## Photocoupler LTV-155E series

### 1.0 Amp Output Current IGBT Gate Drive Optocoupler with Rail-to-Rail Output Voltage, High CMR.

## 1. DESCRIPTION

The LTV-155E optocoupler is ideally suited for driving power IGBTs and MOSFETs used in motor control inverter applications and inverters in power supply system. It contains an AIGaAs LED optically coupled to an integrated circuit with a power output stage. The 1.0A peak output current is capable of directly driving most IGBTs with ratings up to $1200 \mathrm{~V} / 50 \mathrm{~A}$. For IGBTs with higher ratings, the LTV-155E series can be used to drive a discrete power stage which drives the IGBT gate.

The Optocoupler operational parameters are guaranteed over the temperature range from $-40^{\circ} \mathrm{C} \sim+105^{\circ} \mathrm{C}$.
