STANDARD MANUAL							

4. Characteristics

Standard atmospheric conditions

Unless otherwise specified, the standard range of atmospheric conditions for making measurements and tests is as follows:

Ambient temperature: 15°C to 35°CRelative humidity: 45% to75%Air Pressure: 86kPa to 106kPa

If there is any doubt about the results, measurement shall be made within the following conditions:Ambient temperature: $20^{\circ}C \pm 2^{\circ}C$ Relative humidity: 60% to 70%Air Pressure: 86kPa to 106kPa

Operating temperature range

The ambient temperature range at which the capacitor can be operated continuously at rated voltage is -55°C to 105°C.

7.Application Guideline:

X-CON Solid Aluminum Electrolytic Capacitor should be used compliance with the following guidelines

- 7-1Circuit design
 - Prohibited Circuits for use

Do not use the capacitors with the following circuits.

- 1) Time constant circuits
- 2) Coupling circuits
- 3) Circuits which are greatly affected by leakage current
- 4) High impedance voltage retention circuits.
- 7-2. Voltage

1) Over voltage

The application of over-voltage and reverse voltage below can cause increases in leakage current and short circuits. Applied voltage, refers to the voltage value including the peak value of the transitional instantaneous voltage and the peak Value of ripple voltage, not just steady line voltage. Design your circuit so that the peak voltage does not exceed the stipulated voltage.

Over voltage exceeding the rated voltage may not be applied even for an instant as it may cause a short circuit.

2) Applied voltage

① Sum of the DC voltage value and the ripple voltage peak values must not exceed the rated voltage.

② When DC voltage is low, negative ripple voltage peak value must not become a reverse voltage that exceeds 10% of The rated voltage.

③ Use the X-CON within 20% of the rated voltage for applications which may cause the reverse voltage during the Transient phenomena when the power is tunid off or the source is switched.

7-3 Sudden charge and discharge restricted

Sudden charge and discharge may result in short circuit's large leakage current. Therefore, a protection circuits are recommended to design in when on of the following condition is expected.

1) The rush current exceeds 10A

2) The rush current exceeds 10 times of allowable ripple current of X-CON.

A protection resistor $(1K \Omega)$ must be inserted to the circuit during the charge and discharge when measuring the leakage Current.

7-4 Ripple current

Use the capacitors within the stipulated permitted ripple current. When excessive ripple current is applied to the capacitor, It causes increases in leakage current and short circuits due to self- heating. Even when using the capacitor under the Permissible ripple current, reverse voltage may occur if the DC bias voltage is low.

7-5 Leakage current

There is a risk of leakage current characteristics increasing even if the following use environments are within the stipulated range However, even if leakage current increases once, it has the characteristic that leakage current becomes small in most cases after voltage is applied due to its self-correction mechanism.

7-6 Failure rate

The main failure mode of X-CON is open mode primarily caused by electrostatic capacity drop at high temperature (i.e.wear out failure), besides random short circuit mode failures primarily caused by over voltage occurs as minor one. The time it takes to reach the failures mode can be extended by using the X-CON with reduced ambient temperature, ripple current and applied voltage.

7-7 Capacitor insulation

1) Insulation in the marking sleeve is not guaranteed. Be aware that the space between the case and the negative electrode Terminal is not insulated and has some resistance.

2) Be sure to completely separate the case, negative lead terminal, and positive lead terminal and PCB patterns with each other.

Issued-date: 2018-05-22	Name	Specification Sheet – ULR				
Version	01		Page	14		
STANDARD MANUAL						

7-8 Precautions for using capacitors

X-CON capacitors should not be used in the following environments.

1) Environments where the capacitor is subject to direct contact with salt water or oil can directly fall on it.

2) Environments where capacitors are exposed to direct sunlight.

3) High temperature (Avoid locating heat generating components around the X-CON and on the underside of the

PCB), or humid environments where condensation can form on the surface of the capacitor.

4) Environments where the capacitor is in contact with chemically active gases.

5) Acid or alkaline environments.

6) Environment subject to high-frequency induction.

7) Environment subject to excessive vibration and shock.

8. Mounting Precautions

Mounting phase	Things to note before mounting	Disposal
	1) Used X-CON capacitors	Not reused
	2) LC-increased X-CON capacitors	Apply them with rated voltage in series with $1 \text{K} \Omega$
	after long storage	resistance for 1 hour at the range between 60 and $70^\circ C$
Before mounting	3) X-CON capacitors dropped to the	Not reused
	floor	
	4) Precautions on polar, capacitance	Products without remarkable polar, capacitance and rated
	and rated voltage	voltage shouldn't be available
	5) Precautions on the pitch between	The products can be used only when said pitch is matched
	lead terminal and PCB	
	6) Precautions on the stress that lead	The products can be used for production only when lead
	terminal and body of X-CON	terminal and body are not subject stress.
	capacitors enduring in mounting	
	1) Soldering with a soldering iron	Both temperature and duration in mounting should meet
		the requirements of out-going SPEC; no stress should be
		allowed to occur in mounting; Don't let the tip of the soldering iron touch the X-CON itself.
Mounting	2) Flow soldering	X-CON capacitor body should be prohibited to submerge
in to unit ing		in melted solder; both temperature and duration in
		mounting should meet the requirements of out-going
		SPEC; The rosin is not allowed to adhere to any where
		other than lead terminal.
	1) Precautions on mounting status	Do not tilt, bend twists X-CON; Do not allow other matter
		touch X-CON.
	2) Washing the PCB (available	Used immersion or ultrasonic waves to clean for a total of
	cleaning agent 1)high quality	less than 5 minutes and the temperature be less than 60° C;
After mounting	alcohol-based cleaning fluid such as	The conductivity, PH, specific gravity and water cleaning,
	st-100s, 750L,750M;2) Detergents	X-CON products should be dried with hot air (less than
	including substitute freon such as	the maximum operating temperature).
	AK-225AES and IPA)
