1、General Description

The CD4538 is a dual retriggerable-resettable monostable multivibrator. Each multivibrator has an active LOW trigger/retrigger input (\overline{nA}), an active HIGH trigger/retrigger input (nB), an overriding active LOW direct reset input (\overline{nCD}), an output (nQ) and its complement (\overline{nQ}), and two pins ($nREXT/CEXT$, and $nCEXT$, always connected to ground) for connecting the external timing components C_{EXT} and R_{EXT} . Typical pulse width variation over the specified temperature range is $\pm 0.2\%$.

The multivibrator may be triggered by either the positive or the negative edges of the input pulse and will produce an accurate output pulse with a pulse width range of 10 μ s to infinity. The duration and accuracy of the output pulse are determined by the external timing components C_{EXT} and R_{EXT} . The output pulse width (t_W) is equal to $R_{EXT} \times C_{EXT}$. The linear design techniques in LOC MOS (Local Oxide CMOS) guarantee precise control of the output pulse width. A LOW level at \overline{nCD} terminates the output pulse immediately.

It operates over a recommended V_{DD} power supply range of 3V to 12V referenced to V_{SS} (usually ground). Unused inputs must be connected to V_{DD} , V_{SS} , or another input.

Features:

- Wide supply voltage range from 3V to 12V
- Tolerant of slow trigger rise and fall times
- Fully static operation
- 5V and 10V parametric ratings
- Standardized symmetrical output characteristics
- Specified from -40°C to $+125^\circ\text{C}$
- Packaging information: DIP16/SOP16/TSSOP16
