

LUXEON IR Domed for Automotive Gen 2

High power infrared emitters with engineered primary optics for high efficiency and beam control

The LUXEON IR Domed Gen 2 for Automotive is a family of high power infrared emitters tailored to application needs by offering a variety of products at multiple infrared wavelengths and optical radiation patterns. Through best-in-class thermal conductivity, LUXEON IR Domed Gen 2 has excellent performance at actual operating conditions. The LUXEON IR Domed Gen 2 uses an industry standard footprint for ease of integration and upgrading existing system designs.

All LUXEON IR Domed Gen 2 LEDs are AEC-Q102 qualified and are designed with innovative LUXEON technology to provide industry leading performance.

FEATURES AND BENEFITS

Available in 930 nm and 950 nm wavelengths to provide optimized performance for each type of application.

Radiant Power: 1400 mW (930 nm) for a greater system performance.

Six emission patterns to address diverse application needs, high punch, long range and high uniformity.

3.7 mm x 3.7 mm package with a 3 pad configuration that is compatible with the industry standard footprint to enable a direct upgrade in existing designs.

Ultra-low Rth of 1.6 °C/W, the industry's best thermal conductivity, solves thermal challenges and supports space saving designs.

PRIMARY APPLICATIONS

Driver Monitoring Systems

Biometric Identification

Exterior Sensing Applications

Interior Presence Detection

General Product Information

LUXEON IR Domed for Automotive Gen 2 LEDs are infrared emitters consisting of dual-junction high intensity near infrared chips mounted on a ceramic substrate. The products have primary optics designed to deliver a variety of radiation patterns. All LUXEON IR LEDs contain a TVS chip for ESD protection.

Figure 1. Schematic cross section LUXEON IR Domed Gen 2

Product Test Conditions

LUXEON IR Domed Gen 2 emitters are tested and binned with a 20 ms monopulse of 1A at a junction temperature, T_j , of 25 °C.

Part Number Nomenclature

Part numbers for LUXEON IR Domed Gen 2 follow the convention below:

L 1 I 0 – A B B B C C C 0 2 0 0 0 0

Where:

- B B B** – designates nominal peak wavelength
- C C C** – designates emitter’s radiation pattern design
- 0 2** – designates 2nd generation
- 0 0 0 0 – reserved for further customization

Therefore, the following part number is used for a LUXEON IR Domed Gen 2 emitter with a peak wavelength of 930 nm and a beam angle of ~90°:

L 1 I 0 – A 9 3 0 0 9 0 0 2 0 0 0 0

Radiometric Power Maintenance

Please contact your local Sales Representative or Lumileds Business Development Manager for more information about the long-term performance of this product.

Environmental Compliance

Lumileds LLC is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON IR Domed Gen 2 is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS Directive 2011/65/EU and REACH Regulation (EC) 1907/2006. Lumileds LLC will not intentionally add the following restricted materials to its products: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Performance Characteristics

Product Selection Guide

LUXEON IR Domed Gen 2 emitters are tested and binned with a 20 ms monopulse of 1A at a junction temperature, T_j , of 25 °C.

Notes for Table 5:

1. Proper current derating must be observed to maintain junction temperature below the maximum allowable temperature. LUXEON IR Domed for Automotive LEDs driven above maximum LED case temperature may have shorter lifetime.
2. Please consult with Lumileds for more information on maximum time durations and forward currents for these temperatures.
3. For pulse handling capability details see Figure 11.

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON IR Domed Gen 2 emitters are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

Where:

- A** – designates radiometric power bin (example: N = 1200 to 1300 mW)
- B C** – designates peak wavelength bin (example: 9H = 935 nm to 940 nm)
- D** – designates forward voltage bin (example: D = 2.5 to 3.0 V)

Therefore, a LUXEON IR Domed emitter with a radiometric power range of 1200 to 1300 mW, peak wavelength range of 935 to 940 nm and a forward voltage range of 2.5 to 3.0 V has the following CAT code:

N 9 H D

Radiometric Power Bins

Table 7 lists the standard radiometric power bins for LUXEON IR Domed Gen 2 emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all proliferations.

About Lumileds

Companies developing automotive, mobile, IoT and illumination lighting applications need a partner who can collaborate with them to push the boundaries of light. With over 100 years of inventions and industry firsts, Lumileds is a global lighting solutions company that helps customers around the world deliver differentiated solutions to gain and maintain a competitive edge. As the inventor of Xenon technology, a pioneer in halogen lighting and the leader in high performance LEDs, Lumileds builds innovation, quality and reliability into its technology, products and every customer engagement. Together with its customers, Lumileds is making the world better, safer, more beautiful—with light.
