## 1 Introduction

Figure 1: GLK12232-25 Display

The GLK12232-25 is an intelligent graphic liquid crystal display engineered to quickly and easily add an elegant creativity to any application. In addition to the RS232, TTL and I2C protocols available in the standard model, a USB communication model allows the GLK12232-25 to be connected to a wide variety of host controllers. Communication speeds of up to 115.2 kbps for serial protocols and 100 kbps for $I^{2} C$ ensure lightning fast text and graphic display.

The simple command structure permits easy software control of many settings including backlight brightness, screen contrast, and baud rate. On board memory provides 16KB of customizable fonts and bitmaps to enhance the graphical user experience.

User input on the GLK12232-25 is available through a five by five matrix style keypad. Two general purpose outputs provide simple switchable five volt sources on each model.

The versatile GLK12232-25, with all the features mentioned above, is available in a variety of colour and temperature options to suit almost any application.

## 2 Quick Connect Guide

### 2.1 Available Headers

Figure 2: GLK12232-25 Standard Module Header Locations

Figure 3: GLK12232-25 USB Model Header Locations
Table 1: List of Available Headers

| $\#$ | Header | Mate | Population |
| :---: | :---: | :---: | :---: |
| 1 | Communication/Power Connector | ESCCPC5V/BBC | Standard Model Only |
| 2 | Keypad | KPP4x4 | USB Model Only |
| 3 | GPO Header | None Offered | All Models |
| 4 | Mini USB Connector | EXTMUSB3FT/INTMUSB3FT | All Models |

### 2.2 Standard Module

The standard version of the GLK12232-25 allows for user configuration of two common communication protocols. First, the unit can communicate using serial protocol at either RS323 or TTL voltage levels. Second, it can communicate using the Inter-Integrated Circuit connect, or $I^{2} C$ protocol. Connections for each protocol can be accessed through the four pin Communication/Power Header as outlined in the Serial Connections and $I^{2} C$ Connections sections below.

Recommended Parts

Figure 4: Extended Communication/Power Cable (ESCCPC5V)

Figure 5: Breadboard Cable (BBC)

The most common cable choice for any standard Matrix Orbital display, the Extended Communication/ Power Cable offers a simple connection to the unit with familiar interfaces. DB9 and floppy power headers provide all necessary input to drive your display.

For a more flexible interface to the GLK12232-25 , a Breadboard Cable may be used. This provides a simple four wire connection that is popular among developers for its ease of use in a breadboard environment.

## Serial Connections

Serial protocol provides a classic connection to the GLK12232-25. The Communication/Power Cable is most commonly used for this set up as it provides connections for DB9 serial and floppy power cables. To place your board in Serial mode, adhere to the steps laid out below.

1. Set the Protocol Select jumpers.

- RS232: Connect the five jumpers* in the 232 protocol box with the zero ohm jumper resistors provided or an alternate wire or solder solution.
- TTL: Connect the four jumpers* in the TTL protocol box.
*Note: Jumpers must be removed from all protocol boxes save for the one in use.

2. Make the connections.
a. Connect the six pin female header of the Communication/Power Cable to the Communication/Power Header of your GLK12232-25.
b. Insert the male end of your serial cable to the corresponding DB9 header of the Communication/Power Cable and the mate the female connector with the desired communication port of your computer.
c. Select an unmodified floppy cable from a PC power supply and connect it to the power header of the Communication/Power Cable.
3. Create.

- MOGD\# or a terminal program will serve to get you started, and then you can move on with your own development. Instructions for the former can be found below and a variety of application notes are available for the latter at www.matrixorbital.ca/appnotes.

## $1^{2} \mathrm{C}$ Connections

A more advanced connection to the GLK12232-25 is provided by the $I^{2} C$ protocol setting. This is best accomplished using a breadboard and the Breadboard Cable. Power must be supplied from your breadboard or another external source. To dive right into your application and use the GLK12232-25 in $\mathrm{I}^{2} \mathrm{C}$ mode, get started with the guidelines below.

1. Set the Protocol Select switches.

- $\quad I^{2} \mathrm{C}$ : Ensure that the two $I^{2} \mathrm{C}$ jumpers in the corresponding protocol box are connected while all others are open.

2. Make the connections.
a. Connect the Breadboard Cable to the Communication/Power Header on your GLK12232-25 and plug the four leads into your breadboard. The red lead will require power, while the black should be connected to ground, and the green and yellow should be connected to your controller clock and data lines respectively.
b. Pull up the clock and data lines to five volts using a resistance between one and ten kilohms on your breadboard.
3. Create.

- This time you're on your own. While there are many examples within the Matrix Orbital AppNote section, www.matrixorbital.ca/appnotes, too many controllers and languages exist to cover them all. If you get stuck in development, it is possible to switch over to another protocol on the standard board, and fellow developers are always on our forums for additional support.

### 2.3 USB Module

The GLK12232-25-USB offers a single USB protocol for easy connection to a host computer. The simple and widely available protocol can be accessed using the on board mini B style USB connector as outlined in the USB Connections section.

## Recommended Parts

The External Mini USB cable is recommended for the GLK12232-25-USB display. It will connect to the miniB style header on the unit and provide a connection to a regular A style USB connector, commonly found on a PC.

Figure 6: Mini USB Cable (EXTMUSB3FT)

## USB Connections

The USB connection is the quickest, easiest solution for PC development. After driver installation, the GLK12232-25-USB will be accessible through a virtual serial port, providing the same result as a serial setup without the cable hassle. To connect to your GLK12232-25-USB please follow the steps below.

1. Set the Protocol Select jumpers.

- USB: The GLK12232-25-USB offers USB protocol only. Model specific hardware prevents this unit from operating in any other protocol, and does not allow other models to operate in USB. Protocol Select jumpers on the USB model cannot be moved.

2. Make the connections.

- Plug the mini-B header of your External Mini USB cable into your GLK12232-25-USB and the regular USB header into your computer USB jack.

3. Install the drivers.
a. Download the latest drivers at www.matrixorbital.ca/drivers, and save them to a known location.
b. When prompted, install the USB bus controller driver automatically
c. If asked, continue anyway, even though the driver is not signed
d. When the driver install is complete, your display will turn on, but communication will not yet be possible.
e. At the second driver prompt, install the serial port driver automatically
f. Again, if asked, continue anyway
4. Create.

- Use MOGD\# or a terminal program to get started, and then move on with your own development. Instructions for the former can be found below and a number of application notes are available for the latter at www.matrixorbital.ca/appnotes.

## 3 Software

The multiple communication protocols available and simple command structure of the GLK12232-25 means that a variety of applications can be used to communicate with the display. Text is sent to the display as a character string, for example, sending the decimal value 41 will result in an ' A ' appearing on the screen. A single control character is also available. Commands are merely values prefixed with a special command byte, 254 in decimal.

Table 2: Reserved Control Characters

## Control Characters

7 Bell / Sound Buzzer 10 Line feed / New line

Once the correct communication port is identified, the following communication settings can be applied to communicate correctly with the GLK12232-25 .

Table 3: Communication Settings

| BPS | Data Bits | Parity | Stop Bits | Flow Control |
| :---: | :---: | :---: | :---: | :---: |
| 19200 | 8 | None | 1 | None |

Finally, with a communication port identified and correctly setup simple text strings or even command bytes can easily be transmitted to control your display.

### 3.1 MOGD\#

The Matrix Orbital Graphic Display interface, MOGD\#, is offered as a free download from www.matrixorbital.ca/software/software graphic. It provides a simple graphical interface that allows settings, fonts, and bitmaps to be easily customised for any application.

While monochromatic bitmaps can easily be created in virtually any image editing program, MOGD\# provides an extensive font generation suite to stylize your display to any project design. In addition to standard font wide modifications, character ranges can be specified by start and end values to eliminate unused symbols, and individual glyphs can be modified with a double click. Finally, text spacing can be tailored and a complete font library built with your Matrix Orbital graphic display.

