Product Bin and Labeling Definitions

Designing with LUXEON F

Flux bins supportable for car programs depend on product color and program start- and end-of-production date. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact local sales representative to request the flux bin range with best supportability for program timing.

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux or radiometric power, forward voltage, color point, peak wavelength, or dominant wavelength.

LUXEON F PC Amber and LUXEON F Plus PC Amber LEDs are labeled using a 3-digit alphanumeric CAT code following the format below:

A B C

- A** – designates luminous flux bin (example: D=70 to 80 lumens)
- B** – designates color code (example: A or B)
- C** – designates forward voltage bin (example: B=2.55V to 2.79V)

Therefore, a LUXEON F PC Amber with a lumen range of 70 to 80, color bin of A and a forward voltage of 2.55V to 2.79V has the following CAT code:

D A B

Luminous Flux Bins

Tables 5a and 5b list the standard photometric luminous flux bins for LUXEON F PC Amber and LUXEON F Plus PC Amber emitters. Product availability in a particular bin varies by color and platform start of production date. Contact local sales representative for best supportability of programs.
