

# SURMOUNT™ Low, Medium, & High Barrier Silicon Schottky Diodes: Anti-Parallel Pair

MA4E2508 Series  
Rev. V6

## Features

- Extremely Low Parasitic Capacitance & Inductance
- Surface Mountable in Microwave Circuits, No Wirebonds Required
- Rugged HMIC Construction with Polyimide Scratch Protection
- Reliable, Multilayer Metalization with a Diffusion Barrier, 100% Stabilization Bake (300°C, 16 hours)

## Applications

- Aerospace & Defense
- ISM

## Description

The MA4E2508 SURMOUNT™ Anti-Parallel Diode Series are Silicon Low, Medium, & High Barrier Schottky Devices fabricated with the patented Heterolithic Microwave Integrated Circuit (HMIC) process. HMIC circuits consist of Silicon pedestals which form diodes or via conductors embedded in a glass dielectric, which acts as the low dispersion, low loss, microstrip transmission medium. The combination of silicon and glass allows HMIC devices to have excellent loss and power dissipation characteristics in a low profile, reliable device.

The Surmount Schottky devices are excellent choices for circuits requiring the small parasitics of a beam lead device coupled with the superior mechanical performance of a chip. The SurMount structure employs very low resistance silicon vias to connect the Schottky contacts to the metalized mounting pads on the bottom surface of the chip. These devices are reliable, repeatable, and a lower cost performance solution to conventional devices. They have lower susceptibility to electrostatic discharge than conventional beam lead Schottky diodes.

The multi-layer metalization employed in the fabrication of the Surmount Schottky junctions includes a platinum diffusion barrier, which permits all devices to be subjected to a 16-hour non-operating stabilization bake at 300°C.

The “0502” outline allows for Surface Mount placement and multi- functional polarity orientations.

## Case Style 1112

Bond Pad Metal Thickness = 2 micron min. - 3 micron max.

## Case Style 1112

Dim.	INCHES		MILLIMETERS	
	Min.	Max.	Min.	Max.
A	0.0445	0.0465	1.130	1.180
B	0.0169	0.0189	0.430	0.480
C	0.0040	0.0080	0.102	0.203
D Sq.	0.0128	0.0148	0.325	0.375
E	0.0128	0.0148	0.325	0.375

## Equivalent Circuit

# SURMOUNT™ Low, Medium, & High Barrier Silicon Schottky Diodes: Anti-Parallel Pair

MA4E2508 Series

Rev. V6

Low Barrier = MA4E2508L, Medium Barrier = MA4E2508M, High Barrier = MA4E2508H

Electrical Specifications: Freq. DC - 18 GHz,  $T_A = +25^\circ\text{C}^{1,2}$

Model Number	Barrier	$V_F @ 1 \text{ mA}$ (mV)	$C_T @ 0 \text{ V}$ (pF)	$R_T$ Slope Resistance ( $V_{F1} - V_{F2}$ ) / (10.5 mA - 9.5 mA) ( $\Omega$ )
MA4E2508L	Low	330 max. 300 typ.	0.24 max. 0.18 typ.	16 typ. 20 max.
MA4E2508M	Medium	470 max. 420 typ.	0.24 max. 0.18 typ.	12 typ. 18 max.
MA4E2508H	High	700 max. 650 typ.	0.24 max. 0.18 typ.	11 typ. 15 max.

1.  $R_T$  is the dynamic slope resistance where  $R_T = R_S + R_J$ , where  $R_J = 26 / I_{DC}$  ( $I_{DC}$  is in mA) and  $R_S$  is the ohmic resistance.
2. Maximum forward voltage difference  $DV_f @ 1 \text{ mA}$ : 10 mV

## Spice Parameters (Per Diode)<sup>3</sup>

Barrier	$I_S$ (nA)	$R_S$ ( $\Omega$ )	N	$C_{J0}$ (pF)	M	$I_K$ (mA)	$C_J$ par (pF)	$V_J$ (V)	FC	BV (V)	IBV (mA)
Low	26	12.8	1.20	1.0 E-2	0.5	14	9.0 E-2	8.0 E-2	0.5	5.0	1.0 E-2
Medium	5.0 E-1	9.6	1.20	1.0 E-2	0.5	10	9.0 E-2	8.0 E-2	0.5	5.0	1.0 E-2
High	5.7 E-2	6.5	1.20	1.0 E-2	0.5	4	9.0 E-2	8.0 E-2	0.5	5.0	1.0 E-2

3. Spice parameters (Per Diode) are based on the MA4E2502 Series datasheet.

## Absolute Maximum Ratings @ +25°C

Parameter	Absolute Maximum
Forward Current	20 mA
Reverse Voltage	5 V
RF CW Incident Power	20 dBm
RF & DC Dissipated Power	50 mW
Junction Temperature	+175°C
Operating Temperature	-40°C to +125°C
Storage Temperature	-40°C to +150°C

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. MACOM does not recommend sustained operation near these survivability limits.

## Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 0 devices.

**MA4E2508 Schematic Per Diode**

**Schematic Values per Diode**

Model Number	$R_s$ ( $\Omega$ )	$L_s$ (nH)	$R_j$ ( $\Omega$ )	$C_T$ (pF)
MA4E2508L	12.8	0.8	26 / I <sub>dc</sub> (mA)	0.09
MA4E2508M	9.6			
MA4E2508H	6.5			

**Ordering Information**

Part Number	Packaging
MA4E2508L-1112	100 die in carrier
MA4E2508M-1112	
MA4E2508H-1112	
MADS-002508-1112LP	3000 piece reel
MADS-002508-1112MP	
MADS-002508-1112HP	

**Circuit Mounting Dimensions (Inches)**

**Applications**

The MA4E2508 family of surmount Schottky diodes are recommended for use in microwave circuits through Ku band frequencies for lower power applications such as mixers, sub-harmonic mixers, detectors and limiters. The HMIC construction facilitates the direct replacement of more fragile beam lead diodes with the corresponding surmount diode, which can be connected to a hard or soft substrate circuit with solder.

**Handling**

All semiconductor chips should be handled with care to avoid damage or contamination from perspiration and skin oils. The use of plastic tipped tweezers or vacuum pickups is strongly recommended for individual components. The top surface of the die has a protective polyimide coating to minimize the damage.

The rugged construction of these surmount devices allows the use of standard handling and die attach techniques. It is important to note that industry standard electrostatic discharge (ESD) control is required at all times, due to the sensitive nature of Schottky junctions. Bulk handling should insure that abrasion and mechanical shock are minimized.

**Die Bonding**

Die attach for these devices is made simple through the use of surface mount die attach technology. Mounting pads are conveniently located on the bottom surface of these devices, and are opposite the active junction. The devices are well suited for higher temperature solder attachment onto hard substrates.

For hard substrates, we recommend utilizing a vacuum tip and force of 60 to 100 grams applied uniformly to the top surface of the device, using a hot gas bonder with equal heat applied across the bottom mounting pads of the device. When soldering to soft substrates, it is recommended to use a lead-tin interface at the circuit board mounting pads. Position the die so that its mounting pads are aligned with the circuit board mounting pads. Reflow the solder paste by applying equal heat to the circuit at both die-mounting pads. The solder joint must not be made one at a time, creating un-equal heat flow and thermal stress. Solder reflow should not be performed by causing heat to flow through the top surface of the die. Since the HMIC glass is transparent, the edges of the mounting pads can be visually inspected through the die after die attach is completed.
