

## MAX31343 Shield

Evaluates: MAX31343

### General Description

The MAX31343 shield is a fully assembled and tested PCB to evaluate the MAX31343, low-cost, extremely accurate, real-time clock (RTC) with an I<sup>2</sup>C interface and power management. The shield operates from a single supply, either from a USB or external power supply, and the integrated microelectromechanical systems (MEMS) resonator enhances the long-term accuracy and eliminates the external crystal requirement in the system. This device is accessed through an I<sup>2</sup>C serial interface provided by a MAX32625 PICO board.

The MAX31343 shield provides the hardware and software user interface (GUI) necessary to evaluate the MAX31343. The shield includes a MAX31343EKA+T. It connects to the PC through a MAX32625 PICO board and a Micro USB cable.

### Features

- Easy Evaluation of the MAX31343
- +1.6V to +5.5V Single-Supply Operation
- Proven PCB Layout
- Fully Assembled and Tested
- Arduino®/Mbed® Platform Compatible

### Shield Photo

Arduino is a registered trademark of Arduino, LLC.  
Mbed is a registered trademark of Arm Limited.  
Windows is a registered trademark of Microsoft Corporation.

### Shield Contents

- Assembled MAX32625 PICO controller board
- Micro USB cable
- Assembled circuit board including MAX31343EKA+T

### Quick Start

#### Required Equipment

- One pico ammeter for measuring the current
- One oscilloscope and one oscilloscope probe
- One PC or laptop with Microsoft Windows® 7 or later
- One USB A male to Micro-B male cable
- One assembled and programmed MAX32625 PICO board
- One MAX31343 shield

Ordering Information appears at end of data sheet.

### PICO Board Photo

**Procedure**

The shield is fully assembled and tested. Use the following steps to verify board operation.

- 1) Place the MAX31343 shield on a nonconductive surface to ensure that nothing on the PCB gets shorted to the workspace.
- 2) Verify that all jumpers are in their default position as shown in [Table 1](#).
- 3) Connect the MAX32625 PICO board to the shield at the location shown as MAX32625 PICO ([Figure 1](#)).
- 4) Connect the USB Type A male to Micro-B male cable between the MAX32625 PICO board and PC/laptop.
- 5) Go to the MAX31343 shield product page to download and install the latest version of the MAX31343 RTC SHIELD Software.
- 6) Open the MAX31343 RTC SHIELD Software, shown in [Figure 2](#).

Figure 1. Connection and Setup

**Table 1. Jumper Settings**

JUMPER	SHUNT POSITION	DESCRIPTION
JU1	1-2*	Connects clock output to pin 6 of P2 Arduino/Mbed connector
	Open	Disconnects clock output from Arduino/Mbed connector
JU2	1-2	Connects backup supply to external DC supply
	1-3	Connects backup supply to supercapacitor
	1-4*	Connects backup supply to ground
	Open	Disconnects backup supply
JU3	1-2*	Connects interrupt signal to pin 3 of P2 Arduino/Mbed connector
	Open	Disconnects interrupt signal from Arduino/Mbed connector
JU4	1-2	Connects VCC supply to +1.8V on-board supply
	1-3*	Connects VCC supply to +3.3V on-board supply
	1-4	Connects VCC supply to +5.0V on-board supply
	1-5	Connects VCC supply to external DC supply
	Open	Disconnects VCC
JU5	1-2*	Connects VCC to MAX31343 IC WLP package (U1)
	Open	Disconnects VCC from MAX31343 IC WLP package (U1)
JU8	1-2*	Connects square-wave output to pin 4 of P2 Arduino/Mbed connector
	Open	Disconnects square-wave output from Arduino/Mbed connector
JU10	1-2*	Sets MAX31343 WLP package (U1) IC under test
	2-3	Sets MAX31343 TDFN package (U2) IC under test
JU11	1-2*	Connects VCC to MAX31343 IC TDFN package (U2)
	Open	Disconnects VCC from MX31343 IC TDFN package (U2)
JU12	1-2*	Connects VBAT to MAX31343 IC WLP package (U1)
	Open	Disconnects VBAT from MAX31343 IC WLP package (U1)
JU13	1-2*	Connects VBAT to MAX31343 IC TDFN package (U2)
	Open	Disconnects VBAT from MAX31343 IC TDFN package (U2)

