150 mV
Bidirectional voltage measurement in a wide range of $\pm$ 600V (maximum indication range $\pm$ 1200V) and bi-directional current measurement through a shunt. This function is useful, among others when monitoring the parameters of an energy storage system.

Universal input for measuring with any type of shunt with a wide voltage measurement range up to 1500 mV.
Automatic compensation of the voltage drop on the measuring shunt to support the correct measurements of voltage, power and energy in relation to the load.

ALARM FUNCTIONS

145.9
kW

AL1   AL2
AL3   AL4
1 or 4 relay outputs with signaling on the display in the form of an active alarm number.

Each of the alarms can be configured to work in one of 7 modes, incl. REG mode for alarm control via RS-485 Modbus.

Programmable maintenance of alarm signaling. After the alarm event has ceased, the alarm status marker blinks on the display until it is deleted by the user.

upper alarm threshold
lower alarm threshold

alarm activation delay

alarm deactivation delay

Alarm ON
Alarm OFF

t ≥ time delay --> Alarm activeted
For alarm operation both conditions (value and time delay) must be met

Individually programmable parameters of switching on and switching off the alarm; this feature can be used to prevent „false" alarms from occurring.

WALKING WINDOW ALGORITHM
Programmed averaging time according to the walking window algorithm with a given averaging time. This function is useful for measuring signals with high dynamics.

Possibility to measure the average, minimum or maximum value during the walking window.
