**\*1 Measuring method of optical output coupling power****\*2 Power dissipation measuring method**

**\*3 Measuring pulse response**

$$\text{Pulse width distortion } \Delta t_w = t_{PHL} - t_{PLH}$$

**Note**

(1)The impedance of the probe for the oscilloscope must be more than  $1M\Omega$  and less than  $10\text{pf}$ .

**CAUTIONS**

**1. Storage**

- For the devices which are stored out of their original packag for more than eight hours, it is better to bake them at about  $100 \pm 5^\circ\text{C}$  for at least 4 hours before assembling.

**2. ESD (Electrostatic Discharge)**

Static Electricity or power surge will damage the devices.

Suggestions to prevent ESD damage:

- Use of a conductive wrist band or anti-electrostatic glove when handling these devices.
- All devices, equipment, and machinery must be properly grounded.
- Work tables, storage racks, etc. should be properly grounded.
- Use ion blower to neutralize the static charge which might have built up on surface of the device's plastic lens as a result of friction between LEDs during storage and handling.
