input ripple voltage  $V_{pp} > 1\text{V}$ . The input capacitor must be located a distance less than 0.5 inch from the input pin of the IC and returned to a clean analog ground. Any good quality ceramic or tantalum can be used for this capacitor. The capacitor with larger value and lower ESR (equivalent series resistance) provides better PSRR and line-transient response.

- **Layout considerations**

To improve ac performance such as PSRR, output noise, and transient response, it is recommended that the PCB be designed with separate ground planes for VIN and VOUT, with each ground plane connected only at the GND pin of the device.

- **Output Capacitor Selection**

The output capacitor must meet both requirements for minimum amount of capacitance and ESR in all LDOs application. The LW54XX Series is designed specifically to work with low ESR ceramic output capacitor in space-saving and performance consideration. Using a ceramic capacitor whose value is at least  $1\mu\text{F}$  on the LW54XX Series output ensures stability. An appropriate output capacitor can reduce noise and improve load transient response and PSRR. The output capacitor should be located not more than 0.5 inch from the VOUT pin of the LW54XX Series and returned to a clean analog ground.
