

Features

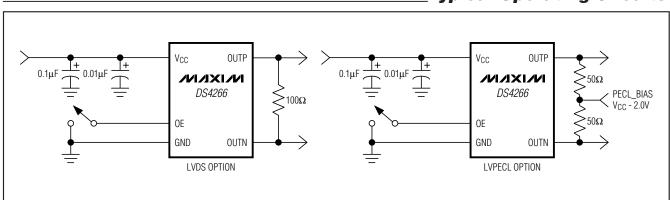

- ♦ < 0.7ps_{RMS} (typ) from 12kHz to 20MHz Jitter
- LVDS or LVPECL Output Types
- ♦ 3.3V Operating Voltage
- 5.0mm x 3.2mm x 1.49mm, 10-Pin LCCC Ceramic Package
- ♦ -40°C to +85°C Operating Temperature Range
- Lead-Free/RoHS Compliant

_Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
DS4266D+	-40°C to +85°C	10 LCCC
DS4266P+	-40°C to +85°C	10 LCCC

+Denotes a lead(Pb)-free/RoHS-compliant package. The lead finish is JESD97 category e4 (Au over Ni) and is compatible with both lead-based and lead-free soldering processes.

Pin Configuration and Selector Guide appear at end of data sheet.

General Description

The DS4266 surface-mount ceramic crystal oscillator is part of Maxim's DS4-XO crystal oscillator product family. The DS4266 is a 266MHz crystal oscillator designed to support high-performance DDR memory applications that require a stable, low-jitter, and tight duty-cycle clock source. The device provides an overall accuracy and stability better than ±50ppm, including aging. Jitter performance is better than 0.7psRMS typically over a 12kHz to 20MHz bandwidth, and duty-cycle performance is better than 48%/52%.

The DS4266 has an output frequency of 266MHz, and it supports LVDS and LVPECL output types. The DS4266 is constructed using a fundamental crystal in conjunction with high-performance silicon germanium PLL technology, enabling very low phase noise and phase jitter performance. The device operates from a $3.3V \pm 5\%$ power supply and consumes a maximum current of 100mA.

The DS4266 is packaged in a miniature 5mm x 3.2mm x 1.49mm, 10-lead LCCC ceramic package, making it suitable for applications where board space is critical.

ABSOLUTE MAXIMUM RATINGS

Power-Supply Voltage (V _{CC})	0.3V, +4V
Operating Temperature Range	40°C to +85°C
Junction Temperature	+150°C

Storage Temperature Range55°C to +85°C Soldering Temperature Profile (3 passes max of reflow)Refer to the IPC/JEDEC

J-STD-020 Specification.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{CC} = 3.135V to 3.465V, T_A = $-40^{\circ}C$ to $+85^{\circ}C$, unless otherwise noted.)

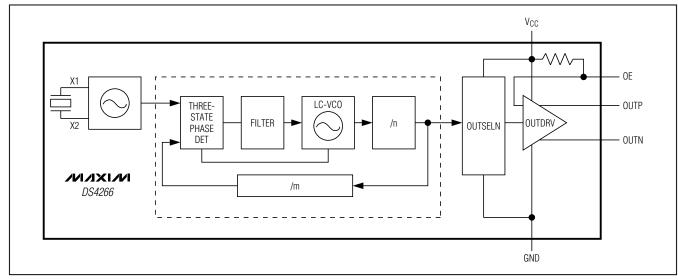

Figure 1. Functional Diagram

Detailed Description

The DS4266 consists of a fundamental-mode crystal and synthesizer IC packaged in a 5mm x 3.2mm x 1.49mm, 10-pin LCCC ceramic package. The device produces a frequency output of 266.00MHz. Two differential output types are available: LVDS and LVPECL. The device output can be enabled or disabled through the OE signal input. When the OE signal is low, LVPECL

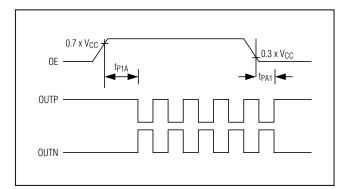

Figure 2. LVDS Output Timing Diagram When OE Is Enabled and Disabled

outputs go to the PECL_BAS level of V_{CC} - 2.9V, while the LVDS outputs are a logical 1. See Figures 2 and 3 for LVDS and LVPECL output timing diagrams.

Additional Information

For more available frequencies in the DS4-XO family, refer to the DS4125 data sheet at **<u>www.maxim-</u>ic.com/DS4125**.