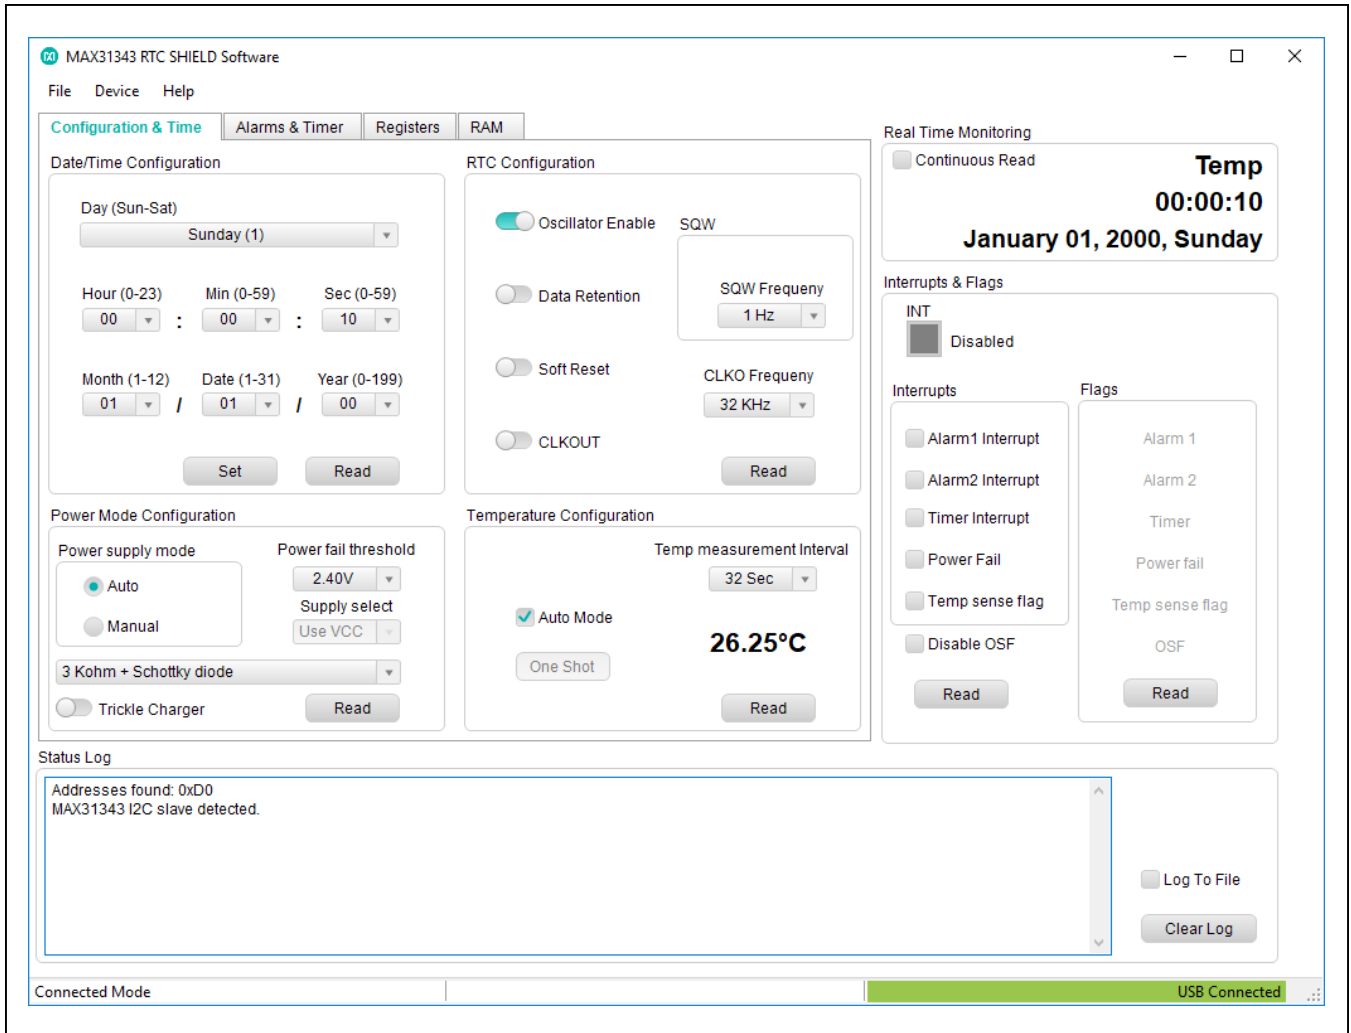

Figure 2. MAX31343 RTC SHIELD Software—Configuration & Time Tab

## Detailed Description

The MAX31343 shield is a low-cost, extremely accurate RTC. It is driven by an internal temperature-compensated microelectromechanical systems (MEMS) resonator. The oscillator provides a stable and accurate reference clock and maintains the RTC to within  $\pm 0.432$  seconds-per-day accuracy from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . The RTC device is accessed through an I<sup>2</sup>C serial interface.

The RTC maintains seconds, minutes, hours, day, date, month, year, and century information. The date at the end of the month is automatically adjusted for months with fewer than 31 days, including corrections for leap year up to the year 2199. The clock operates in the 24-hour format. Other features including two programmable time-of-day alarms, interrupt output, uncompensated programmable clock output, and temperature-compensated programmable square-wave output. A voltage reference and comparator circuit monitor the status of VCC to detect power failures and automatically switch to the backup supply when necessary.

## Detailed Description of Software and Functional Test Procedure

### Real Time Monitoring

To monitor the time and date, on the **Configuration & Time** tab, in the **RTC Configuration** group box, enable the **Oscillator Enable toggle** button, and in the **Real Time Monitoring** group box, check the **Continuous Read** checkbox for continuous reading.

### Current Draw in Timekeeping Mode

To measure the current draw under normal RTC conditions without any interrupt or CLKO output:

- 1) Remove the jumper from JU5.
- 2) With the output set to +3.3V and disabled, connect the negative terminal of the pico ammeter to the pin 1 of JU5 (marked as a white dot) and the positive terminal to pin 2 of JU5.
- 3) On the **Configuration & Time** tab, in the **Date/Time Configuration** group box, click the **Read** button. In the **RTC Configuration** group box, disable the **CLKOUT** toggle button, and select **1Hz** in **SQW Frequency** drop-down list. In the **Real Time Monitoring** section, uncheck the **Continuous Read** checkbox.
- 4) The reading on the pico ammeter is the current consumed by the MAX31343 IC only. It should be around 940nA.

### CLKOUT Frequency

On the **Configuration & Time** tab of the software, in the **RTC Configuration** group box, enable the **CLKOUT** toggle button and select the desired frequency. The clock output can be monitored using an oscilloscope connected to the CLKO test point (TP7). A frequency counter can also be used to measure the clock frequency accurately.

### Alarm and Timer Configuration

Use the **Alarm & Timer Configuration** tab to configure Alarm 1, Alarm 2, and timer. ([Figure 3](#))

