LTSA-C191KPKTA

Spec No. :DS22-2019-0015
Effective Date: 01/15/2019
Revision: -

LITE-ON DCC

RELEASE

BNS-OD-FC001/A4

SMD LED LTSA-C191KRKTA

1. Description

SMD LED lamps from Lite-On are available in miniature sizes and special configurations for automated PC board assembly and space-sensitive applications. These SMD LED lamps are suitable for use in a wide variety of electronic equipment, including cordless and cellular phones, notebook computers, network systems, home appliances, and indoor signboard applications

1.1 Features

- Meet RoHS and HF
- Extra Thin(0.55 mm) Chip LED
- Ultra Bright AllnGaP Super Red Chip LED
- 0603 Package in 8mm tape on 7" diameter reels.
- Preconditioning: accelerate to JEDEC level 2
- Qualification refer to AEC-Q101 Rev D
- EIA STD package
- I.C. compatible
- Compatible with automatic placement equipment
- Compatible with infrared reflow solder process

1.2 Applications

- Automotive : accessory application

2. Package Dimensions

Part No.	Lens Color	Source Color
LTSA-C191KRKTA	Water Clear	AllnGaP Red

Notes:

1. All dimensions are in millimeters (inches).
2. Tolerance is ± 0.1 mm (.004") unless otherwise noted.

SMD LED LTSA-C191KRKTA

3. Rating and Characteristics

3.1 Absolute Maximum Ratings at Ta=25°C

Parameter	Symbol	LTSA-C191KRKTA	Unit
Power Dissipation	Pd	75	mW
Peak Forward Current (1/10 Duty Cycle, 0.1ms Pulse Width)	I _{FP}	80	mA
DC Forward Current	I _F	30	mA
Operating Temperature Range	T _{opr}	-40°C to + 100°C	
Storage Temperature Range	T _{stg}	-40°C to + 100°C	
Infrared Soldering Condition	T _{sol}	260 °C For 10 Seconds	

3.2 Suggest IR Reflow Condition For Pb Free Process (Acc. to IPC J-STD-020):

SMD LED LTSA-C191KRKTA

3.3 Electrical / Optical Characteristics at Ta=25°C

Parameter	Symbol	LTSA-C191KRKTA			Unit	Test Condition
		MIN.	TYP.	MAX.		
Luminous Intensity	I_v	28.0		180.0	mcd	$I_F = 20\text{mA}$ Note 1
Viewing Angle	$2\theta_{1/2}$	-	130	-	deg	Note 2
Peak Emission Wavelength	λ_p	-	639	-	nm	Measurement @ Peak (Fig.1)
Dominant Wavelength	λ_d	624.0	-	639.0	nm	$I_F = 20\text{mA}$ Note 3
Spectral Line Half-Width	$\Delta\lambda$	-	20		nm	-
Forward Voltage	V_F	1.60		2.60	V	$I_F = 20\text{mA}$ Note 4
Reverse Current	I_R	-	-	10	μA	$V_R = 5\text{V}$

Notes:

- Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
- $\theta_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- The dominant wavelength, λ_d is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
- Caution in ESD:
Static Electricity and surge damages the LED. It is recommended using a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded
- Reverse voltage (VR) condition is applied to IR test only. The device is not designed for reverse operation

SMD LED LTSA-C191KRKTA

4. Bin Rank

4.1 Bin code list

■ VF Rank

Forward Voltage		Color : <u>Super Red</u> , Unit : V @20mA	
Bin Code	Min.	Max.	
A	1.60	1.80	
B	1.80	2.00	
C	2.00	2.20	
D	2.20	2.40	
E	2.40	2.60	

Tolerance on each Forward Voltage bin is +/-0.1 volt

■ IV Rank

Luminous Intensity		Color : <u>Super Red</u> , Unit: mcd @20mA	
Bin Code	Min.	Max.	
H	28.0	45.0	
J	45.0	71.0	
K	71.0	112.0	
L	112.0	180.0	

Tolerance on each Luminous Intensity bin is +/- 11%

■ Hue Rank

Dominant Wavelength		Color : <u>Super Red</u> , Unit : nm @20mA	
Bin Code	Min.	Max.	
6	624.0	629.0	
7	629.0	634.0	
8	634.0	639.0	

Tolerance for each Dominate Wavelength bin is +/- 1nm

6. User Guide

6.1 Cleaning

Do not use unspecified chemical liquid to clean LED they could harm the package.

If clean is necessary, immerse the LED in ethyl alcohol or in isopropyl alcohol at normal temperature for less one minute.

6.2 Recommend Printed Circuit Board Attachment Pad

6.3 Package Dimensions Of Tape And Reel

Note:

1. All dimensions are in millimeters (inches).

SMD LED LTSA-C191KRKTA

6.4 Package Dimensions of Reel

Notes:

- i. Empty component pockets sealed with top cover tape.
- ii. 7 inch reel-5000 pieces per reel.
- iii. Minimum packing quantity is 500 pieces for remainders.
- iv. The maximum number of consecutive missing lamps is three.
- v. In accordance with ANSI/EIA 481 specifications.

SMD LED LTSA-C191KRKTA

7. Cautions

7.1 Application

The LEDs described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household applications). Consult Liteon's Sales in advance for information on applications in which exceptional reliability is required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as in aviation, transportation, traffic control equipment, medical and life support systems and safety devices).

