Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON 7070 LEDs are labeled using a 3-digit alphanumeric CAT code following the format below:

A B C D

Where:

- A** – designates luminous flux bin (example: S=1400 to 1450 lumens, T=1450 to 1500 lumens)
- B** – designates color bin (example: 1=6500K, 2=5700K, 3=5000K, 5=4000K, 6=3500K, 7=3000K, 8=2700K, A=2200K)
- C** – designates color space (example: 5=5-step MacAdam ellipse, 3=3-step MacAdam ellipse)
- D** – designates forward voltage bin (example: B=11.0-11.5V, C=11.5 to 12.0V)

Therefore, a LUXEON 7070 with a lumen range of 1400 to 1450, color bin of 3000K, Color space of 3-SDCM and forward voltage range of 11.5 to 12.0V has the following CAT code:

S 7 3 C

Luminous Flux Bins

Table 5 lists the standard luminous flux bins for LUXEON 7070 LEDs. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCTs.