Like uProject, MOGD\# offers a scripting capability that provides the ability to stack, run, and save a series of commands. The most basic function is the Send Numeric tool which is used to transmit a string of values to the display to write text or execute a command.

Figure 7: MOGD\# Command Example
Again, the clear screen command is sent to a connected display, this time using the MOGD\# Send Numeric function command style. Scripts can be run as a whole using the Play button from the toolbar or as single commands by selecting Step; once executed it must be Reset. Before issuing commands, it is a good idea to ensure communication with a display is successful using the autodetect button.

This program provides both a staging areas for your graphics display and a proving ground that will prepare it for any application environment.

### 3.2 Application Notes

Full demonstration programs and code are available for Matrix Orbital displays in the C\# language from Simple C\# AppNote Pack in the Application Note section at www.matrixorbital.ca/appnotes. Difficulty increases from beginner, with the Hello World program, to advanced with the Dallas One-Wire temperature reading application.

Many additional applications are available in a number of different programming languages. These programs are meant to showcase the capability of the display and are not intended to be integrated into a final design. For additional information regarding code, please read the On Code document also found on the support site.

## 4 Hardware

### 4.1 Standard Model

$I^{2} \mathrm{C}$ Communication/Power Header

Figure 8: I2C Communication/Power Header

Table 4: $I^{2}$ C Communication/Power Pinout

| Pin | Function |
| :---: | :---: |
| 1 | Vcc |
| 2 | $R x(S C L)$ |
| 3 | $T x(S D A)$ |
| 4 | Gnd |

Voltage is applied through pins one and four of the header, please reference the electrical specifications before applying power. Pins two and three are reserved for $I^{2} C$ clock and data signals respectively, both of which should be pulled up to five volts using a resistance between one and ten kilohms. The Tyco 640456-4-LF style header used can be mated to a number of connectors, including Molex 22-01-3047.

### 4.2 USB Model

## Mini USB Connector

Figure 9: Mini USB Connector

Table 5: Mini USB Pinout

| Pin | Function |
| :---: | :---: |
| 1 | Vcc |
| 2 | D- |
| 3 | D+ |
| 5 | Gnd |

The GLK12232-25-USB -USB comes with a familiar Mini USB Connector to fulfill both communication and power needs. The standard MiniB style header can be connected to any other USB style using the appropriate cable. Most commonly used with a PC, this connection creates a virtual com port that offers a simple power solution with a familiar communication scheme.

## Alternate USB Header

Some advanced applications may prefer the straight four pin connection offered through the Optional Alternate USB Header. This header offers power and communication access in a simple interface package. The Optional Alternate USB Header may be added to the GLK12232-25-USB for an added charge as part of a custom order. Please use the Contact section to request more information from the friendly Matrix Orbital sales team.

### 4.3 Common Features

## General Purpose Outputs

Table 6: GPO Pinout

| Pin | Function |
| :---: | :---: |
| 1 | GPO 1 |
| 2 | GND |
| 3 | GPO 2 |
| 4 | GND |

A unique feature of the GLK12232-25 is the ability to control relays* and other external devices using either one of two General Purpose Outputs. Each can source up to 20 mA of current at five volts when on or sink 20 mA at zero volts when off. The straight, four pin header can be interfaced to a number of female connectors to provide control to any peripheral devices required.
*Note: If connecting a relay, be sure that it is fully clamped using a diode and capacitor in order to absorb any electro-motive force (EMF) which will be generated.

## Keypad Header

Table 7: Keypad Pinout

| Pin | Function | Pin | Function |
| :---: | :---: | :---: | :---: |
| 1 | Gnd | 7 | Column 1 |
| 2 | Row 1 | 8 | Column 2 |
| 3 | Row 2 | 9 | Column 3 |
| 4 | Row 3 | 10 | Column 4 |
| 5 | Row 4 | 11 | Column 5 |
| 6 | Row 5 | 12 | Gnd/Vcc* |

To facilitate user input, the GLK12232-25 provides a Keypad Interface Connector which allows a matrix style keypad of up to twenty-five keys to be directly connected to the display module. Key presses are generated when a short is detected between a row and a column. When a key press is generated, a character specific to that key press is automatically sent on the Tx communication line. If a synchronous read method is desired in serial mode*, the "Auto Transmit Keypress" function can be turned off to allow the key presses to remain in the buffer so that they may be polled. The character that is associated with each key press may also be altered using the "Assign Key Codes" command. The straight twelve pin header of the Keypad Interface Connector will interface to a variety of different devices including the Matrix Orbital KPP4×4 keypad.
*Note: In $I^{2}$ C mode, the "Auto Transmit Keypress" function should always be on, keypresses should not be polled.
**Note: The Ground / +5V pin is toggled by the jumper above the right of the keypad connector. Jump pads $1 \& 2$ for GND or $2 \& 3$ for +5 V .

## Protocol Select Jumpers

Figure 12: Protocol select Jumpers
The Protocol Select Jumpers provide the means necessary to toggle the GLK12232-25 between RS-232, TTL and $I^{2} \mathrm{C}$ protocols. As a default, the jumpers are set to RS-232 mode with solder jumps on the RS232 jumpers. In order to place the display module in $I^{2} \mathrm{C}$ mode you must first remove the solder jumps from the RS232 jumpers and then place them on the $I^{2} C$ jumpers. The display will now be in $I^{2} \mathrm{C}$ mode and have a default slave address of 80 , unless changed with the appropriate command. Similarly, in order to change the display to TTL mode, simply remove the zero ohm resistors from the RS232 or I ${ }^{2} \mathrm{C}$ jumpers and solder them to the TTL jumpers. Protocol resistors should be set to TTL for USB, and cannot be moved.

## Hardware Lock

Figure 13: FileSystem Lock Jumper
The Hardware Lock allows fonts, bitmaps, and settings to be saved, unaltered by any commands. By connecting the two pads near the memory chip with a zero ohm resistor, the display will be locked. This supersedes the data lock command and cannot be circumvented by any software means. To unlock the display and make changes simply remove the jumper.

## 5 Troubleshooting

### 5.1 Power

In order for your Matrix Orbital display to function correctly, it must be supplied with the appropriate power. If the power LED near the top right corner of the board is not illuminated, power is not applied correctly. Try following the tips below.

- First, check the power cable which you are using for continuity. If you don't have an ohm meter, try using a different power cable, if this does not help try using a different power supply.
- If power is applied through the DB9 connector, ensure that the Power Through DB9 Jumper is connected.
- If changes have been made to the protocol select block, ensure all the appropriate protocol select jumpers are connected and all unused protocol jumpers are disconnected.
- The last step will be to check the interface connector in use on your display. If the power connections have become loose, or you are unable to resolve the issue, please Contact Matrix Orbital for more information.

### 5.2 Display

If your display is powered successfully, the Matrix Orbital logo, or user created screen should display on start up. If this is not the case, check out these tips.

- Ensure the contrast is not too high or too low. This can result in a darkened or blank screen respectively. See the Manual Override section to reset to default.
- Make sure that the start screen is not blank. It is possible to overwrite the Matrix Orbital logo start screen, if this happens the screen may be blank. Try writing to the display to ensure it is functional, after checking the contrast above.

### 5.3 Communication

When communication of either text or commands is interrupted, try the steps below.

- First, check the communication cable for continuity. If you don't have an ohm meter, try using a different communication cable. If you are using a PC try using a different Com/USB Port.
- Next, please ensure that the display module is set to communicate on the protocol that you are using, by checking the Protocol Select Jumpers.
- In serial and USB protocols, ensure that the host system and display module are both communicating on the same baud rate. The default rate for the display module is 19200 bps .
- Match Rx from your display to the transmitting pin from your host and the Tx pin to the receiving pin.
- If you are communicating to the display via $I^{2} C^{*}$ please ensure that the data is being sent to the correct address. The default slave address for the display module is 80 .
- In $I^{2} C$ mode, connect $R x$ to the clock line of your controller and $T x$ to the data output.
- Unlock the display. See the Set and Save Data Lock command for more info.
- Finally, you may reset the display to its default settings using the Manual Override procedure outlined below.
*Note: $I^{2} C$ communication will always require pull up resistors on SCL and SDA of one to ten kilohms.