7.2 Storage

- This product is qualified as Moisture sensitive Level 2 per JEDEC J-STD-020 Precaution when handling this moisture sensitive product is important to ensure the reliability of the product.
- The package is sealed:
The LEDs should be stored at 30°C or less and 90%RH or less. And the LEDs are limited to use within one year, while the LEDs is packed in moisture-proof package with the desiccants inside.
- The package is opened:
The storage ambient for the LEDs should not exceed 30°C temperature or 60% relative humidity. It is recommended that LEDs out of their original packaging are IR-reflowed within one year.
For extended storage out of their original packaging, it is recommended that the LEDs be stored in a sealed container with appropriate desiccant, or in desiccators with nitrogen ambient.
LEDs stored out of their original packaging for more than one year should be baked at about 60 deg C for at least 20 hours before solder assembly.

7.3 Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED if necessary.

7.4 Soldering

Recommended soldering conditions:

Reflow soldering		Soldering iron	
Pre-heat	150~200°C	Temperature	300°C Max.
Pre-heat time	120 sec. Max.	Soldering time	3 sec. Max. (one time only)
Peak temperature	260°C Max.		
Soldering time	10 sec. Max.(Max. two times)		

Notes:

- Because different board designs use different number and types of devices, solder pastes, reflow ovens, and circuit boards, no single temperature profile works for all possible combinations.
- However, you can successfully mount your packages to the PCB by following the proper guidelines and PCB-specific characterization.
- LITE-ON Runs both component-level verification using in-house **KYRAMX98** reflow chambers and board-level assembly. The results of this testing are verified through post-reflow reliability testing. Profiles used at LITE-ON are based on JEDEC standards to ensure that all packages can be successfully and reliably surface mounted. Figure on page3 shows a sample temperature profile compliant to JEDEC standards. You can use this example as a generic target to set up your reflow process. You should adhere to the JEDEC profile limits as well as specifications and recommendations from the solder paste manufacturer to avoid damaging the device and create a reliable solder joint.

SMD LED LTSA-C191KRKTA

7.5 Drive Method

A LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

Circuit model A

Circuit model B

(A) Recommended circuit.

(B) The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.

7.6 ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the LED.

Suggestions to prevent ESD damage:

- Use of a conductive wrist band or anti-electrostatic glove when handling these LEDs.
- All devices, equipment, and machinery must be properly grounded.
- Work tables, storage racks, etc. should be properly grounded.
- Use ion blower to neutralize the static charge which might have built up on surface of the LED's plastic lens as a result of friction between LEDs during storage and handling.

ESD-damaged LEDs will exhibit abnormal characteristics such as high reverse leakage current, low forward voltage, or "no light up" at low currents.

To verify for ESD damage, check for "light up" and VF of the suspect LEDs at low currents.

The VF of "good" LEDs should be >2.0V @0.1mA for InGaN product and >1.4V @0.1mA for AlInGaP product.

SMD LED LTSA-C191KRKTA

8. Reliability Test (According to AEC-Q101 rev D)

Item	Description	Test Condition	# of Lots	Sample size Per lot	Reference Standard
2	Pre-conditioning	MSL 2 125°C, 24 hrs Moisture Soak 85°C/60% 168 hrs Interval: 15mins ~ 4 hours to do IR-Reflow	3	385	JESD22A-113
5b	High Temperature Forward Bias(HTFB 1)	75°C, IF=30mA, 1000hrs	3	77	JESD22A-108
5b+	High Temperature Forward Bias(HTFB 2)	100°C, IF=10mA, 1000hrs	3	77	JESD22A-108
7	Temperature Cycling	-40°C to 100°C 10min 10min 10min 1000 cycles	3	77	JESD22A-104 Append x 6
9a	High Temperature High Humidity Bias	Ta=85 °C, 85 % R.H., IF=20mA, 1000hrs	3	77	JESD22A-101
10alt	Power and Temperature Cycle	-40°C ~ 85°C 10min 10min 10min IF: 20mA, 1 cycle : 2 min on / 2 min. off 15000cycles	3	77	JESD22A-105
11	ESD Characterization	HBM 2000V, CDM 1000V	1	30 each HBM/CDM	AEC Q101-001, and Q101-005
20	Resistance to Solder Heat	T _{sld} =260°C, 10sec. 3ti mes	1	30	JESD22A-111
21	Solderability	T _{sld} =245°C, 5sec. 95% solder cover of lead	1	10	J-STD-002 JESD22B102

Notes: Do Destructive Physical Analysis of accepted parts after H³TRB and TC.

SMD LED LTSA-C191KRKTA

9. Others

The appearance and specifications of the product may be modified for improvement without prior notice.

10. Suggested Checking List

Training and Certification

1. Everyone working in a static-safe area is ESD-certified?
2. Training records kept and re-certification dates monitored?

Static-Safe Workstation & Work Areas

1. Static-safe workstation or work-areas have ESD signs?
2. All surfaces and objects at all static-safe workstation and within 1 ft measure less than 100V?
3. All ionizer activated, positioned towards the units?
4. Each work surface mats grounding is good?

Personnel Grounding

1. Every person (including visitors) handling ESD sensitive (ESDS) items wear wrist strap, heel strap or conductive shoes with conductive flooring?
2. If conductive footwear used, conductive flooring also present where operator stand or walk?
3. Garments, hairs or anything closer than 1 ft to ESD items measure less than 100V*?
4. Every wrist strap or heel strap/conductive shoes checked daily and result recorded for all DLs?
5. All wrist strap or heel strap checkers calibration up to date?

Note: *50V for InGaN LED.

Device Handling

1. Every ESDS items identified by EIA-471 labels on item or packaging?
2. All ESDS items completely inside properly closed static-shielding containers when not at static-safe workstation?
3. No static charge generators (e.g. plastics) inside shielding containers with ESDS items?
4. All flexible conductive and dissipative package materials inspected before reuse or recycle?

Others

1. Audit result reported to entity ESD control coordinator?
2. Corrective action from previous audits completed?
3. Are audit records complete and on file?
