## ΜΛΟΜ

#### Integrated Switch and LNA Module 1 - 6 GHz

#### Features

- High Power SPDT Switch and 2-Stage LNA
- Broadband: 1 6 GHz
- No External Matching Components Required
- RX Mode Gain:
  - 35.0 dB @ 2.50 GHz 34.5 dB @ 3.75 GHz 33.5 dB @ 4.50 GHz
- RX Mode Noise Figure: 1.2 dB @ 2.50 GHz 1.3 dB @ 3.75 GHz 1.5 dB @ 4.50 CHz
  - 1.5 dB @ 4.50 GHz TX Mode at 2.3 - 5.0 GHz:
    - Insertion Loss: 0.4 dB P0.1dB: 40.5 dBm
- Single 5 V Bias
- Low DC Current: 78 mA in RX Mode
- Integrated Control Circuitry with 1.8 V Logic
- Lead-Free 6 mm 20 Lead QFN Package
- HBM ESD Class 1C
- RoHS\* Compliant

#### Description

The MAMF-011119 is a compact surface mount, highly integrated high power SPDT switch and 2-stage low noise amplifier (LNA) module. It includes an antenna switch and a LNA in a compact 6 mm QFN package. All the bias circuitry and matching components are internal to the module.

This module operates from 1 - 6 GHz and features high power handling, low noise figure, high linearity and low power consumption. The module requires a single 5 V supply and the T/R switch is 1.8 V CMOS compatible.

The MAMF-011119 is ideally suited for 5G Massive MIMO, Small Cell BTS, or other TDD-based communication systems.

#### **Functional Schematic**

## Pin Configuration<sup>3</sup>

| Pin #                              | Pin Name            | Description           |
|------------------------------------|---------------------|-----------------------|
| 1, 3-5, 7, 9-13,<br>15, 16, 18, 20 | GND                 | Ground                |
| 2                                  | ANT                 | RF Antenna Port       |
| 6                                  | N/C                 | Internally No Connect |
| 8                                  | V <sub>DD</sub>     | Supply Voltage        |
| 14                                 | RXOUT               | RX Output Port        |
| 17                                 | T/R                 | Logic Signaling Pin   |
| 19                                 | TERM                | Termination Port      |
| 21                                 | Paddle <sup>4</sup> | Ground                |

3. MACOM recommends connecting GND and No Connection (N/C) pins to ground.

4. The exposed paddle centered on the package bottom must be connected to RF, DC & thermal ground.

### **Ordering Information**<sup>1,2</sup>

| Part #             | Package         |
|--------------------|-----------------|
| MAMF-011119-TR1000 | 1000 piece reel |
| MAMF-011119-TR3000 | 3000 piece reel |
| MAMF-011119-001SMB | Sample Board    |

Reference Application Note M513 for reel size information.
All sample boards include 5 loose parts.

\* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

#### Absolute Maximum Ratings<sup>5,6</sup>

| Parameter   | Absolute Maximum   |
|---|--|
| Antenna Input Power <sup>7</sup> Freq. = 2.5 GHz:<br>RX Mode<br>TX Mode                             | 17 dBm LTE (8 dB PAR), 20 dBm CW<br>39 dBm LTE (8 dB PAR), 42 dBm CW |
| DC Voltages:<br>V <sub>DD</sub> , ANT & TERM<br>T/R & RXOUT   | -0.5 to +5.5 V<br>-0.5 to +2.75 V                                    |
| Junction Temperature:<br>RX Mode <sup>8,10</sup><br>TX Mode <sup>8,10</sup><br>TX Mode <sup>7</sup> | +150°C<br>+125°C<br>+140°C   |
| Operating Temperature <sup>9</sup>  | -40°C to +105°C  |
| Storage Temperature   | -55°C to +150°C  |

5. Exceeding any one or combination of these limits may cause permanent damage to this device.

6. MACOM does not recommend sustained operation near these survivability limits.

7. Single event, up to 10 seconds duration.

8. Operating at nominal conditions with  $T_J \le +150^{\circ}C$  (RX Mode) and  $T_J \le +125^{\circ}C$  (TX Mode) will ensure MTTF >> 1 x 10<sup>6</sup> hours.

9. Operating/Case temperature (T<sub>c</sub>) is the temperature of the exposed paddle.

10. Junction Temperature (T<sub>J</sub>) = T<sub>C</sub> +  $\Theta_{JC}$  \* P<sub>DISS</sub> where P<sub>DISS</sub> is the total DC & RF dissipated power.

- RX Mode: Typical thermal resistance ( $\Theta_{JC}$ ) = 33.4°C/W.
- TX Mode: Typical thermal resistance ( $\Theta_{JC}$ ) = 9.8°C/W.

#### **Handling Procedures**

Please observe the following precautions to avoid damage:

#### Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

| Parameter      | Rating     | Standard      |
|----------------|------------|---------------|
| Human Body     | 1000 V     | ESDA/JEDEC JS |
| Model (HBM)    | (Class 1C) | -001          |
| Charged Device | 1000 V     | ESDA/JEDEC JS |
| Model (CDM)    | (Class C3) | -002          |

#### **Power Supplies**

De-coupling capacitors should be placed at the V<sub>DD</sub> supply pin to minimize noise and fast transients. Supply voltage change or transients should have a slew rate smaller than 1 V / 10  $\mu$ s. In addition, all control pins should remain at 0 V (+/- 0.3 V) and no RF power should be applied while the supply voltage ramps or while it returns to zero.
