Binary Chip Capacitors

91xRxK-x Series

Rev. V2

Features

- High Reliability Silicon Nitride/Oxide Dielectric
- Low Loss
- Long Term Reliability & Stability
- RoHS* Compliant

Description

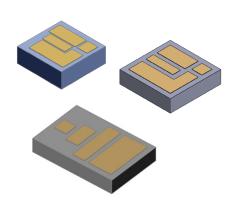

The 91xRxK-BOO and -BSP Series binary chip capacitors are designed to facilitate bread-boarding or to use where a trimming capability is required. These devices feature the same dielectric layer and bonding surfaces as our 9000 and 9100 Series chip capacitors. By connecting the pads in parallel, the capacitance values are additive, so many combinations are possible.

The BSP-1 chip offers the same capacitance values as BOO and BSP-3, but in a slightly larger chip with a more accommodating layout for ease of bonding.

The top contact and backside terminals are gold. Capacitors from this family of rugged devices are capable of reliable operation in all military, commercial and industrial applications.

These binary chip capacitors are capable of meeting the environmental requirements of MIL-STD-750 and MIL-STD-883.

Suitable for DC Block and RF bypass applications.

1. Packaging is available in waffle packs.

For example: 911R5K-BSP-3

"91" indicates working voltage is 100 V.

-BSP-3 is the DIE configuration

The part number for the 91 family of binary chip capacitors consists of 6 to 7 characters. The left most two characters identify the product family. Characters in between 91 and K indicate the nominal capacitance value of the capacitor, in pF. The rightmost character indicates the capacitance tolerance. Add the -package style

[&]quot;1R5" indicates the nominal capacitance value is 1.5 pF (the character "R" represents the radix point).

[&]quot;K" indicates the capacitance tolerance is +10% of the nominal value.

^{*} Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 0 devices.

Assembly Instructions

Die attach of the binary chip capacitors may be accomplished with eutectic solder, such as Au 80 / Sn 20, or conductive epoxy. Au wire or ribbon may be bonded to the top contact using thermo compression bonding or thermal sonic bonding. The wire or ribbon should be attached at or near the center of the top contact.