### 5.4 Manual Override

Should the settings of your display become altered in a way that dramatically impacts usability, the default settings can be temporarily restored. To override the display, please follow the steps below.

1. Disconnect power from your display.
2. Place a jumper on the two manual override pins, for the GLK12232-25 model these are the middle two keypad pins.
3. Reconnect power to your unit, and wait for the start screen before removing the jumper. Please note the jumper will adversely affect performance if left in place during use.
4. Settings will be temporarily** overridden to the defaults listed in the Manual Override Settings table. At this point any important settings, such as contrast, backlight, or baud rate, should not only be set but saved so they remain when the override is removed.

| Parameter | Value |
| :---: | :---: |
| Backlight | 255 |
| Contrast | 128 |
| Baud Rate | 19200 |
| $I^{2}$ C Address | 80 |

Table 8: Manual Override Settings

[^0]
## 6 Commands

### 6.1 Communication

| 1.1 Change | Dec | 25457 | Speed | v5.8 |
| :---: | :---: | :---: | :---: | :---: |
| Baud Rate | Hex | FE 39 | Speed |  |
|  | ASCII | $\square 9$ | Speed |  |

Immediately changes the baud rate. Not available in I2C. Baud rate can be temporarily forced to 19200 by a manual override.
Speed Byte Valid settings shown below.

Table 9: Accepted Baud Rate Values

| Rate | 9600 | 14400 | 19200 | 28800 | 38400 | 57600 | 76800 | 115200 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Speed | 207 | 138 | 103 | 68 | 51 | 34 | 25 | 16 |

| 1.2 Change I2C | Dec | $\mathbf{2 5 4 5 1}$ | Address |
| :--- | :--- | ---: | :--- |
| Slave Address | Hex | FE $\mathbf{3 3}$ | Address |
|  | ASCII | $\mathbf{~} \mathbf{3}$ | Address |

Immediately changes the I2C write address. Only even values are permitted as the next odd address will become the read address. Default is 80 .
Address Byte Even value.

| 1.3 Set a Non-Standard | Dec | $\mathbf{2 5 4} \mathbf{1 6 4}$ | Speed | v5.0 |
| :--- | :--- | ---: | :--- | :--- |
| Baud Rate | Hex | FE A4 | Speed |  |
|  | ASCII | $■ \tilde{n}$ | Speed |  |

Immediately changes the baud rate to a non-standard value. Speed must be a whole number between 977 and 153800. Due to rounding, error increases with baud rate, actual baud must be within $3 \%$ of desired baud to ensure accurate communication. Not available in I2C. Can be temporarily forced to 19200 by a manual override.
Speed Short Calculations shown below, standard crystal speed is 16 MHz .

$$
\begin{gathered}
\text { Speed }=\frac{\text { CrystalSpeed }}{(8 \times \text { DesiredBaud })}-1 \quad \text { ActualBaud }=\frac{\text { CrystalSpeed }}{(8 \times(\text { Speed }+1))} \\
\text { Equation 1: Speed Byte Calculation } \quad \text { Equation 2: Actual Baud Rate Calculation } \\
\frac{\mid \text { DesiredBaud }- \text { ActualBaud } \mid}{\text { DesiredBaud }}<0.03
\end{gathered}
$$

Equation 3: Baud Rate Error Calculation

|  | 1.4 Turn Software | Dec | $\mathbf{2 5 4} \mathbf{5 8}$ | AlmostFull AlmostEmpty |
| :--- | :--- | ---: | :--- | :---: |
| Flow Control On | Hex | FE 3A | AlmostFull AlmostEmpty | v5.8 |
|  | ASCII | $■:$ | AlmostFull AlmostEmpty |  |

Enables simple flow control. The display will return a single, Xoff, byte to the host when the display buffer is almost full and a different, Xon, byte when the buffer is almost empty. Full value should provide enough room for the largest data packet to be received without buffer overflow. No data should be sent to the display between full and empty responses to permit processing. Buffer size is $256^{*}$ bytes. Not available in I2C. Default off.

| AlmostFull | Byte | Number of bytes remaining before buffer is completely full. Value between 0 and 128. |
| :--- | :--- | :--- |
| AlmostEmpty | Byte | Number of bytes before buffer can be considered empty enough to accept data | AlmostEmpty Byte Number of bytes before buffer can be considered empty enough to accept data.

| 1.5 Turn | Dec | $\mathbf{2 5 4 5 9}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Software Flow | Hex | FE 3B |  |
| Control Off | ASCII | $■$ |  |

Disables flow control. Bytes sent to the display may be permitted to overflow the buffer resulting in data loss.
6.2 Text

| 2.1 Clear | Dec | 25488 | v5.8 |
| :---: | :---: | :---: | :---: |
| Screen | Hex | FE 58 |  |
|  | ASCII | $\square \mathrm{X}$ |  |
| Clears the contents of the screen. |  |  |  |

| 2.2 Go | Dec | 25472 | v5.8 |
| :---: | :---: | :---: | :---: |
| Home | Hex | FE 48 |  |
|  | ASCII | $\square \mathrm{H}^{\text {d }}$ |  |
| Returns the cursor to the top left of the screen. |  |  |  |

| 2.3 Set Cursor | Dec | $\mathbf{2 5 4} \mathbf{7 1}$ | Column Row |
| :--- | :--- | ---: | :--- |
| Position | Hex | FE 47 | Column Row |
|  | ASCII | $\mathbf{G}$ | Column Row |

| Sets the cursor to a specific cursor position where the next transmitted character is printed. |
| :--- |
| Column |
| Byte |
| Row | Balue between 1 and number of character columns.

| 2.4 Set Cursor | Dec | $\mathbf{2 5 4 1 2 1}$ | X Y | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Coordinate | Hex | FE 79 | X Y |  |
|  | ASCII | ■ | X Y |  |

Sets the cursor to an exact pixel position where the next transmitted character is printed.
X Byte Value between 1 and screen width, represents leftmost character position.
Y Byte Value between 1 and screen height, represents topmost character position.

| 2.5 Auto Scroll | Dec | $\mathbf{2 5 4} \mathbf{8 1}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| On | Hex | FE 51 |  |
|  | ASCII | $■$ Q |  |

The entire contents of screen are shifted up one line when the end of the screen is reached. Display default is on.

| 2.6 Auto Scroll | Dec | $\mathbf{2 5 4} \mathbf{8 2}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Off | Hex | FE 52 |  |
|  | ASCII | $■ \mathbf{R}$ |  |

[^1]
### 6.3 Drawing

| 3.1 Set Drawing | Dec | $\mathbf{2 5 4} \mathbf{9 9}$ | Colour | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Colour | Hex | FE 63 | Colour |  |
|  | ASCII | ■ | Colour |  |

Set the colour to be used for all future drawing commands that do not implicitly specify colour.
Colour Byte 0 for background or any other value for text colour.

| 3.2 Draw | Dec | $\mathbf{2 5 4 1 1 2}$ | $X Y$ | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Pixel | Hex | FE 70 | X Y |  |
|  | ASCII | $\mathbf{p}$ | $X$ Y |  |

Draw a single pixel at the specified coordinate using the current drawing colour.
$X$ Byte Horizontal position of pixel to be drawn, zero indexed from left.
Y Byte Vertical position of pixel to be drawn, zero indexed from top.

| 3.4 Continue a | Dec | $\mathbf{2 5 4 1 0 1}$ | $X$ Y |
| :--- | :--- | ---: | :--- |
| Line | Hex | FE $\mathbf{6 5}$ | X Y |
|  | ASCII | e Y | v5.8 |
|  |  |  |  |

Draw a line from the last point drawn to the coordinate specified using the current drawing colour.
$X \quad$ Byte Left coordinate of the terminus, zero indexed from left.
Y Byte Top coordinate of the terminus, zero indexed from top.

