Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux, intensity, radiometric power, color point, peak wavelength, dominant wavelength and forward voltage.

LUXEON 3528 RGB LEDs are labeled using a 12-digit alphanumeric CAT code following the format below:

A B C D – Red

E F G H – Green

J K L M – Blue

Where:

A E J – designates luminous flux for the red, green and blue LED (example: F=2.7 to 3 lm, P=7.0 to 8.0 lm)

BC FG KL – designates color, dominant wavelength bin (example: Red 10=619 to 625nm, Green 20=520 to 525nm, Blue 31=465 to 470nm)

D H M – designates forward voltage bin (example: A=1.9 to 2.5V, B=2.6 to 3.1V)

Therefore, a LUXEON 3528 RGB LED with a red luminous flux of 2.7 to 3 lm / color 619 to 625nm / forward voltage of 1.9 to 2.5V; green luminous flux of 7.0 to 8.0 lm / color 525 to 530nm / forward voltage of 2.6 to 3.1V; blue luminous flux of 1.9 to 2.3 lm / color 465 to 470nm and forward voltage of 2.7 to 3.3V has the following CAT Code:

F 1 0 A – Red

P 2 1 B – Green

B 3 1 C – Blue
