TH1 SERIES

Description

The TH1 Series is a solid-state relay and timer combined into one compact, easy-to-use control. This highly reliable device eliminates the need for a separate solid-state relay. When mounted to a metal surface, it can switch load currents up to 20A steady state, and 200A inrush.

Operation (Delay-on-Make)

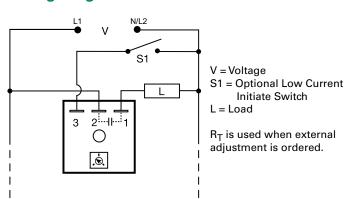

Upon application of input voltage, the time delay begins. The output is de-energized before and during the time delay. At the end of the time delay, the output energizes and remains energized until input voltage is removed.

Reset: Removing input voltage resets the time delay and output.

Features & Benefits

FEATURES	BENEFITS				
Microcontroller based	Repeat Accuracy + / - 2%, Factory calibration + / - 5%				
Compact, low cost design	Allows flexiblility for OEM applications and reduces labor and component costs				
High load currents up to 20A, 200A inrush	Allows direct operation of motors, lamps, and heaters directly without a contactor				
Totally solid state and encapsulated	No moving parts to arc and wear out over time and encapsulated to protect against shock, vibration, and humidity				
Metalized mounting surface	Facilitates heat transfer for high current applications