| 3.5 Draw a <br> Rectangle |  | Dec | 254114 | Colour X1 Y1 X2 Y2 | v5.8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Hex | FE 72 | Colour X1 Y1 X2 Y2 |  |
|  |  | ASCII |  | Colour X1 Y1 X2 Y2 |  |
| Draw a rectangular frame one pixel wide using the colour specified; current drawing colour is ignored. |  |  |  |  |  |
| Colour | Byte | 0 for background or any other value for text colour. |  |  |  |
| X1 | Byte | Leftmost coordinate of the rectangle, zero indexed from left. |  |  |  |
| Y1 | Byte | Topmost coordinate of the rectangle, zero indexed from top. |  |  |  |
| X 2 | Byte | Rightmost coordinate of the rectangle, zero indexed from left. |  |  |  |
| Y2 | Byte | Bottommost coordinate of the rectangle, zero indexed from top. |  |  |  |

| 3.6 Draw a Filled | Dec | $\mathbf{2 5 4} \mathbf{1 2 0}$ | Colour X1 Y1 X2 Y2 | $\mathbf{v 5 . 8}$ |
| :--- | :--- | ---: | :--- | :--- |
| Rectangle | Hex | FE 78 | Colour X1 Y1 X2 Y2 |  |
|  | ASCII | $\mathbf{n x}$ | Colour X1 Y1 X2 Y2 |  |

Draw a filled rectangle using the colour specified; current drawing colour is ignored.

| Colour | Byte | O for background or any other value for text colour. |
| :--- | :--- | :--- |
| X 1 | Byte | Leftmost coordinate of the filled rectangle, zero indexed from left. |
| Y 1 | Byte | Topmost coordinate of the filled rectangle, zero indexed from top. |
| X 2 | Byte | Rightmost coordinate of the filled rectangle, zero indexed from left. |
| Y 2 | Byte | Bottommost coordinate of the filled rectangle, zero indexed from top. |

| 3.7 Initialize a | Dec | $\mathbf{2 5 4} \mathbf{1 0 3}$ | ID Type X1 Y1 X2 Y2 | V5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Bar Graph | Hex | FE 67 | ID Type X1 Y1 X2 Y2 |  |
|  | ASCII | $\mathbf{■ g}$ | ID Type X1 Y1 X2 Y2 |  |

Initialize a bar graph in memory for later implementation. Graphs can be located anywhere on the screen, but overlapping may cause distortion. Graph should be filled using the Draw a Bar Graph command.

| ID | Byte | Unique bar identification number, between 0 and 255. |
| :--- | :--- | :--- |
| Type | Byte | Graph style, see Bar Graph Types. |
| X 1 | Byte | Leftmost coordinate of the bar, zero indexed from left. |
| Y1 | Byte | Topmost coordinate of the bar, zero indexed from top. |
| X 2 | Byte | Rightmost coordinate of the bar, zero indexed from left. |
| Y2 | Byte | Bottommost coordinate of the bar, zero indexed from top. |

Table 10: Bar Graph Types

|  | Direction | Base |
| :--- | :--- | :--- |
| $\mathbf{0}$ | Vertical | Bottom |
| $\mathbf{1}$ | Horizontal | Left |
| $\mathbf{2}$ | Vertical | Top |
| $\mathbf{3}$ | Horizontal | Right |

| 3.8 Draw a | Dec | $\mathbf{2 5 4} \mathbf{1 0 5}$ | ID Value |
| :--- | :--- | ---: | :--- |
| Bar Graph | Hex | FE 69 | ID Value |
|  | ASCII | $■ i$ | ID Value |

Fill in a portion of a bar graph after initialization. Any old value will be overwritten by the new. Setting a value of zero before setting a new value will restore a graph should it become corrupted.
ID $\quad$ Byte $\quad$ Unique bar identification number, value between 0 and 255.
Value Byte Portion of graph to fill in pixels, will not exceed display bounds.

| 3.9 Initialize a | Dec | $\mathbf{2 5 4} \mathbf{1 1 0}$ | ID X1 Y1 X2 Y2 | V5.8 |
| :--- | :--- | ---: | :--- | ---: | :--- |
| Strip Chart | Hex | FE 6E | ID X1 Y1 X2 Y2 |  |
|  | ASCII | ■n | ID X1 Y1 X2 Y2 |  |

Designate a portion of the screen for a chart. Visual changes will occur when the update command is issued.

| ID | Byte | Unique chart identification number, value between 0 and 7. |
| :--- | :--- | :--- |
| X1 | Byte | Leftmost coordinate of the strip chart, zero indexed from left. |
| Y1 | Byte | Topmost coordinate of the strip chart, zero indexed from top. |
| X2 | Byte | Rightmost coordinate of the strip chart, zero indexed from left. |
| Y2 | Byte | Bottommost coordinate of the strip chart, zero indexed from top. |

Table 11: Strip Chart Types (Bytes 3-0)

| Type | Description |
| :---: | :---: |
| 0 | Bar |
| 1 | Line |
| 2 | Step |
| 3 | Box |

| $\mathbf{3 . 1 0}$ Update a | Dec | $\mathbf{2 5 4} \mathbf{1 1 1}$ | ID Value |
| :--- | :--- | ---: | :--- |
| Strip Chart | Hex | FE 6F | ID Value |
|  | ASCII | ■ o | ID Value |

Shift the specified strip chart and draw a new value.
ID $\quad$ Byte $\quad$ Chart identification number, value between 0 and 7 .
Value Short Value to add to the chart.

| 4.1 Upload a | Dec | 25436 | ID Size Data | v5.8 |
| :---: | :---: | :---: | :---: | :---: |
| Font File | Hex | FE 24 | ID Size Data |  |
|  | ASCII | - \$ | ID Size Data |  |

Upload a font to a graphic display. To create a font see the Font File Creation section, for upload protocol see the File Transfer Protocol entry. Default font is ID 1.

| ID | Byte | Unique font identification number, value between 0 and $\mathbf{2 5 5}$. |
| :--- | :--- | :--- |
| Size | Short | Size of the entire font file. |
| Data | Byte(s) | Font file data, see the Font File Creation example. |

| 4.2 Set the | Dec | $\mathbf{2 5 4} \mathbf{4 9}$ | ID | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Current Font | Hex | FE 31 | ID |  |
|  | ASCII | $■ 1$ | ID |  |

Set the font in use by specifying a unique identification number. Characters sent after the command will appear in the font specified; previous text will not be affected. Default is 1 .
ID Byte Unique font identification number, value between 0 and 255.
$\begin{array}{llrll|}$\cline { 2 - 5 } \& 4.3 Set Font \& Dec \& $\left.\mathbf{2 5 4 5 0} & \text { LineMargin TopMargin CharSpace LineSpace Scroll }\end{array}\right]$ v5.8

Set the font spacing, or metrics, used with the current font. Changes only appear in text sent after command.

| LineMargin | Byte | Space between left of display and first column of text. Default 0. |
| :--- | :--- | :--- | :--- |
| TopMargin | Byte | Space between top of display area and first row of text. Default 0. |
| CharSpace | Byte | Space between characters. Default 0. |
| LineSpace | Byte | Space between character rows. Default 1. |
| Scroll | Byte | Point at which text scrolls up screen to display additional rows. Default 1. |

| 4.4 Set Box Space | Dec | $\mathbf{2 5 4} \mathbf{1 7 2}$ | Switch | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Mode | Hex | FE AC | Switch |  |
|  | ASCII | $■ 1 / 4$ | Switch |  |

Toggle box space on or off. When on, a character sized box is cleared from the screen before a character is written. This eliminates any text or bitmap remnants behind the character. Default is on.
Switch Byte 1 for on or 0 for off.

## Font File Creation

Matrix Orbital graphic displays are capable of displaying text in a wide variety of styles customizable to suit any project design. Front files alter the style of text and appearance of the display.

By default, a Matrix Orbital graphic display is loaded with a small filled font in slot one and a future bk bt 16 style in slot two. Both are available at www.matrixorbital.ca/software/graphic fonts.

