## Description

The MADP-011029 is a lead-free $1.5 \times 1.2 \mathrm{~mm}$ TDFN surface mount plastic package that provides both low and high signal frequency operation from 50 MHz to 12 GHz . The higher breakdown voltage and lower thermal resistance of the PIN diode provides peak power handling in excess of 100 W .

This device is ideally suitable for usage in higher incident power switches, phase shifters, attenuators, and limiter microwave circuits over a broad frequency where higher performance surface mount diode assemblies are required.

## Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

These devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1B devices.
9. Exceeding any one or combination of these limits may cause permanent damage to this device.
10. MACOM does not recommend sustained operation near these survivability limits.

## Assembly Recommendations

Devices may be soldered using standard $\mathrm{Pb} 60 / \mathrm{Sn} 40$, or RoHS compliant solders. Leads are plated NiPdAuAg to ensure an optimum solderable connection.

For recommended $\mathrm{Sn} / \mathrm{Pb}$ and RoHS soldering profile See Application Note M538 on the MACOM website.

## Cleanliness and Storage

These devices should be handled and stored in a clean environment. Ends of the device are NiPdAuAg plated for greater solderability. Exposure to high humidity ( $>80 \%$ ) for extended periods may cause the surface to oxidize. Caution should be taken when storing devices for long periods.

## General Handling

Device can be handled with tweezers or vacuum pickups and are suitable for use with automatic pick-and-place equipment.
