

SP2502L Series 3.3V 75A Diode Array

**Description**

The SP2502L provides overvoltage protection for applications such as 10/100/1000 Base-T Ethernet and T3/E3 interfaces. This device has a low capacitance of only 5pF making it suitable for PHY side Ethernet protection and the capability to protect against both longitudinal and differential transients. Furthermore, the SP2502L is rated up to 100A ( $t_p=2/10\mu s$ ) making it suitable for line side protection as well against lightning transients as defined by GR-1089 (intra-building), ITU, YD/T, etc. The application schematic provides the connection information for a PHY side protection scheme of a single differential pair.

Note: Pinout diagrams above shown as device footprint on circuit board.

**Features**

- Lightning protection, IEC 61000-4-5, 75A (8/20 $\mu s$ )
- Low clamping voltage
- Low insertion loss, log-linear capacitance
- Combined longitudinal and metallic protection
- Clamping speed of nanoseconds
- SOIC-8 surface mount package (JEDEC MS-012)
- Lead-Free and RoHS-Compliant

**Functional Block Diagram**

**Applications**

- T1/E1 Line cards
- 10/100/1000 BaseT Ethernet
- T3/E3 and DS3 Interfaces
- STS-1 Interfaces

**Application Example**

The schematic shows protection for a single differential pair as part of a larger high-speed data interface such as Ethernet. The SP2502L provides both metallic (differential) and longitudinal (common mode) protection from lightning induced surge events as specified by regulatory standards such as Telcordia's GR-1089 CORE and ITU K.20 and 21.

The SP2502L protects against both positive and negative induced surge events while the TeleLink fuse provides overcurrent protection for the long term 50/60 Hz power fault events.