The easiest way to create, add, or modify the fonts of any graphic display is through the MOGD\# tool. This provides a simple graphic interface that hides the more complex intricacies of the font file.

Table 12: Example Font File Header

| Maximum Width | Character Height | ASCII Start Value | ASCII End Value |
| :---: | :---: | :---: | :---: | :---: |
| 5 | 7 | 104 | 106 |

The font file header contains four bytes: First, the number of columns in the widest character; usually ' $w$ ', second, the pixel height of each character, and finally, the start and end values of the character range. The range represents the values that must be sent to the display to trigger the characters to appear on the screen. In the example, the decimal values corresponding to the lowercase letters ' $h$ ' through ' j ' will be used resulting in the range shown.

Table 13: Example Character Table

|  | MSB | LSB | Width |
| :---: | :---: | :---: | :---: |
| h | 0 | 13 | 5 |
| i | 0 | 18 | 3 |
| j | 0 | 21 | 4 |

The character table contains information that allows the display to locate each individual character in a mass of character data. Each character has three bytes; two indicating it's offset in the character data and one indicating its width. The offset takes into account the header and table bytes to point to the first byte of the character data it references. The first byte of the file, maximum width, has an offset of zero. The width byte of each character can be identical as in a fixed width font, or in our case, variable. The character table will become clearer after analyzing the final part of the font file, character data.

Table 14: Character 'h'
Bitmap

| $\mathbf{1}$ | 0 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ | 0 | 0 | 0 | 0 |
| $\mathbf{1}$ | 0 | $\mathbf{1}$ | $\mathbf{1}$ | 0 |
| $\mathbf{1}$ | $\mathbf{1}$ | 0 | 0 | $\mathbf{1}$ |
| $\mathbf{1}$ | 0 | 0 | 0 | $\mathbf{1}$ |
| $\mathbf{1}$ | 0 | 0 | 0 | $\mathbf{1}$ |
| $\mathbf{1}$ | 0 | 0 | 0 | $\mathbf{1}$ |

Table 15: Character 'h' Data

| $\mathbf{1}$ | 0 | 0 | 0 | 0 | $\mathbf{1}$ | 0 | 0 | 84 | $\mathbf{1 3 2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{1}$ | 0 | $\mathbf{1}$ | $\mathbf{1}$ | 0 | $\mathbf{1}$ | 2 D | $\mathbf{4 5}$ |
| $\mathbf{1}$ | 0 | 0 | $\mathbf{1}$ | $\mathbf{1}$ | 0 | 0 | 0 | 98 | $\mathbf{1 5 2}$ |
| $\mathbf{1}$ | $\mathbf{1}$ | 0 | 0 | 0 | $\mathbf{1}$ | $\mathbf{1}$ | 0 | C 6 | $\mathbf{1 9 8}$ |
| 0 | 0 | $\mathbf{1}$ | 0 | 0 | 0 | 0 | 0 | 20 | $\mathbf{3 2}$ |

The character data is a binary graphical representation of each glyph in a font. Each character is drawn on a grid containing as many rows as the height specified in the header and as many columns as the width specified in the character table. Cells are drawn by writing a one in their location and cleared by setting a value of zero. Starting at the top left, moving right, then down, eight of these cells form a character data byte. When all cells are accounted for, zeroes may be added to the last byte to complete $i t$. A sample of an ' $h$ ' glyph is shown above. The data for the ' $i$ ' and ' $j$ ' characters will follow to complete the custom font file displayed below.

Table 16: Example Font File

| Header | 57104106 |
| :---: | :---: |
| Character Table | 0135 |
|  | 0183 |
| Character Data | 0214 |
|  | 1324515219832 |

### 6.5 Bitmaps

|  | 5.1 Upload a | Dec | $\mathbf{2 5 4 9 4}$ | ID Size Data |
| :--- | :--- | ---: | :--- | :--- |
| Bitmap File | Hex | FE 5E | ID Size Data | v5.8 |
|  | ASCII | $■ \wedge$ | ID Size Data |  |

Upload a bitmap to a graphic display. To create a bitmap see the Bitmap File Creation section, for upload protocol see the File Transfer Protocol entry. Start screen is ID 1.

| ID | Byte | Unique bitmap identification number, value between 0 and 255. |
| :--- | :--- | :--- |
| Size | Short | Size of the entire bitmap file. |
| Data | Byte(s) | Bitmap file data, see the Bitmap File Creation example. |

| 5.2 Draw a | Dec | $\mathbf{2 5 4 9 8}$ | ID X Y | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Bitmap from | Hex | FE 62 | ID X Y |  |
| Memory | ASCII | ■ b | ID X Y |  |

Draw a previously uploaded bitmap from memory. Top left corner must be specified for drawing.

| ID | Byte | Unique bitmap identification number, value between 0 and 255. |
| :--- | :--- | :--- |
| X | Byte | Leftmost coordinate of bitmap. |
| Y | Byte | Topmost coordinate of bitmap. |

| 5.3 Draw a Bitmap | Dec | $\mathbf{2 5 4} \mathbf{1 0 0}$ | X1 Y1 Data | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Directly | Hex | FE 64 | X1 Y1 Data |  |
|  | ASCII | ■ d | X1 Y1 Data |  |

Draw a bitmap directly to the graphic display without saving to memory. Cannot be implemented in a script.

| X1 | Byte | Leftmost coordinate of bitmap. |
| :--- | :--- | :--- |
| Y1 | Byte | Topmost coordinate of bitmap. |
| Data | Byte(s) | Bitmap file data, see the Bitmap File Creation example. |

## Bitmap File Creation

In addition to fonts, Matrix Orbital graphic displays can also hold a number of customizable bitmaps to provide further stylistic product integration. Like font files, bitmaps files are most easily uploaded to a display using MOGD\#. However, the critical data component of the bitmap upload command is detailed below for reference.

The bitmap data block is similar to that of a font. However, as a bitmap is a single glyph, only a simple two byte header is required. First, one byte representing the bitmap width is sent, then one byte for the height. Each bitmap is merely encoded in binary fashion using a series of ones and zeroes. Again a grid can be created using the width and height specified in the upload command, populated in the manner above, and converted into byte values. A smiley face example is shown below to indicate the ultimate effect of the Matrix Orbital graphic stylization ability.

Table 17: Smiley Face Bitmap
Table 18:Smiley Face Data

| 0 | $\mathbf{1}$ | 0 | $\mathbf{1}$ | 0 | 0 | 0 | 0 | 50 | 80 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | $\mathbf{1}$ | 0 | 0 | 0 | $\mathbf{1}$ | 0 | 22 | 34 |
| $\mathbf{1}$ | $\mathbf{1}$ | $\mathbf{1}$ | 0 | 0 | 0 | 0 | 0 | EO | $\mathbf{2 2 4}$ |

Table 19: Example Bitmap File

| Header | 54 |
| :---: | :---: |
| Bitmap Data | 8034224 |

### 6.6 General Purpose Output

| 6.1 General Purpose | Dec | $\mathbf{2 5 4} \mathbf{8 7}$ | Number | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Output On | Hex | FE 57 | Number |  |
|  | ASCII | $■ \mathbf{W}$ | Number |  |

Turns the specified GPO on, sourcing current from an output of five volts.
Number Byte GPO to be turned on.

| 6.2 General Purpose | Dec | $\mathbf{2 5 4} \mathbf{8 6}$ | Number |
| :--- | :--- | ---: | :--- |
| Output Off | Hex | FE 56 | Number |
|  | ASCII | $■ V$ | Number |

Turns the specified GPO off, sinking current to an output of zero volts.
Number Byte GPO to be turned off.

| 6.3 Set Start Up | Dec | $\mathbf{2 5 4} \mathbf{1 9 5}$ | Number State | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| GPO State | Hex | FE C3 | Number State |  |
|  | ASCII | $■$ | Number State |  |

Sets and saves the start-up state of the specified GPO in non-volatile memory. Changes will be seen on start up.
Number Byte GPO to be controlled.

State Byte 1 for on or 0 for off.