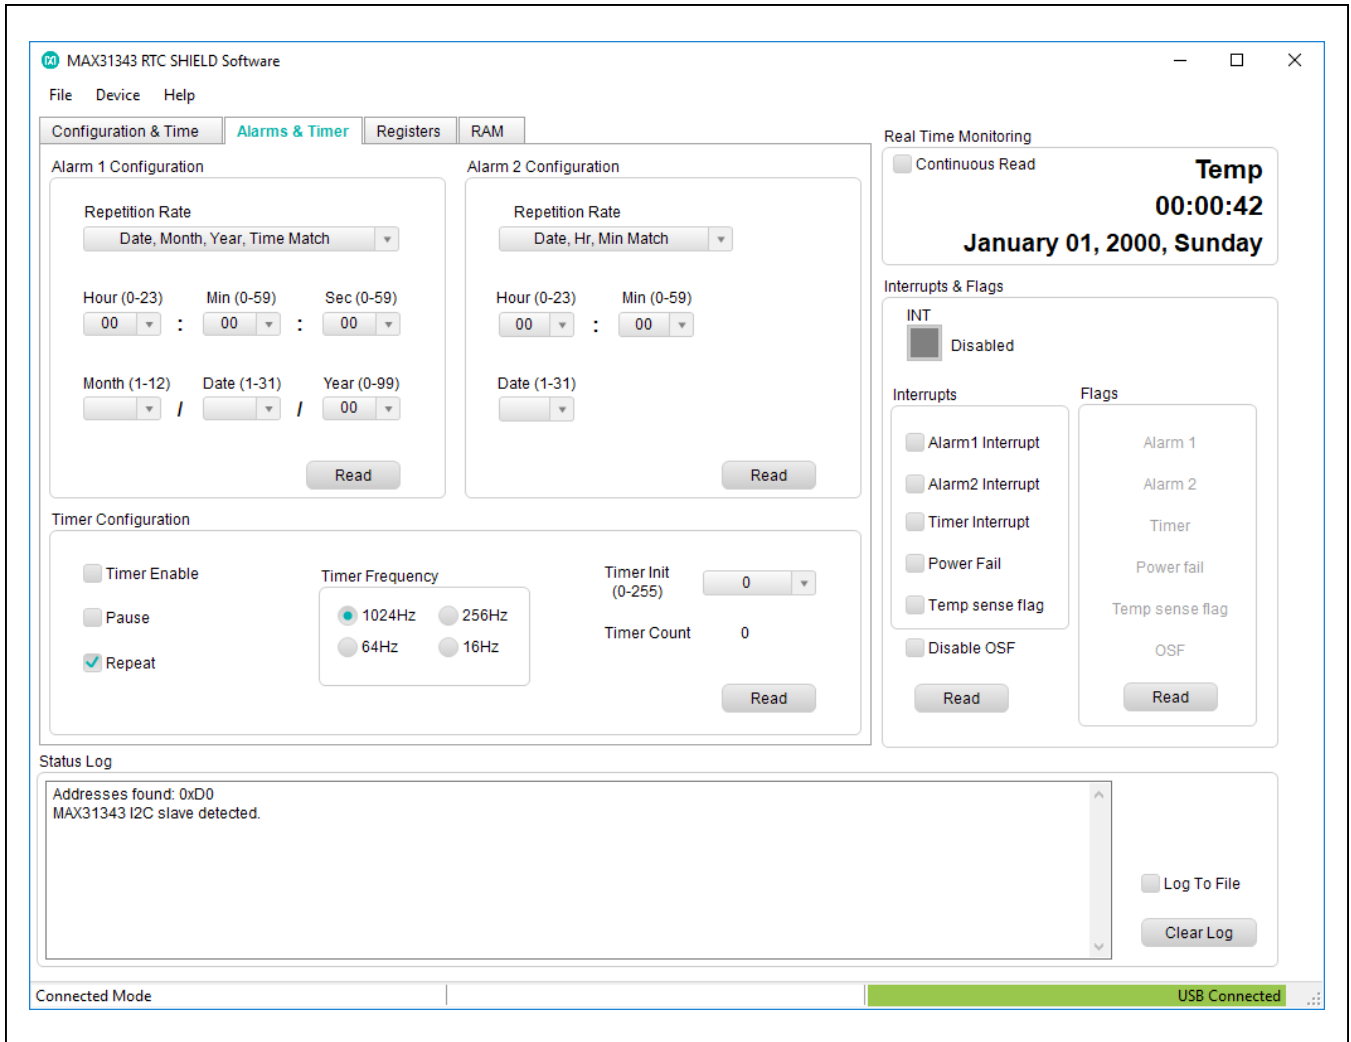

Figure 3. MAX31343 RTC SHIELD Software—Alarms & Timer Page

### Registers Tab

Write and read the MAX31343 IC register map in the Register tab. (Figure 4)
