## General Description

The MAX338/MAX339 are monolithic, CMOS analog multiplexers (muxes). The 8 -channel MAX338 is designed to connect one of eight inputs to a common output by control of a 3-bit binary address. The dual, 4-channel MAX339 is designed to connect one of four inputs to a common output by control of a 2-bit binary address. Both devices can be used as either a mux or a demux. On-resistance is $400 \Omega$ max, and the devices conduct current equally well in both directions.
These muxes feature extremely low off leakages (less than 20 pA at $+25^{\circ} \mathrm{C}$ ), and extremely low on-channel leakages (less than 50 pA at $+25^{\circ} \mathrm{C}$ ). The new design offers guaranteed low charge injection ( 1.5 pC typ) and electrostatic discharge (ESD) protection greater than 2000 V , per method 3015.7. These improved muxes are pin-compatible upgrades for the industry-standard DG508A and DG509A. For similar Maxim devices with lower leakage and charge injection but higher on-resistance, see the MAX328 and MAX329.
The MAX338/MAX339 operate from a single +4.5 V to +30 V supply or from dual supplies of $\pm 4.5 \mathrm{~V}$ to $\pm 20 \mathrm{~V}$. All control inputs (whether address or enable) are TTL compatible ( +0.8 V to +2.4 V ) over the full specified temperature range and over the $\pm 4.5 \mathrm{~V}$ to $\pm 18 \mathrm{~V}$ supply range. These parts are fabricated with Maxim's 44V silicon-gate process.

## Applications

- Data-Acquisition Systems
- Sample-and-Hold Circuits
- Test Equipment
- Heads-Up Displays
- Military Radios
- Communications Systems
- Guidance and Control Systems

## Features

- On-Resistance, $<400 \Omega$ max
- Transition Time, $<500 \mathrm{~ns}$
- On-Resistance Match, <10
- NO-Off Leakage Current, $<20 \mathrm{pA}$ at $+25^{\circ} \mathrm{C}$
- 1.5 pC Charge Injection
- Single-Supply Operation $(+4.5 \mathrm{~V}$ to +30 V ) Bipolar-Supply Operation ( $\pm 4.5 \mathrm{~V}$ to $\pm 20 \mathrm{~V}$ )
- Plug-In Upgrade for Industry-Standard DG508A/DG509A
- Rail-to-Rail Signal Handling
- TTL/CMOS-Logic Compatible
- ESD Protection >2000V, per Method 3015.7

Note 1: Signals on NO, COM, EN, A0, A1, or A2 exceeding V+ or V- are clamped by internal diodes. Limit forward current to maximum current ratings.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Applications Information

## Operation with

## Supply Voltages Other than 15V

Using supply voltages less than $\pm 15 \mathrm{~V}$ will reduce the analog signal range. The MAX338/MAX339 switches operate with $\pm 4.5 \mathrm{~V}$ to $\pm 20 \mathrm{~V}$ bipolar supplies or with a +4.5 V to +30 V single supply. Connect V - to GND when operating with a single supply. Both device types can also operate with unbalanced supplies such as +24 V and -5 V . The Typical Operating Characteristics graphs show typical on-resistance with $20 \mathrm{~V}, 15 \mathrm{~V}, 10 \mathrm{~V}$, and 5 V supplies. (Switching times increase by a factor of two or more for operation at 5 V .)

## Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence $\mathrm{V}+$ on first, then V -, followed by the logic inputs NO and COM. If power-supply sequencing is not possible, add two small signal diodes in series with supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range to 1 V below $\mathrm{V}+$ and 1 V above V-, but does not affect the devices' low switch resistance and low leakage characteristics. Device operation is unchanged, and the difference between $V+$ and $V$ - should not exceed 44 V .

| MAX339MSE/PR3+ | $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ | 16 Narrow SO |

*Contact factory for dice specifications.
**EP = Exposed Pad
***Contact factory for availability.
+Denotes a lead(Pb)-free/RoHS-compliant package.

## Package Information

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a "+", "\#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE TYPE | PACKAGE CODE | OUTLINE NO. | LAND PATTERN NO. |
| :---: | :---: | :---: | :---: |
| 16 PDIP | $\mathrm{P} 16+1$ | $\underline{21-0043}$ | - |
| 16 Narrow SO | $\mathrm{S} 16+1$ | $\underline{21-0041}$ | $\underline{90-0097}$ |
| 16 QSOP | $\mathrm{E} 16+5$ | $\underline{21-0055}$ | $\underline{90-0167}$ |
| 16 TQFN-EP | $\mathrm{T} 1655+3$ | $\underline{21-0140}$ | $\underline{90-0073}$ |
| 16 CDIP | $\mathrm{J} 16+4$ | $\underline{21-0045}$ | - |

## Revision History

| REVISION <br> NUMBER | REVISION <br> DATE | DESCRIPTION | PAGES <br> CHANGED |
| :---: | :---: | :--- | :---: |
| 4 | $4 / 12$ | Added the MAX338CEE+ / MAX338EEE+/ MAX338MSE /PR3 / MAX339CEE+ / <br> MAX339EEE+ part and packaging information | $1,2,6,10,11$ |
| 5 | $10 / 17$ | Updated Ordering Information table | 11 |
| 6 | $5 / 19$ | Updated Electrical Characteristics table | 3,4 |