### 6.7 Keypad

| 7.1 Auto Transmit | Dec | $\mathbf{2 5 4 6 5}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Key Presses On | Hex | FE 41 |  |
|  | ASCII | $■ A$ |  |

Key presses are automatically sent to the host when received by the display. Use this mode for I2C transactions.

| 7.2 Auto Transmit | Dec | $\mathbf{2 5 4} \mathbf{7 9}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Key Presses Off | Hex | FE 4F |  |
|  | ASCII | $■ 0$ |  |

Key presses are held in the 10 key buffer to be polled by the host using the Poll Key Press command. Default is Auto Transmit on.

| 7.3 Poll Key | Dec | $\mathbf{2 5 4} \mathbf{3 8}$ | v5.8 |
| :--- | :--- | ---: | ---: |
| Press | Hex | FE $\mathbf{2 6}$ |  |
|  | ASCII | ■ \& |  |

Reads the last unread key press from the 10 key display buffer. If another key is stored in the buffer the MSb will be 1 , the MSb will be 0 when the last key press is read. If there are no stored key presses a value of 0 will be returned. Auto transmit key presses must be turned off for this command to be successful, do not use with $I^{2} C$.
Response Byte Value of key pressed (MSb determines additional keys to be read).

| 7.4 Clear Key | Dec | $\mathbf{2 5 4 6 9}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Buffer | Hex | FE 45 |  |
|  | ASCII | $■$ E |  |

Clears all key presses from the key buffer.

| 7.5 Set Debounce | Dec | $\mathbf{2 5 4} \mathbf{8 5}$ | Time |
| :--- | :--- | ---: | :--- |
| Time | Hex | FE $\mathbf{5 5}$ | Time |
|  | ASCII | $■ \mathbf{U}$ | Time |

Sets the time between a key press and a key read by the display. Most switches will bounce when pressed; the debounce time allows the switch to settle for an accurate read. Default is 8 representing approximately 52 ms .
Time Byte Debounce increment (debounce time $=$ Time * 6.554 ms ).

| 7.6 Set Auto | Dec | $\mathbf{2 5 4} \mathbf{1 2 6}$ | Mode |
| :--- | :--- | ---: | :--- |
| Repeat Mode | Hex | FE 7E | Mode |
|  | ASCII | ■ DEL | Mode |

Sets key press repeat mode to typematic or hold. In typematic mode if a key press is held, by default the key value is transmitted immediately, then 5 times a second after a 1 second delay. In hold mode, the key down value is transmitted once when pressed, and then the key up value is sent when the key is released. Default is typematic. Mode Byte 1 for hold mode or 0 for typematic.

| 7.7 Auto Repeat | Dec | $\mathbf{2 5 4} 96$ | v5.8 |
| :--- | :--- | ---: | :---: |
| Mode Off | Hex | FE 60 |  |
|  | ASClI | $■ `$ |  |

Turns auto repeat mode off. Default is on (typematic).
$\left.\begin{array}{|llrl|}\hline \text { 7.8 Assign Keypad } & \text { Dec } & \mathbf{2 5 4} \mathbf{2 1 3} & \text { Key Down Key Up } \\ \text { Codes } & \text { Hex } & \text { FE D5 } & \text { Key Down Key Up } \\ & \text { ASCII } & \text { F } & \text { Key Down Key Up }\end{array}\right]$ V5.8

Assigns the key down and key up values sent to the host when a key press is detected. A key up and key down value must be sent for every key, a value of 255 will leave the key unaltered. Defaults are shown below.
Key Down Bytes [25] Key down values, beginning at row one column one moving right then down.
Key Up Bytes [25] Key up values, beginning at row one column one moving right then down.

Table 20: Default Key Down Values

| Key Down |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $A(65)$ | $B(66)$ | $C(67)$ | $D(68)$ | $E(69)$ |
| $F(70)$ | $G(71)$ | $H(72)$ | $I(73)$ | $J(74)$ |
| $K(75)$ | $L(76)$ | $M(77)$ | $N(78)$ | $O(79)$ |
| $P(80)$ | $Q(81)$ | $R(82)$ | $S(83)$ | $T(84)$ |
| $U(85)$ | $V(86)$ | $W(87)$ | $X(88)$ | $Y(89)$ |

Table 21: Default Key Up Values

|  | KeyUp |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $a(97)$ | $b(98)$ | $c(99)$ | $d(100)$ | $e(101)$ |
| $f(102)$ | $g(103)$ | $h(104)$ | $i(105)$ | $j(106)$ |
| $k(107)$ | $l(108)$ | $m(109)$ | $n(110)$ | $o(111)$ |
| $p(112)$ | $q(113)$ | $r(114)$ | $s(115)$ | $t(116)$ |
| $u(117)$ | $v(118)$ | $w(119)$ | $x(120)$ | $y(121)$ |

### 6.8 Display Functions

| 8.1 Backlight | Dec | $\mathbf{2 5 4} \mathbf{6 6}$ | Minutes | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| On | Hex | FE 42 | Minutes |  |
|  | ASCII | $■$ B | Minutes |  |

Turns the display backlight on for a specified length of time. If an inverse display color is used this command will essentially turn on the text.
Minutes Byte Number of minutes to leave backlight on, a value of 0 leaves the display on indefinitely.

| 8.2 Backlight | Dec | $\mathbf{2 5 4} \mathbf{7 0}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Off | Hex | FE 46 |  |
|  | ASCII | $■ ~ F$ |  |

Turns the display backlight off. If an inverse display colour is used this command will turn off the text.

| 8.3 Set | Dec | $\mathbf{2 5 4 1 5 3}$ | Brightness | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Brightness | Hex | FE 99 | Brightness |  |
|  | ASCII | $■$ Ö | Brightness |  |

Immediately sets the backlight brightness. If an inverse display color is used this represents the text colour intensity instead. Default is 255.
Brightness Byte Brightness level from 0(Dim) to 255(Bright).

| 8.4 Set and Save | Dec | $\mathbf{2 5 4} \mathbf{1 5 2}$ | Brightness | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Brightness | Hex | FE $\mathbf{9 8}$ | Brightness |  |
|  | ASCII | ■ $\mathbf{y}$ | Brightness |  | Immediately sets and saves the backlight brightness. Although brightness can be changed using the set command, it is reset to this saved value on start up. Default is 255.

Brightness Byte Brightness level from 0(Dim) to 255(Bright).

| $\mathbf{8 . 5}$ Set | Dec | $\mathbf{2 5 4 8 0}$ | Contrast | $\mathbf{v 5 . 8}$ |
| :--- | :--- | ---: | :--- | :--- |
| Contrast | Hex | FE 50 | Contrast |  |
|  | ASCII | $■ \mathbf{P}$ | Contrast |  |

Immediately sets the contrast between background and text. If an inverse display color is used this also represents the text brightness. Default is 128.
Contrast Byte Contrast level from 0(Light) to 255(Dark).

| 8.6 Set and Save | Dec | $\mathbf{2 5 4 1 4 5}$ | Contrast | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Contrast | Hex | FE 91 | Contrast |  |
|  | ASCII | ■ æ | Contrast |  |

Immediately sets and saves the contrast between background and text. Although contrast can be changed using the set command, it is reset to this saved value on start up. Default is 128.
Contrast Byte Contrast level from 0(Light) to 255(Dark).

### 6.9 Filesystem

| 9.1 Delete | Dec | 254338933 | v5.8 |
| :---: | :---: | :---: | :---: |
| Filesystem | Hex | FE 215921 |  |
|  | ASCII | ■! Y! |  |
| Completely prevent accid |  | s and bitmap <br> tion. To ensu |  |

| 9.2 Delete a | Dec | $\mathbf{2 5 4} \mathbf{1 7 3}$ | Type ID | $\mathbf{v 5 . 8}$ |
| :--- | :--- | ---: | :--- | :--- |
| File | Hex | FE AD | Type ID |  |
|  | ASCII | ■i | Type ID |  |

Removes a single font or bitmap file given the type and unique identification number. Cycle power after deletion.

| Type | Byte | 0 for font or 1 for bitmap. |
| :--- | :--- | :--- |
| ID | Byte | Unique identification number of font or bitmap to be deleted, value between 0 and 255. |

| 9.3 Get Filesystem | Dec | $\mathbf{2 5 4} \mathbf{1 7 5}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Space | Hex | FE AF |  |
|  | ASCII | ■ " |  |

Returns the amount of space remaining in the display for font or bitmap uploads.
Response Integer Number of bytes remaining in memory.

| 9.4 Get Filesystem | Dec | $\mathbf{2 5 4} \mathbf{1 7 9}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Directory | Hex | FE B3 |  |
|  | ASCII | $■ ~ \mid$ |  |

Returns a directory to the contents of the filesystem. The total number and type of each entry will be provided.

| Response | Short | Number of entries. |
| :--- | :--- | :--- |
|  | Byte(s) | One entry for every file, 8 identification bytes for each entry. |

Table 22: Filesystem Identification Bytes

| Byte | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Description | Size(MSB) | Size | Size | Size(LSB) | Type(4)/ID(4) | ID (LSB) | Start Page (MSB) | Start Page (LSB) |

Table 23: Extended Byte Descriptions

First four bits designate file type, 0 for font or 1 for bitmap, remaining 12 bits indicate ID number.
Start Page
Memory start page, a value of 0 indicates entry is not in use.

| 9.5 Filesystem | Dec | $\mathbf{2 5 4} \mathbf{1 7 6}$ | Size Data | v5.8 |
| :--- | :--- | ---: | :--- | :--- |
| Upload | Hex | FE B0 | Size Data |  |
|  | ASCII | ■ $\quad$ Size Data |  |  |

This command will upload a filesystem image to the display. The size used is almost always the entire memory. Filesystem data can be uploaded LSB to MSB using the File Transfer Protocol.

| Size | Integer | Size of the filesystem to upload. |
| :--- | :--- | :--- | :--- |
|  | Dat |  |

Data Byte(s) Filesystem data to upload.

| 9.6 Filesystem | Dec | $\mathbf{2 5 4} \mathbf{4 8}$ | v5.8 |
| :--- | :--- | ---: | :--- |
| Download | Hex | FE 30 |  |
|  | ASCII | $■ 0$ |  |

Downloads complete filesystem containing all fonts and bitmaps stored in the display using the File Transfer Protocol. A veritable heap of data.
Response Integer Size of the filesystem to download.
Byte(s) Filesystem data to download.

| 9.7 File Download | Dec | 254178 | Type ID |
| :---: | :---: | :---: | :---: |
|  | Hex ASCII | FE B2 | Type ID |
|  |  |  | Type ID |
| Downloads a single font or bitmap file from the display to the host using the File Transfer Protocol. |  |  |  |
| Type | Byte | Variable length, see File Types. |  |
| ID | Byte | Unique identification number of font or bitmap to download, value between 0 and 1023. |  |
| Response | Short | File size. |  |
|  | Byte(s) | File data. |  |

|  | 9.8 File | Dec | $\mathbf{2 5 4} \mathbf{1 8 0}$ | OldType OldID NewType NewID |
| :--- | :--- | ---: | :--- | :--- |
| Move | Hex | FE B4 | OldType OldID NewType NewID | v5.8 |
|  | ASCII | $\boxed{ } \dagger$ | OldType OldID NewType NewID |  |

Used to move a single file and/or alter the type of an existing file. Old ID location must be valid and new ID empty.

| OldType | Byte | Original file type, value between 0 and 1023, see File Types. |
| :--- | :--- | :--- |
| OldID | Byte | Original unique file identification number, value between 0 and 1023. |
| NewType | Byte | New file type, see File Types. |
| NewID | Byte | New unique file identification number. |

Table 24: File Types

| Font | Bitmap | Script | Animation |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |

## File Transfer Protocol

Once a bitmap or font file has been created and paired to its command it must be sent using a file protocol developed specifically for Matrix Orbital displays. Once a file upload command has been sent requesting a unique reference number and specifying the file size required, the display will respond indicating whether it has enough room to save the file or not. As is the case throughout the upload protocol, a response of 1 will indicate confirmation while an 8 corresponds to rejection and will terminate the session.

Table 25: Upload Protocol Responses

| Value | Action | Description |
| :---: | :---: | :---: |
| 1 | Acknowledged | Transfer successful, upload continues |
| $\mathbf{8}$ | Not Acknowledged | Transfer failed, abort upload |

Once a file is confirmed to fit within the display, the upload will begin. A protocol is used here to ensure each byte is uploaded successfully. After each byte is sent, the module will echo it back to the host. It should then be checked against the value originally sent before a confirmation byte of 1 is returned. If the transmitted and echoed values do not match the upload should be aborted by sending a value of 8 instead. The upload will continue in this manner as indicated by the examples below which utilize familiar font and bitmap files.

| Host | Display | Comments |
| :---: | :---: | :---: |
| 254 |  | Command Prefix |
| 36 |  | Upload Font File Command |
| 1 |  | Reference ID LSB |
| 0 |  | Reference ID MSB |
| 31 |  | Font File Size LSB |
| 0 |  | Font File Size |
| 0 |  | Font File Size |
| 0 |  | Font File MSB |
|  | 1 | Acknowledge Size |
| 5 |  | First Font Data Byte |
|  | 5 | Echo Data Byte |
| 1 |  | Acknowledge Data Byte |
| 7 |  | Second Font Data Byte |
| ... | $\ldots$ | ... |
| 96 |  | Last Font Data Byte |
|  | 96 | Echo Data Byte |
| 1 |  | Acknowledge Data Byte |

| Host | Display | Comments |
| :---: | :---: | :---: |
| 254 |  | Command Prefix |
| 94 |  | Upload Bitmap File Command <br> Reference ID LSB |
| 1 |  | Reference ID MSB |
| 0 |  | Bitmap File Size LSB |
| 5 |  | Bitmap File Size |

It should be noted that the display has a timeout setting of 2.1 seconds before it resets to prevent it from hanging during the upload process. Upon reset, the values 254 and 212 will be returned to indicate an error or lengthy delay has occurred in the upload process. If everything goes smoothly, the protocol will end with the host transmitting a final confirmation byte and the font will be stored in the display ready for any application.

### 6.10 Data Security

|  | 10.1 Set | Dec | $\mathbf{2 5 4} \mathbf{1 4 7}$ | Mode |
| :--- | :--- | ---: | :--- | :--- |
| Remember | Hex | FE 93 | Mode | v5.8 |
|  | ASCII | $■ 0 \hat{0}$ | Mode |  |

Allows changes to specific settings to be saved to the display memory. Writing to non-volatile memory can be slow and each change consumes 1 write of at least 100,000 available. The Command Summary outlines which commands are saved always, never, and when this command is on only. Remember is off by default.
Mode Byte 1 for on or 0 for off.

| 10.2 Set Data | Dec | 254202245160 | Level | v5.8 |
| :---: | :---: | :---: | :---: | :---: |
| Lock | Hex | FE CA F5 A0 | Level |  |
|  | ASCII | $\square \underline{\mathrm{LL}}$ 〕á | Level |  |

Temporarily locks certain aspects of the display to ensure no inadvertent changes are made. The lock is released after a power cycle. A new level overrides the old, and levels can be combined. Default is 0 .
Level Byte Lock level, see Data Lock Bits table.

Table 28: Data Lock Bits

| Display | Command | Filesystem | Setting | Address | Reserved | Reserved | Reserved |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

Table 29: Lock Parameters

| Reserved | Place holders only, should be 0 |
| :---: | :---: |
| Address | Locks the Baud Rate and I2C address |
| Setting | Locks all settings from being saved |
| Filesystem | Locks all bitmaps and fonts |
| Command | Locks all commands, text can still be written |
| Display | Locks entire display, no new text can be displayed |

| 10.3 Set and Save | Dec | 254203245160 | Level | v5.8 |
| :---: | :---: | :---: | :---: | :---: |
| Data Lock | Hex | FE CB F5 A0 | Level |  |
|  | ASCII |  | Level |  |

Locks certain aspects of the display to ensure no inadvertent changes are made. The lock is not affected by a power cycle. A new level overrides the old, and levels can be combined. Default is 0 .
Level Byte See Data Lock Bits table.

### 6.11 Miscellaneous

| 11.1 Write | Dec | $\mathbf{2 5 4 5 2}$ | Data |
| :--- | :--- | ---: | :--- |
| Customer Data | Hex | FE $\mathbf{3 4}$ | Data |
|  | ASCII | $■ 4$ | Data |

Saves a user defined block of data to non-volatile memory. Useful for storing display information for later use.
Data Byte(s) User defined data, 16 bytes.

| 11.2 Read Customer Data | Dec | 25453 | v5.8 |
| :---: | :---: | :---: | :---: |
|  | Hex FE |  |  |
|  | ASCII | - 5 |  |
| Reads data previously written to non-volatile memory. Data is only changed when written, surviving power cycles. |  |  |  |
| Response B |  | viously |  |

| 11.3 Read Version | Dec | 25454 | v5.8 |
| :---: | :---: | :---: | :---: |
| Number | Hex | FE 36 |  |
|  | ASCII | ■ 6 |  |
| Causes display to respond with its firmware version number. Often used as a communication test. |  |  |  |
| Response Byte | Conv | to hexad |  |

```
11.4 Read Dec 25455 v8.0
Module Type Hex FE 37
ASCII ■ 7
```

Causes display to respond with its module number.
Response Byte Module number, see Sample Module Type Response for a partial list.

Table 30: Sample Module Type Responses

## 7 Appendix

### 7.1 Command Summary

Available commands below include identifying number, required parameters, the returned response and an indication of whether settings are remembered always, never, or with remember set to on.

Table 31: Communication Command Summary

| Name | Dec | Hex | ASCII | Parameters | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Change Baud Rate | 57 | 39 | 9 | Byte | None | Always |
| Change I2C Slave Address | 51 | 33 | 3 | Byte | None | Always |
| Set a Non-Standard Baud Rate | 164 | A4 | $\tilde{n}$ | Short | None | Always |
| Turn Software Flow Control On | 58 | $3 A$ | $:$ | Byte[2] | None | Remember On |
| Turn Software Flow Control Off | 59 | $3 B$ | $;$ | None | None | Remember On |

Table 32: Text Command Summary

| Name | Dec | Hex | ASCII | Parameters | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Clear Screen | 88 | 58 | X | None | None | Never |
| Go Home | 72 | 48 | H | None | None | Never |
| Set Cursor Position | 71 | 47 | G | Byte[2] | None | Never |
| Set Cursor Coordinate | 121 | 79 | y | Byte[2] | None | Never |
| Auto Scroll On | 81 | 51 | Q | None | None | Remember On |
| Auto Scroll Off | 82 | 52 | R | None | None | Remember On |

Table 33: Drawing Command Summary

| Name | Dec | Hex | ASCII | Parameters | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Set Drawing Colour | 99 | 63 | c | Byte | None | Remember On |
| Draw Pixel | 112 | 70 | p | Byte[2] | None | Never |
| Draw a Line | 108 | 6 C | l | Byte[4] | None | Never |
| Continue a Line | 101 | 65 | e | Byte[2] | None | Never |
| Draw a Rectangle | 114 | 72 | r | Byte[5] | None | Never |
| Draw a Filled Rectangle | 120 | 78 | x | Byte[5] | None | Never |
| Initialize a Bar Graph | 103 | 67 | g | Byte[6] | None | Remember On |
| Draw a Bar Graph | 105 | 69 | i | Byte[2] | None | Never |
| Initialize a Strip Chart | 106 | $6 A$ | n | Byte[5], Short[2], | None | Remember On |
| Update a Strip Chart | 107 | $6 B$ | o | Byte, Short | None | Never |

Table 34: Font Command Summary

| Name | Dec | Hex | ASCII | Parameters | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Upload a Font File | 36 | 24 | $\$$ | Short, Integer, Byte[] | See Font File Creation | Always |
| Set the Current Font | 49 | 31 | 1 | Short | None | Never |
| Set Font Metrics | 50 | 32 | 2 | Byte[5] | None | Remember On |
| Set Box Space Mode | 172 | AC | $1 / 4$ | Byte | None | Remember On |

Table 35: Bitmap Command Summary

| Name | Dec | Hex | ASCII | Parameters | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Upload a Bitmap File | 94 | 5 E | ^ | Short, Integer, Byte[] | See Bitmap File <br> Creation | Always |
| Draw a Bitmap from Memory | 98 | 62 | b | Short, Byte[2] | None | Never |
| Draw a Bitmap Directly | 100 | 64 | d | Byte[2], Byte[] | None | Never |

Table 36: General Purpose Output Command Summary

| Name | Dec | Hex | ASCII | Parameters | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| General Purpose Output On | 86 | 56 | V | Byte | None | Never |
| General Purpose Output Off | 87 | 57 | W | Byte | None | Never |
| Set Start Up GPO State | 195 | C3 | $\vdash$ | Byte[2] | None | Always |

Table 37: Keypad Command Summary

| Name | Dec | Hex | ASCII | Parameters |  | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Auto Transmit Key Presses On | 65 | 41 | A | None | None | Remember On |  |
| Auto Transmit Key Presses Off | 79 | 4 F | - |  | None | None | Remember On |
| Poll Key Press | 38 | 26 | $\&$ | None | Byte | Never |  |
| Clear Key Buffer | 69 | 45 | E | None | None | Never |  |
| Set Debounce Time | 85 | 55 | U | Byte | None | Remember On |  |
| Auto Repeat Mode Off | 96 | 60 |  |  | None | None | Remember On |
| Assign Keypad Codes | 213 | D5 | C | Byte[25], Byte[25] | None | Always |  |

Table 38: Display Functions Command Summary

| Name | Dec | Hex | ASCII | Parameters | Response | Remembered |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Backlight On | 66 | 42 | B | Byte | None | Remember On |
| Backlight Off | 70 | 46 | F | None | None | Remember On |
| Set Brightness | 153 | 99 | Ö | Byte | None | Remember On |

### 8.3 Accessories

## Communication

Table 49: Communication Accessories

Peripherals
Table 50: Peripheral Accessories

## 9 Definitions

ASCII: American standard code for information interchange used to give standardized numeric codes to alphanumeric characters.

BPS: Bits per second, a measure of transmission speed.

Byte: An unsigned data packet that is eight bits long.
GPO: General purpose output, used to control peripheral devices from a display.

GUI: Graphical user interface.
Hexadecimal: A base 16 number system utilizing symbols 0 through F to represent the values 0-15.
$1^{2} \mathrm{C}$ : Inter-integrated circuit protocol uses clock and data lines to communicate short distances at slow speeds from a master to up to 128 addressable slave devices. A display is a slave device.

LSB: Least significant bit or byte in a transmission, the rightmost when read.

MSB: Most significant bit or byte in a transmission, the leftmost when read.

RS232: Recommended standard 232, a common serial protocol. A low level is -30 V , a high is +30 V .
SDA: Serial data line used to transfer data in $I^{2} C$ protocol. This open drain line should be pulled high through a resistor. Nominal values are between 1 K and $10 \mathrm{~K} \Omega$.

SCL: Serial clock line used to designate data bits in $I^{2}$ C protocol. This open drain line should be pulled high through a resistor. Nominal values are between 1 K and $10 \mathrm{~K} \Omega$.

Short: An unsigned data packet that is sixteen bits long, in little Endian format.
STN: Super-twisted nematic in reference to an LCD. In a relaxed or nematic state, crystals orientate themselves in the same direction and allow light to pass. In an excited state these crystals align to block light. Super-twisted crystals move from 180 to 270 degrees providing greater contrast than TN models.

TTL: Transistor-transistor logic applied to serial protocol. Low level is 0 V while high logic is 5 V .
